29316. Re: More on the NASA route

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-13 04:46:40 UTC
From: Tracey W. Singleton
Topic: 29297 Message: 29316

Not only ice, but even rain. Even though the tiles are tough, one of the first flights back from Edwards to Kennedy encountered heavy rain and it eroded the tiles incurring millions of dollars of damage that had to be repair. Now we know why they avoid landing in California like the plague. It's a wx planning nightmare. Hitting raindrops at 397 knots is like flying through sandpaper.

From: Chris Easley
Topic: 29313 Message: 29317

Here's another freq to add to Dan's list. Just checked
RadioReference and evidently Alvarado FD is now using
a new frequency for their dispatch.

That freq is: 154.0925 DCS 051

Their old dispatch freq of 154.445 PL 173.8 is now
listed as their OPS channel.

I was wondering why I wasn't hearing anything on their old
dispatch channel, now I know.

Thanks again for the list Dan!!

29318. Re: jo co freq hot off the press

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-13 19:38:20 UTC
From: nd5y@yahoo.com
Topic: 29313 Message: 29318

Something ain't right.

According to the RR page http://www.radioreference.com/apps/db/?ctid=2648
There are two different repeaters with the same input:
Alvarado 154.0925/158.8425
Johnson County 154.295/158.8425
And Grandview has a repeater that is the exact opposite of Alvarado's:
158.8425/154.0925

What's up with all that?

Tom

29319. Re: jo co freq hot off the press

From: Chris Easley
Topic: 29313 Message: 29319

For one thing Alvarado and Johnson County are using
separate DPL tones.

Alvarado is using DPL 051 and JoCo is using DPL 116.

With the the new lineup of VHF freqs in the county it looks
to me like they have changed the setup for the repeater
in Grandview. Now that the county is entirely VHF and
46.100 is gone, their is no need to use 158.8425 as a
cross-band repeater. More than likely their just making
use of those freqs, since they still have a license for them.

The info on RadioReference needs to updated. Basically the 3
references to 'cross-band repeater' need to be removed, as
they are no longer used in that capacity.

Hope this clears it up.

Chris

Yeah, somehow I don't think we'd be hearing the
same amount of scanner traffic on the DPD Patrol,
SWAT and Deployment channels for a Kenny G
concert at Smirnoff....:)

Most of the paid subscriptions have auto refresh and are pretty much on time with the radar scan. I use Weather Tap also. Most of the internet radars you pretty much have to refresh yourself, but the NWS Radars are pretty much on time. Remember, know matter what software you use, or what website you looking at, pretty much all the feeds come from the same site, whether its NWS, or Weather Tap. Some media stations have their own radar sites.

If you go to my radar page, Ive listed some of the good radar sites to go to, and listed some of the bad ones.

http://www.geocities.com/kc5rhb/radar_sites

Hope this helps,

David, KC5RHB

29341. Major accident I-20 westbound at Collins

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-20 01:53:57 UTC
From: Jason
Topic: 29341 Message: 29341

Arlington is working a major accident that has I-20 westbound shut down at Collins.

After lots of radio traffic, unit 402 came on the air and informed dispatch he was now the incident commander, he was taking charge of the incident.

He then ordered all units to minimize radio traffic.

I've heard a couple of instances of "three times", and the dispatcher has said she will notify Grand Prairie (presumably of the freeway closure).

29342. Southwest Regional MPT1327

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-21 03:52:49 UTC
From: jeffkbeck
Topic: 29342 Message: 29342

For those that might be interested, I've been tinkering with TrunkView on the new Southwest Regional MPT1327 system. I've been able to confirm Cedar Hill and Desoto site information. I have not heard anything other than police traffic, and it appears that most of the traffic is focused in Desoto. However, the sites seem to be simulcasting.

Desoto
Site ID 0D91
Base Frequency 449.9875
Step 12.5

Channel # and Frequency
270 453.3625
272 453.3875
282 453.5215
288 453.5875
302 453.7625 (currently the control channel as well)

Cedar Hill
Site ID 0D99
Base Frequency 454.9875
Step 12.5

Channel # and Frequency
404 460.0375
414 460.1625
420 460.2375
426 460.3125
438 460.4625 (currently the control channel as well)

Group 002 seems to be the PD group.
Radio ID 614 appears to be the dispatch console.
ID 2005 appears to be the ID for the PD primary.

Once I figured out how to set the sites and profiles correctly in Trunkview, Trunkview has been working great in controlling my scanner and following the conversation.

It looks like this license has been around since 2005. It looks like
they updated the contact information and added site 4 and 5 to the
license. There is something interesting I noticed in the license for
the site 4 and 5, 463/468.9375 the emissions code is 7K60FXE which
means they will be using MotoTrbo radios but the other frequency in
this license, 451/456.2875 is still analog.

Not on news outlets Monday morning, I believe this to be from one of the tabletop exercises. Wolf Creek dam failure scenerio has been used in the past. Was the story picked up while monitoring a local group in DFW area?

29351. low band ops

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-22 18:52:17 UTC
From: Myles Barkman
Topic: 29351 Message: 29351

With all the changes to VHF-Hi band, UHF and 800, are there any users of VHF Low band anymore?
I see Parker County is trunked, much of Tarrant County is trunked, and now Johnson County has stopped using 46.100 MHz. Are the smaller cities still keeping low-band for tac channels or backup?
I need to clean out my low band stuff from my list if it is no longer used?
Are there some still using it for toning?

Catching up on some old unread emails. Just thought I would add that Houston FD still calls 463.000 MHz channel "Telemetry", even though they don't transmit that over the air now. It is simply used to get hospital diversion status, and channel assignments to speak to the ER with patient info.

29353. Garland Incident on 66 at Dairy last night.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-23 13:00:27 UTC
From: Chance Lindsey
Topic: 29353 Message: 29353

Does anyone have any details on the Garland incident last night on Route 66 at Dairy Rd? It ended at 12:17 am with the suspect shooting himself when police were about to move into for a gas attack. I didn't catch it from the beginning, so I had first thought that the suspect was the shooter wanted in the two Garland murders. But after listening to the news this morning, that suspect is still at large.

People often ask why I listen to scanners. Last night was a perfect example. To me this "action packed" unscripted, unedited and uncensored listening beats any TV watching. Real lives are at stake and things can go bad at a moment's notice. The command post, sniper officers, armored vehicle and Air 1 are all incredible to listen to. The suspect was continuously became unresponsive (presumably slipping in and out of consciousness) several times and Air 1 was feeding the ground crew details from thermal IR imaging to determine if the guy in the vehicle was alive by seeing the amount of heat from his head. It sounded like Garland did a great job last night handling the situation.

I was excited at 12:17 when he shot himself, because I thought he was a killer. Instead this was probably just some depressed schmuck who decided he couldn't handle his horrible pathetic life this Christmas with the "sluggish economy', yadee, yadee ..

You're not the only one. That's a good illustration of the challenge of hardcore scanning. Finding and receiving the transmissions is only half the battle. Accurately interpreting that information and putting it all together is what makes the hobby an intellectual challenge, and so appealing.

Don't feel bad. The media initially jumped the gun as well. CBS11 website had a quick blurb about a a gunman being cornered late last night -- it was on their site for a few minutes, then disappeared.

Chance, here's the press release. By the way DPD Air-1 was out there early on but it was DPS 101 that stayed over the deal. We had a whole cheering section out there since they too thought it was the freeway shooter. Garland did do a good job and unlike Arlington they know how to use an armored vehicle to stop an escape!

Garland Police received information from Keller Texas Police Department that they had warrants for Robbery and Burglary on 37 year old Brian Smith. They informed Garland Police that Smith was possibly somewhere near the central part of Garland driving a dark colored Honda CRV. Keller PD also believed that Smith had a gun with him, was suicidal and stated he was a former Utah State Trooper.
A Garland Officer spotted the Honda stopped in the roadway on State Highway 66 at Commerce Street with Smith sitting inside shortly after 9:00 pm. Brain Smith did not respond to any of the officer's commands and the SWAT Team was activated to take Smith into custody.
Shortly after 12:00 am, and still not responding to the police efforts to contact him, Smith started to leave by placing the vehicle in gear and driving forward. Police stopped the vehicle by pulling a vehicle in front of the car and another to the rear. The SWAT team started moving when a gunshot was heard from inside Smith's vehicle. When officers got to Smith they found what appeared to be a self-inflicted gunshot wound. Garland Fire Paramedics were on standby at the scene and transported Smith to Parkland Hospital where he is in critical condition.

Someone else chime in and correct me, but
I believe low-band is a moot point now in
North Texas, or at least DFW Metro.

Expect for those that are occasionally into
low band skip (and military stuff) still floating
around (like me), there ain't much at all.

29362. Fire Station Christmas talk

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-24 22:15:32 UTC
From: Bob Tickner
Topic: 29362 Message: 29362

Listening to the Denton Trunk system this morning right before noon, I heard the Denton Fire Dispatcher call for Engine 2. Upon Engine 2 answering, the Dispatcher ask them if there as anyone at their house? Engine 2 responded they did not think so and they were not sure what the status of Medic 2 was.
The Dispatcher then told them there was a lady at the station with a complete Christmas Dinner for the station.
After some blank air time, Engine 6 responded to the Dispatcher they were available to respond to that! :-)
Then very quickly, Medic 2 chimed in they were on there way home and would be there shortly.

I am sure at least Denton Station 2 is eating well on Christmas Eve. I hope all the stations in the DFW Metroplex have a calm night and get to enjoy a meal at their home station tonight.

Merry Christmas to all on DFWScan list.

I asked this same question a few months back, and the Johnson County was pretty much the lone hold-out at that time. I think the Red Cross stopped their lo band ops in FW years ago. So yes, this does appear to be the end of the line for lo band in DFW.

Reminds me of growing up in Atlanta
and listening to Atlanta FD. When the
clock struck midnight on Xmas eve
one year, someone decided it was
time to "Ho, Ho, Ho" on and off for
about 3 minutes on the dispatch
channel!!! I assume that Chris
Kringle was responsible, and had
assumed Priority 1 status on
a Code 3 response to a chimney!!!
Or... it could have been he was giving
out gifts to three hookers on
Peachtree Street!

Merry Xmas all! heh, heh....:)

This morning (Christmas day, everything else should be closed) I caught a couple brief transmissions on 462.175 PL 123.0.
A unit was real noisy and a female dispatcher said "Still unable to copy, try public service." It didn't sound like a typical business communication.

They have had this frequency licensed for several years
http://www.radioreference.com/apps/db/?cs=WPOX387
but even when I lived in the HEB area I never heard anything on it, except for the LTR systems that also use it.

I thought it might be CareFlite since it had the same PL as what they use on 464.100.

Somebody in the DFW area that can hear it all the time needs to confirm it.

Tom & Group,

I have been hearing the same traffic. CareFlite Ground
here in Johnson County is currently using that freq.

They have been having problems with the LTR system
down here. I stumbled across them last night while
scanning the 460 band.

Chris

I believe that is the new Ellis county freq. You will probably hear M811 on
that.

Hi Tom & Group,

Thanks for the confirmation on 462.175 Tom. Back a few years ago I heard CareFlite on this frequency and the traffic was related to a LifeStar or Life Flight helicopter that had crashed in Wise County (I believe it was Wise...maybe Jack, Wichita, etc). After that event, I heard it used a few times at what I believe were the CareFlite ground ambulances that work the Mesquite Rodeo.

I've been hearing CareFlite Ground in Johnson County toning out and dispatching calls on 464.1 (CERN) over the last week or two. I thought I was getting some skip at first but I realized what it was once I heard Lilian and a few other cities mentioned in the calls going out. I've checked with someone who would be in the know a few days ago about the use of the CERN frequency in Johnson County, but as of this time, I haven't received a reply.

Thanks for the post Tom...

So Ellis County uses the 800's numbers then. Thanks for that information Bob. I was hearing the 900's numbers on 464.1/PL 123.0 (CERN), which if I'm correct, are the Johnson County Ground guys.

I sure wish we'd get a lot more Passport users going back to the ole reliable conventional frequencies :)

Ellis county only has one unit which serves ESD # 5 which is Ferris.
Ferris still runs the city calls when not tied up on calls. Careflite
Medic 811 runs all the calls in the county.

CERN gets used as a backup. The system has been messed up lately and we've been bouncing around a whole bunch. They have it "fixed" but you still have to repeat yourself to dispatch 3 times before they get it. Funny that it seems to be a one way issue as we hear them just fine and they start getting touchy with you if you don't respond as soon as they unkey their mike. It isn't all of them though. It just seems to be a select few who are that way. The couple of guys that are regulars here will probably know exactly who I'm referring to. And I hope you guys know that I'm not referring to you(Big D and Robert). I don't have the current freq in front of me or know it off the top of my head but we're back on a freq we were on several months ago with a different talk group. If I remember right it is 1-04-??.

29375. recommended scanner for Mckinney area -Uniden 396T or GRE PSR-500?

Yahoo group: dfwscan (2008 — 2009)

I am new to scanning and bought a unident 246 & returned it after 1 day for 2 reasons: it only picked up one frequency - from CA!. Nothing from TX or DFW would come in from the factory programming. It was very hard for me to program or understand how to use.

I would like your opinions if I should buy a digital unit & the best one for ease of use & programming. My wife wants one mainly to listen to the severe weather alerts. She doesn't want a NOAA radio since all it does is sound an alert then play a recorded warning. She wants to be able to get the weather alert, then be able to tune to the FD or PD or some frequency to determine where the severe weather is, in relation to where we live. A portable unit is preferred for use when the power is out. We were wondering of the Unident 396T is better than the GRE PSR-500. Any other suggestions are appreciated. Thank you for your assistance.

See my answer to your post over on Radio Reference:
http://www.radioreference.com/forums/showpost.php?p=958528&postcount=3

At this point, you do not "have" to go digital, for the majority of
the DFW metro area. The 246, or another analog trunk tracking scanner
will work fine. The exceptions are:
Grand Prairie (mixed mode system, police & fire groups are digital)
Mansfield (same as Grand Prairie, police & fire talkgroups are digital)
TX DPS (the troopers on the tollways are still analog, so a 246 or
similar would work; everything else is digital)
DFW Airport (it's mostly Provoice, nothing works for that)
The new Frisco digital system (not in full operation yet, they're
still on Plano's analog system for now).
The factory programming on the 246 may be the same as what was in my
246 when I got it 4+ years ago. Outdated & incomplete. I still use my
246 to monitor a number of local systems,

I suspect you'll see other departments go digital over the next few
years, as funding is obtained, equipment is purchased, etc, but that
is likely to be several years off. It takes time to obtain & set up
new repeaters, program & install mobiles & dispatch consoles. If you
want to go ahead & make your move to a digital scanner, & be ahead of
the curve, either the Uniden BCD396T or GRE PSR-500 are good handheld
units. (Note that the Pro-106, sold at Radio Shack, is electronically
the same as the PSR-500. The difference is in the front panel layout.)

There are multiple comparison threads between the 396 & PSR-500 on Radio Reference, with many of the comments boiling down more to personal preference than a true 'which is better' (in my opinion). I prefer the size, display, & memory arrangement of the 396, but that's my preference. The 500 is more sensitive, but in my experience, it can be too sensitive, if you are too near cell towers or other transmitters. This can make it overload, & in effect, it hears less than the 396. I find my 500 does better, in the city, with it's stock antenna, instead of a gain type antenna like I use on my 396. At home, I can hear the same systems, on both scanners. Both have some features the other does not, or does something a little better than the other. Either will cover all the currently scannable local systems, and the most likely upgrades or changes, for several years to come.

The PSR-500 does have NAC code capability, which the 396 does not. This lets you enter the code, for digital, but conventional (not trunked) frequencies, such as Tx DPS, and separate the various stations that are using the same frequency. It also lets you use a lower squelch setting. The 396, without that feature, picks up all stations using the frequency (DPS uses the same set of frequencies, repeatedly, all over the region & state, with different NAC codes for each station or mobile repeater within a given area). Also, you have to set the 396, without a code, so it may get other stations, transmitting analog (not digital) on the same frequency. The new Uniden BCD396XT, due to be released the first quarter of next year, will have NAC capability, but it's still a month or two (or maybe three) away from being on the market.

The 396 averages around $500 from multiple online dealers. Comes with ac adapter, rechargeable batteries, pc cable, wrist strap, antenna. Uniden offers their programming software as a free download. There are also other choices, including two freeware programs, BC Tool (which does logging/recording in addition to programming) and Free Scan. Other programming packages are available for varying prices.

The PSR-500 is 'on sale' right now, I believe till 1-15-09, for $449.99, from multiple online dealers. Regular price is $499.99. Comes with ac adapter, two battery holders (one for alkaline batteries, one for rechargeables), pc cable, antenna,and a cd-rom with the manual (in a pdf file), along with a basic pc control/backup program & the drivers for the cable. No freeware software that I've heard of. Software packages: WIN500, PSREdit-500, & ARC500. A new version of ScanControl has just been released that works with this scanner.

The Radio Shack Pro-106 is back at it's regular price, $499.99. A few days ago, it was on sale, for the second time in two months, at $299.99. Radio Shack includes a printed manual in their version, but does not include the pc cable ($32) or ac adapter (another $20+) that cones with the 500.

If, instead of a handheld, you also are considering a base/mobile unit, the equivalent units are:

Uniden- BCD996T
GRE- PSR-600
Radio Shack- Pro-197

Like others have posted, it's all a matter of
personal preference considering all the
bells and whistles of the Uniden 396 or
PSR-500. I personally love my GRE. Very
nice radio. Love the NAC capability for
decode and search. Works perfectly in
that regard for DPS and the federal users
that have gone digital. Does it have more
than what I really need?. Yes, in many regards
it does. I would say I (at present) only use
maybe 20% of the total capacity and extras
of this radio. But my feeling is "more is better"
(even if not used at the moment), especially
in the ever changing environment of radio
technology. It always best to already have a
"ready" radio for changes, rather than having
to sit back and listen to silence or that
aggravating buzzsaw just because you don't
have the proper radio for what you want to monitor.

Blaine

Sir, let me be frank, and perhaps save you a great deal of money. If you couldn't figure out how to use the Uniden 246T and only took it back to the store after only one day, I suggest and submit that purchasing the Uniden BCD396T or the GRE PSR-500 would be ill-advised. Both units are just as sophisticated as the 246, but with a lot more memory and features. If you and your wife really want to do with a scanner what you say you want to do, it will entail a great deal of study and practice in order to tap into the features of the radio you choose and make it do what you want it to do. And as you have found out and stated below, there is no such thing as a factory programmed frequency load that fits everyone's needs. The factory loads are great for beginners but are only a basis for further study and experimentation. Nearly everyone on this list, including myself, whom have been scanning for many years, are all still learning and constantly figuring out better ways to make our units work to our advantage. And thus the reason in part for this list. There is a significant learning curve that all of us had to overcome when the new dynamic memory system was introduced by Uniden, and then there was another learning curve we all had to straddle when GRE came out with the new object oriented scanning method in their new digital scanners. I fully encourage you and your wife to delve into this hobby with both feet, but it is like every other hobby, it will take a considerable amount of study. Gone are the days of inserting a crystal or punching in a frequency to listen to your local PD or FD. Should you choose to make the plunge into the hobby again, however, we will be standing by and willing to help all we can.

Mark

My take is that most trunking units are difficult to program without software, and most will not be terribly useful without programming.

I have found that the 246 plus some freeware like bctool or FreeSCAN (my personal favorite) is just about as easy as it gets. Their ability to auto-format freq/site/talkgroup info from the clipboard (ie, copied from a website) is a Giant Leap Forward. I am sure the commercial software does this too, but I am too cheap to find out.

I would think that someone that is not comfortable with programming trunking scanners might buy a subscription to RadioReference and let software import whole systems in one gulp. I understand this works, but again, too cheap to find out when there are free solutions out there. But it would be worth the money for someone that doesn't want to doodle around with it.

[BTW, after writing this email I loaded up RadioReference and Freescan; working at my normal pre-coffee rate it took less than three minutes to find McKinney at RR, set up the McKinney trunked site, the four main groups (PD, FD, Public Service, and Princeton) with all the talkgroups, everything clearly labeled and organized, and saved to an external file. I'll upload it to the files section (if I can figure that out) in case it is of any use.]

Allen:

I replied to your post on RadioReference. The BC246T comes preprogrammed with a wide range of systems nationwide. There are instructions starting on page 116 explaining how to make the DFW area preprogrammed stuff more accessible (or whichever area you are wanting to receive). Additionally, there are extensive sets of programming for the scanner in the files section of this group.

You only need a digital scanner if you are interested in hearing one of the following DFW systems:

* Grand Prairie
* Mansfield
* Texas DPS
* DFW TSA

(There might be a few more, but those are the major ones.)

The files in the file section will also work on the BCD396T, but you will have to spend some time with the manual or other resources (see "Uniden Scanners for the New User") before you'll be able to get the most out of whatever you get.

Subject: [dfwscan] recommended scanner for Mckinney area -Uniden 396T or GRE PSR-500?

I am new to scanning and bought a unident 246 & returned it after 1 day for 2 reasons: it only picked up one frequency - from CA!. Nothing from TX or DFW would come in from the factory programming. It was very hard for me to program or understand how to use.

I would like your opinions if I should buy a digital unit & the best one for ease of use & programming. My wife wants one mainly to listen to the severe weather alerts. She doesn't want a NOAA radio since all it does is sound an alert then play a recorded warning. She wants to be able to get the weather alert, then be able to tune to the FD or PD or some frequency to determine where the severe weather is, in relation to where we live. A portable unit is preferred for use when the power is out. We were wondering of the Unident 396T is better than the GRE PSR-500. Any other suggestions are appreciated. Thank you for your assistance.

Allen:

I replied to your post on RadioReference. The BC246T comes preprogrammed with a wide range of systems nationwide. There are instructions starting on page 116 explaining how to make the DFW area preprogrammed stuff more accessible (or whichever area you are wanting to receive). Additionally, there are extensive sets of programming for the scanner in the files section of this group.

You only need a digital scanner if you are interested in hearing one of the following DFW systems:

* Grand Prairie
* Mansfield
* Texas DPS
* DFW TSA

(There might be a few more, but those are the major ones.)

The files in the file section will also work on the BCD396T, but you will have to spend some time with the manual or other resources (see "Uniden Scanners for the New User") before you'll be able to get the most out of whatever you get.

And for what it is worth, do not rely on listening to pd/fd for current weather information. Your best bet after receving a weather alert is to listen to the amateur radio frequencies for your area. The storm spotters are trained and know what to look for. They are in constant contact with the NWS. As a former pd/fd dispatcher, I can assure you that dispatchers are not trained as storm spotters, and are usually the last to know anything. The storm will be long gone before they decide to activate the emergency sirens or pass on weather bulletins received via tty. Remember, you are in "good ole boy" country, and there is a lot of bureacratic bs to wade through before anything gets done. Even in life/death situations.

I agree with Jason. It's very simple to
download systems from RR to your scanner,
even if it's just for sh**s and grins, just to
see what you can pick up.

Back when the tornado hit Fort Worth we were driving and heard the sirens. Turned on the scanner and the NWS wasn't really saying anything specific. Switched over to the weather net and put the car radio on WBAP. Got more info in a timely manner and found out where not to be.

Yep. I heard "Tornado on the ground, Arch Adams and West 7th" on 146.94 MHz (the Tarrant County RACES/SkyWarn frequency). Had everyone on our floor of Tandy Center into the stairwells before the WX alert went off (by then, the tornado was basically on top of Tandy Center).

If just for severe weather tracking, the BC370CRS work great. It will trigger an alert from NOAA or, if you leave it on an FM or AM station when you turn it off, it will trigger if an EAS alert goes out over the broadcast station. Then you can switch it over to scan mode to listen to the weather spotters report the live conditions to the weather service.

I did have an experience during one of the bad weather events during the past year that contrasted with Mr. Singleton's thoughts below. As the weather deteriorated in Dallas, I began by listening to the RACES reports, but I found more specific information by listening to Dallas PD.

The RACES reports are limited by the locations of their observers; most tend to be at or near their home in mostly mid- and upper-income neighborhoods, with a few out in their vehicles. The Dallas PD units were all over town giving reports to their respective dispatchers that included street intersections.

I don't really see the contrast. Most cops and firefighters don't know
their wall cloud from scud.

Any report from them should be taken with a huge grain of salt.

901 and 906 are Johnson County medic units. Although you may already know that.

I sure wish they would get back on the LTR system. Reception on 462.175 is spotty down here. At least from my observation. While over at my mom & dad's house in Keene this evening, I could hear CareFlite real well. The reception wasn't as good once I got back into Cleburne. I can barely pick them up on my base scanner.

I surprised they aren't using 463.200. They had used that once before as a back-up, and to the best of my recollection, reception was way better. I sure hope the medics are having better luck than I am.

Chris

From: kerr-chris3
Topic: 29374 Message: 29393

If you are interested in the AMR frequencies for Collin county and hunt county they are as followed:
Collin county AMR frequency
453.07500
On that you will hear AMR Anna (901), Princeton (902), Farmersville (903), and Josephine (905)

The hunt County frequency is:
154.09250

That dispatches hunt county ems which is AMR and also many of the fire departments.

29394. Re: [dfwscan] Re: Scanning AMR, Prosper?

From: Bob Tickner
Topic: 29394 Message: 29394

I am interested in what frequencies and systems the Town of Prosper in Collin County uses. I see on Radioreference there are 3 talkgroups on the Plano TRS System and one Fire talkgroup on the Collin County TRS system. Are there others, city services, ambulance services, ham repeaters, school district that I may have over looked?
Thanks for any input.

Subject: [dfwscan] Southwest Regional MPT1327

For those that might be interested, I've been tinkering with TrunkView on the new Southwest Regional MPT1327 system. I've been able to confirm Cedar Hill and Desoto site information. I have not heard anything other than police traffic, and it appears that most of the traffic is focused in Desoto. However, the sites seem to be simulcasting.

Desoto
Site ID 0D91
Base Frequency 449.9875
Step 12.5

Channel # and Frequency
270 453.3625
272 453.3875
282 453.5215
288 453.5875
302 453.7625 (currently the control channel as well)

Cedar Hill
Site ID 0D99
Base Frequency 454.9875
Step 12.5

Channel # and Frequency
404 460.0375
414 460.1625
420 460.2375
426 460.3125
438 460.4625 (currently the control channel as well)

Group 002 seems to be the PD group.
Radio ID 614 appears to be the dispatch console.
ID 2005 appears to be the ID for the PD primary.

Once I figured out how to set the sites and profiles correctly in Trunkview, Trunkview has been working great in controlling my scanner

and following the conversation.

From: Sarge
Topic: 29400 Message: 29400

As a new amateur, KE5YPB, I find that ham equipment is just as expensive as scanning equipment. I need a wall wart capable of charging 6 rechargeable AA batteries at once. Someone give me the volts and milliamps that I need in a wall wart to charge these batteries in 12 hours or less.

Thanks, Sarge

Why not save yourself some trouble and just go to your local big box store and buy a battery charger? Some can charge in as little as 15 minutes. Otherwise you would need to build a charging circuit to go along with that wall wart.

From: Blaine Brooks
Topic: 29403 Message: 29403

Hi all -

Can anyone confirm any of these
as actually being in operation at the
present time?

151.07750 173.8 TXDOT DECATUR 151.09250 173.8 TXDOT
GREENVILLE/N COLLIN CO
151.100 173.8 TXDOT EULESS/MID CITIES
159.165 TXDOT GAINESVILLE

Also, Tom ND5Y, I believe you had confirmed
151.055 as TXDOT truck to truck in Palo
Pinto and Parker County. However, to this day
I have never heard a peep while mobile or
base throughout Dallas, Tarrant, Collin, or
Denton counties.

Lastly, has anyone heard any recent activity on
the Corsicana radar site frequency of 162.150
PL 103.5?

From: S S
Topic: 29404 Message: 29404

I'm here in Murphy and would think that I would have no problems hearing Wylie, as Dallas is a piece of cake. My radio is a PSR-500 with the Radio Shack telescoping antenna. I programmed the system frequencies into the proper "channel slots", turned on the LTR auto-place option, and added a wildcard talkgroup so that I would catch any/all activity. Any attenuation is turned off. Unfortunately, I rarely anything at break the squelch. Any suggestions would be appreciated.

I am listening to the Wylie LTR system right now from Sachse with no problems. The system can be pretty silent sometimes, but right now there is a medical call and disturbance working, so both PD and FD channels are active. Sorry, I don't have a PSR-500 to help further.

I am using the information from
http://www.radioreference.com/apps/db/?sid=4649

I think, IMHO, that you should try reading the post before replying to it.

One would assume that he is attemping to listen to Wylie PD/FD, since they’re probably the only LTR system in Wylie proper.

He’s already stated he’s using a PSR-500 with the telescoping antenna.

Hmm, I guess I'll remove the system from the radio and re-program it
back in, but I'm pretty sure I've done that at least twice before. I,
too, am using the info off of Radio Reference. Hopefully, someone with
a PSR-500 will be able to chime in and let me know what I've screwed up.

Thanks for the replies.

Hello again Group!
This was just a little test to see if ANYONE was paying attention.....
:-}!
No need to get excited.....
Lots to listen to in Wylie besides LTR....some of us may not even know
the "meanings/functions" of what "channel slots", "auto-place option",
and "wildcard talkgroup"..... Part of DFWSCAN's existance is to help
others use their radios.....I use my PSR-500 to listen to Wylie's local
lawn-mower companies,(non-LTR)talk about where the long grass is
growing..... <G>
Happy Listening!
Charlie

Shooting at the GAS PIPE, a headshop near the 18000 block of Marsh Lane. Two BMAs wearing dark clothing with masks, one with a yellow bandana, busted in and shot up the place. Apparently there were ten people in the shop at the time and five got hit, one expired at the scene. There was very little info. on the perps initially, and a motive was not broadcasted. Could it have been a robbery? Or was there another motive involved? Hmmmhhh, a head shop that sells drug paraphernalia..certainly wouldn't want to jump to any conclusions at this juncture. I'm certain the media will root out the entire story before the 5am show!!!

This incident came on the heels of a string of robberies of individuals in apartment parking lots by four BMAs along Dallas North Tollway. Starting around 6pm this evening Channel 2 had a sting of similar robberies (approximately 5) in the area of Audelia and Forest. Same MO and descriptions.

If you live in an apartment, have your head on a swivel as you walk to and from your ride in the parking lot, be very weary of seedy looking individuals just hangin round.

Mark

151.100 (173.8) Euless - ACTIVE but don't hear much traffic on it

151.0925 (167.9) Parker County - ACTIVE

151.0475 (unknown) MINERAL WELLS - ACTIVE

151.0775 (173.8) DECATUR - ACTIVE

151.0325 (173.8) GLEN ROSE - ACTIVE

151.055 (unknown) HILL COUNTY - ACTIVE

Havent heard any traffic on the Statewide VHF low bands yet, but we
havent had a major ice storm yet. According to the FCC these
frequencies are still ACTIVE with new licenses. You usually here the
sand trucks on these frequencies.

47.020 (TARRANT)
47.040
47.060
47.080
47.160
47.180
47.240
47.260
47.340

The next time we have a "major" ice situation, try to listen to all
above and see what traffic you hear.

Happy Scanning,

David, KC5RHB

This repeater is located at the TxDOT facility south of Gordon. The PL is 173.8. They don't use it very often.

Most of the TxDOT vehicles out here in the Mineral Wells area have both high band and low band antennas but I haven't heard anything on low band in a couple years.

From: Mark Colborn
Topic: 29417 Message: 29417

Perhaps a sign of the times, or an excuse to cut budgets, our area is losing our 3 most experienced local ENG pilots today. Channels 4, 5, & 11 are dropping their turbine helicopter ENG programs effective today. The 3 affected pilots have more than 40,000 hours of combined flight time. Ken Arnold, Hector Cavazos, and Scott Wallace are all looking for aviation employment. Their stations will be replacing them with Robinson R-44 helicopters operated by Sky Helicopters. Sky Helicopters has offices and hangers at Garland Heliport. I mention this because none of the stations as far as I've seen have announced any of this to their viewers and probably won't, and it will be interesting to listen in on the media channels to see how smoothly the transition goes.

To all of you on this list: Happy New Year. Let's hope for a upswing (or perception thereof) in our economy and wish those who are searching for a new career the best of luck in finding one.

Mark

Actually Mike, the R-44 is very stable and is faster than a Bell 206B3 Jet Ranger in cruise. Chip Waggoner rode in one for several months on a trial basis after the Metro Traffic contracted FOX 4 ship (Jet Ranger) went down near the Joe Pool Dam last year. He told me on the radio one day he really liked it. SKY Helicopters has equipped several R-44s with small HD broadcast quality gyro-stabilized camera systems (the exact specifications I'm not sure of) and their pictures should be nearly as good as what the bigger ships are able to take now. You might be thinking of the R-22, the small two-place training helicopter. The R-44 is a four seater with a bigger Lycoming av-gas burning engine.

The ones in Denton Co. that were assisting
with the FM 2499/FM 407 project all had
low, high band, and 800 pigtails.

Thanks for the frequency confirms
on TXDOT high band.

I used to have these programmed
in our studio scanners back when
I was doing traffic, but that was
over three years ago. Since that
time, I really haven't monitored
TXDOT that much (or what
little can be monitored).

The last time I heard any activity
on low band was around that time
as well.

From: Matthew
Topic: 29428 Message: 29428

I have a RCI-2950DX 10/11 meters transciever for sale. I have had the
radio for a number of years but barely use it anymore. Since I moved
to North Texas over two years ago it has just been collecting dust in
the closet. The radio works perfectly although the channel knob on
the radio is loose but still works. I am sure that the channel knob
looseness can be fixed but I haven't a clue how to go about fixing it.
If you are interested drop me a line in email for more information.
I am willing to take the best offer for it.

From: David Johnson
Topic: 29429 Message: 29429

Scannable talk in freq for this class will be 147.16

We are planning a beginner level (TECHNICIAN CLASS) ham radio
licensing class
for Feb 7/21 (two Saturdays) at Silver Creek Baptist Church in Azle.
Anyone interested, let me know!

RSVP requested.

Class times will be 8:30am to 5pm.
No charge for the class. Free parking.
Optional License Exam will be administered 3pm Feb 21 and costs $15.

Church Address:
151 Ruth Lane
Azle, Texas 76020

Directions:
Texas 199 to Azle
South on FM 730 towards Weatherford
Intersection of Ruth Lane just south of Flat Rock Road.

Bring:
1) Can-do attitude!
2) Texas Driver's License or similar government issued Photo ID (for
exam only)
3) Note-taking equipment (notepad, pencils)
4) Sack lunch, snacks, beverages

Want to study in advance?
Use any comination of the free or purchase study materials listed at
http://www.wc5c.org/HamRadio/Training/tabid/352/Default.aspx
that suits you, all optional.

Any questions let me know:

From: Rev. Fr. George Hoxie, S.T.L., D.D.
Topic: 29430 Message: 29430

Celina FD woke me up driving by the house this morning headed to intersection of CR 88 and Hwy2478 (Custer). Reported "car in the ditch". First called for Care Flight but quickly canceled from scene reporting a "Signal 27". They asked for the Med Examiner and help in extraction.

I can only assume signal 27 means the person was dead on scene. Is that correct? Anyone have a list of codes used out here in Collin County?

G

George, Signal 27 has been a deceased person in Dallas for many years. Some area fire departments, EMS and police departments use this even though it may not be an "official" code in their department. From bits of information I gathered (not confirmed) about this incident a passerby spotted a crashed car in the ditch of CR 88. Inside there was a deceased person.

Sorry, but unable to help you with an official list of codes up there.

Terry

How is the audio part of the digital television signal done?

Of course, until the end of analog television signals, the audio is a FM signal receivable by ordinary radios that can receive those frequencies.

Will the audio continue to be FM, or will it be incorporated into the digital video signal?

There is no separate audio carrier like in analog TV.
Everything is in one data stream, which can contain multiple video and audio channels.

29440. Battery holders

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-04 15:56:09 UTC
From: Sarge
Topic: 29440 Message: 29440

Why is it that there are 2 types of 4, AA battery holders? The black one and the yellow one look identical. Checking with a vom indicates both are the same. I don't understand why rechargeables need a separate type battery holder.

Thanks, Sarge

29441. RE: [dfwscan] Battery holders

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-04 15:59:25 UTC
From: tvsjr
Topic: 29440 Message: 29441

The alkaline holder won't allow the radio to charge the batteries when powered externally, since charging alkalines typically results in the batteries rupturing.

I suspect the owner's manual addresses this as well.

FREEZING RAIN ADVISORY LATE TONIGHT & INTO MON FOR PORTIONS OF NO. TX.

COLD AIR CENTERED OVER THE CNTL PLAINS WILL CONTINUE TO FILTER INTO NO. TX TONIGHT. OVERNIGHT TEMPS ARE EXPECTED TO FALL TO BELOW FREEZING GENERALLY ALONG & NW OF A GOLDTHWAITE TO PARIS LINE WITH READINGS IN THE UPPER 20S ACROSS FAR NW PARTS OF NO. TX. MOISTURE IS EXPECTED TO RAPIDLY INCREASE ACROSS THE REGION WITH AREAS OF LIGHT RAIN OR DRIZZLE DEVELOPING LATE TONIGHT. THERE IS STILL UNCERTAINTY AS TO HOW MUCH PRECIPITATION WILL DEVELOP & HOW FAR SO. THE FREEZING LINE WILL BE LOCATED. RECENT WARM WEATHER WILL MAKE IT DIFFICULT FOR GROUND TEMPS TO RAPIDLY COOL. AREAS GENERALLY ALONG AND NORTHWEST OF A GOLDTHWAITE TO PARIS LINE WILL HAVE THE GREATEST CHANCE FOR FREEZING PRECIPITATION LATE TONIGHT & INTO MONDAY.

VERY LIGHT ICE ACCUMULATIONS ARE POSSIBLE ON ELEVATED ROADS AND BRIDGES.

FREEZING RAIN ADVISORY IN EFFECT FROM 3 AM TO 12 PM CST MONDAY.

THE NATL WEATHER SVC IN FORT WORTH HAS ISSUED A FREEZING RAIN ADVISORY
FOR LIGHT ICING.WHICH IS IN EFFECT FROM 3 AM TO

12 PM CST MONDAY.

AREAS OF LIGHT DRIZZLE OR RAIN ARE EXPECTED TO DEVELOP OVER SOUTHWESTERN
PORTIONS OF NO. TX LATE TONIGHT. FREEZING RAIN WILL BE POSSIBLE AS TEMPS
DROP INTO THE UPPER 20S & LWR 30S. VERY LIGHT ICE ACCUMULATIONS ARE
POSSIBLE ON ELEVATED ROADS AND BRIDGES. THE FREEZING PRECIPITATION WILL
COME TO AN END BY NOON MON AS TEMPS RISE ABOVE FREEZING.

A FREEZING RAIN ADVISORY MEANS THAT PERIODS OF FREEZING RAIN OR FREEZING
DRIZZLE WILL CAUSE TRAVEL DIFFICULTIES. SLOW DOWN AND USE CAUTION WHILE
DRIVING. BRIDGES & OVERPASSES WILL BE THE FIRST PLACES THAT ICY SPOTS
WILL DEVELOP.

I'm sure by now someone has informed you of the obvious. There are three tabs in the radio which contact the battery holders. There are two tabs on the battery holders. Only one tab allows voltage to flow both ways, and only one allows voltage to flow from the batteries.

You have to do what you can to make the lawyers happy regarding exploding batteries.

They are both new. I messed with them for a few days, but never got the reaction tune cable. As you may know the Digital Scout frequency counter will instantly tune the reciever to whatever it picks up. I spent well over $1000 for both and a data cable to log frequencies to the laptop plus a few $65 antennae.... if your looking, I'm thinking of selling... contact me and we can work out a good deal

From: Terry
Topic: 29454 Message: 29454

For those that want to pay your respects, avoid the traffic of wonder what's happening on the radio here's the route. I believe they leave the Potter's House Church on Kiest about 2:35.

1. LEFT onto Kiest Blvd to Spur 408

2. LEFT onto Spur 408 merging right onto N/B Loop 12 (far right lane)

3. NB Loop 12 merging Right to N/B I-35E (far right lane)

4. NB I-35E to E/B I-635

5. E/B I-635 (1 lane left) exit to Greenville Ave Ramp (far right).

6. LEFT onto Greenville Ave to Last Northern Cemetery Entrance

7. LEFT turn into cemetery - follow Restland Cemetery Guide Vehicle

I am not aware of any receivers, much less scanners, that will receive just the audio portion of the Digital TV broadcast. With all of the new portable technology, like iPhones and other video enabled devices, I think the likelihood of a device to receive just the audio is really low because of market demand.

Perhaps over the next 5 to 10 years we will see more software enabled radio receivers. So if you wanted to decode Digital TV audio streams, you would just download a plug in to your radio. (http://en.wikipedia.org/wiki/Software_radio).

So my bet is your will see a portable mainstream consumer device that will receive both the audio and video long before any scanner is capable.

You could always pick up one of these:
http://www.radioshack.com/product/index.jsp?productId=2855063
Portable DTV. I went and picked one up and it works great.

When I'm out storm spotting I would sometimes listen to the TV channels on the scanner to hear what they were saying. I have an old analog 3 inch portable color TV, but it doesn't pick up real well. My scanner picks up the analog audio better than my old portable TV.

But the portable DTV picks up a great signal. Even with the build in antenna. I wish the screen was a tad smaller, but I'm not complaining. Its pretty cool, has a lot of features on it.

Date: 2009-01-10 02:52:56 UTC
From: commscan
Topic: 29458 Message: 29458

Hi Group,

Is anyone else noticing the problem with the public safety TRS in Fort Worth tonight (since about 8:15 PM through at least 8:50 PM, or now). There is a LOT of "interference" (for lack of a correct term) causing radio reception issues in the western part of Tarrant County for sure. The system sounds like it's about to shut down out west. The data channel is all messed up too.

I talked with a friend in the NE part of Tarrant County and they were not hearing the same thing. They had clean traffic. But after listening to FWPD's North & West Division TG's, I realize it's definitely a problem units are having too. Supposedly "the technical guys" are being called to fix it.

I'm just curious if anyone else is noticing the problem, and if so (or not), what general area you'd be monitoring from. My best guess is it is the western tower site with the very annoying problem.

Brian

Arlington Jail Ops are on 58256

Also, I caught "Station 33" HandiTran/City Transportation units on 56592 saying go to "6", and the conversation resumed on 57520.

57488 is listed as "land fill" on RR and my own site, but the traffic I'm hearing now, sounds like it's also a "Station 33" transportation channel.

Happy Scanning,

Ben

From: tajens2001
Topic: 29465 Message: 29465

I thought I heard Fort Worth engine 34 being dispatched this morning. Engine 41 move into their new station from the temporary station. Has the temporary station they were in been moved for engine 34?

29466. Re: [dfwscan] FWFD Engine 34?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-12 15:40:42 UTC
From: Greg Higgins
Topic: 29465 Message: 29466

The Fort Worth Fire Department opened Station 41, located at 11400 Willow Springs Road, on Jan 5th with E-41 and W-41.

On Jan 10, the "old, temporary Station 41" became the "new, temporary Station 34" with E-34. Their new station will not be completed until later this year / early next year, and will be located in the Sendra Ranch Addition.

On Jan 15th, Station 11, located at 1900 Texan Drive (just west of Texas Motor Speedway) will open with E-11.

That should bring everybody up to date.

Regards,
Greg Higgins

Anyone know if Lewisville has been having
problems lately with their trunked system
drifting into failsafe, especially in the
morning - early afternoon?. I have been
running Unitrunker lately, and its been
having the darnedest time locking
onto a control channel during this time.

Thanks Ben. Yeah, I don't know what the deal
is. Receiving control channels strong from
Carrollton, Denton Co., Denton City, and Plano
TRS's as of this time.

Still nothing on the Lewisville system on the
normal control channel frequencies that I can
hear.

From: Tom ND5Y
Topic: 29470 Message: 29470

A while back I noticed Fort Wolters Trainig Center here in Mineral Wells got a new tower with 2 antennas about the same time I quit hearing Range Control on 149.425. Today I found them on 149.225 PL 67.0 and 149.500 PL 67.0. Both appear to be simplex. The tower is only about 50' so they probably can't be heard much farther east than Weatherford.

Dang! Reception is loud and GOOD!
As others have stated and through
some private email, looks as though
techs have been working on some coverage
and antenna alignments the last few days.
What they did (at least for my reception)
has been awesome. Sounds as though they
might be on the Water Treatment Rd. tower
(which is pretty much across the highway
from me - more or less - I live off FM 407).
Anyway, as they used to say in the old CB
days "You're blowing my doors off!!"....
If there are any techs on the list, damn good
job guys (or gals). It's like the good ole
Rockbrook days!

From: Terry
Topic: 29475 Message: 29475

Press release regarding the new Ft Worth Fire Station 11

Terry

New Fire Station Opens near TMS

FORT WORTH, TEXAS - The Fort Worth Fire Department will open its newest fire station at

8:00 am, Thursday, January 15th . Fire Station #11 is located just off Highway 114 at 1900 Texan Drive (Mapsco 642P) and sits on the far western edge of the Northwest ISD educational complex on land offered and purchased from the ISD at fair market value.

The station will greatly lower the response times to emergency calls for the nearby Harriett Creek neighborhood, Texas Motor Speedway, the Northwest ISD, and other areas that continue to grow in this far northern portion of the City of Fort Worth. Previous to this station opening, the primary fire station for the area was Fire Station #35 located several miles away at 2201 Flight Line Road on the grounds of Alliance Airport (Mapsco 7Q).

Voters approved the $2.23 million cost of the state of the art facility as part of the 2004 Capital Improvement Package. Construction on the 9,750 square foot building (5,200' living quarters and 4,550' for fire apparatus) began in November of 2007 and features sleeping quarters for up to eight firefighters, housing for three fire apparatus, a workout facility with equipment for cardio and strength training, wireless Internet capabilities, private study quarters for promotional and continuing education. It is also a "green" facility with energy efficient appliances and heating and cooling provided via geothermal control systems.

The station will initially be staffed with one fire engine and four firefighters, which in reality equals 12 firefighters assigned to the station (4 FF's per each of the three 24 hour work shifts). As the area continues to grow, the fire department will constantly monitor the area to determine if any expansion of equipment and personnel will be needed.

NOTE: No official ceremony will take place on Thursday. A public open house and dedication is being planned for later in the spring.

"Old" station 11 is now referred to as the "AirShop" and still houses Utility 3, 4 and 5. All air pack maintenance is still done there. The only thing that changed was the name.

Hearing N5API this morning running a bunch
of crazy tones on the .92 repeater. Sounds
like a fire dispatch. What's this guy doing?
It's annoying. Keeps kerchunking the repeater.
Is he running some net control repeater tests
or something? Keeps saying "N5API controlling".

Also, Wild Bill of LAARK, is the 147.38 repeater
still in operation?

Thanks for the reply Jay. Just seemed weird
to hear that type of tone out on a ham repeater.
I assume this is for the SKYWARN stuff? Do the
ARES members receive this on their HT's, or do
they need a pager?

Bad wreck in Cleburne this evening. Two patients going by air.
Careflite 5 & Careflite 6 are en-route. A third helicopter
was put on standby but was canceled due to the third patient
being DOS.

The accident is on the service road to North bound US 67
where it intersects with North Main St.

Both aircraft are on the ground at this time.... 7:14 p.m.

Chris

With the former prez moving into Daria Place
in Preston Hollow, wonder what the new
security detail/CP frequency will be? or if
the local USSS office will just use their
primary of 164.650 NAC 001? Guess we
won't have too long to wait to figure it
out...:)

That'll be pretty interesting him and Laura
showing up around town...I could see
Laura hittin' the shops of Highland Park
Village...

Should also be interesting whether or
not a no-fly (P) zone will be implemented,
since it's right beside the Tollway, and
in the approach pattern for KADS.

Fun stuff ahead for monitors....

Hi Group,

Since last night, I've been getting traffic (non digital) on this frequency with the 023 PL tone indicated. It is clear enough to hear sometimes but either it is a frequency not being used much or I'm not receiving it most times. I only saw 2 State of Texas (I think one is a DPS) listings on the FCC database and they were both out of Austin. Other than this little bit of information, I have nothing else. Does anyone have any idea who the user may be? Thanks.

Brian

He is going to Midland on Tuesday....

Also...in the old days....when he was TUMBLER (pre Governor and pre POTUS and new call TRAILBLAZER)...they used X-RAY 167.900 Mhz for his detail....maybe that will be the working channel for his new detail.

I don't recollect what they used for Lady Bird...but I seem to remember it was BAKER...165.7875 Mhz.

So.....more to uncover.

FWIW - I have personally heard the following
active with the local USSS field office, when
a VIP has NOT been in town:

164.650 NAC 001 Tango
165.375 NAC 001 Charlie
167.900 NAC 001 Dallas X-Ray
164.400 NAC 001 Papa - never hear
any voice, just keyups

In other words, just their everyday stuff
and investigations, surveillance, etc.

Austin office was supposed to be on
165.2125. Not sure about Houston or
San Antonio.

I would assume that protec for former prez
Bush will just become a "routine" task
(much like Bush Sr, Clinton) once he
finally gets settled here. I'm sure that
the local USSS has all the associated
freqs programmed in their radios, but
they will more than likely only use one
main channel for his detail, and for all
we know, they could just use their primary
of Tango for convenience. It'll be interesting
the codename they'll call the Daria Place
residence.

News Media Information 202 / 418-0500

Internet: http://www.fcc.gov

TTY: 1-888-835-5322

DA 09-33

Released: January 14, 2009

WIRELESS TELECOMMUNICATIONS BUREAU REMINDS AVIATORS AND MARINERS

THAT SATELLITE MONITORING OF 121.5 MHz ALERTS WILL END FEBRUARY 1, 2009

The Wireless Telecommunications Bureau reminds users of emergency locator transmitters used

on aircraft (ELTs), and emergency position-indicating radio beacons used on ships (EPIRBs), that such

beacons operating on frequency 121.5 MHz will no longer be ☐heard☐ by search and rescue satellites as of

February 1, 2009. This change results from decision by the international organization overseeing the

satellite-based search and rescue system - COSPAS/SARSAT1 - that it will terminate satellite processing

of distress signals from 121.5 MHz ELTs and EPIRBs as of that date. Consequently, users of ELTs and

EPIRBs that send distress alerts on 121.5 MHz therefore must switch to beacons that operate at 406.0-

406.1 MHz (406 MHz) if the alerts are to be detected and relayed via satellite.

COSPAS-SARSAT is an international program established by Canada, France, Russia, and the

United States to operate a satellite-based search and rescue system. The COSPAS-SARSAT satellite

system uses satellites in low-earth and geostationary orbits to detect and locate aviators, mariners, and

land-based users in distress by tracking distress alerts on 121.5 MHz and 406 MHz. In 2000,

COSPAS/SARSAT announced plans to terminate satellite processing of distress signals from 121.5 MHz

emergency beacons on February 1, 2009, and urged users to switch to 406 MHz beacons. The

Commission has prohibited the use of 121.5 MHz EPIRBs on U.S.-registered vessels,2 and is considering

a proposal3 to prohibit the use of 121.5 MHz ELTs on U.S.-registered aircraft.4 In addition, the National

Oceanic and Atmospheric Administration (www.sarsat.noaa.gov), the U.S. Coast Guard

(http://www.uscg.mil/hq/cg5/cg534/), the U.S. Air Force (http://www.1af.acc.af.mil/units/afrcc/), and the

National Aeronautical and Space Administration (http://searchandrescue.gsfc.nasa.gov/), which

administer the COSPAS/SARSAT system in the United States, advise users of 121.5 MHz emergency

beacons to switch to 406 MHz beacons.

1 See www.cospas-sarsat.org.

2 See Amendment of Parts 13 and 80 of the Commission☐s Rules Concerning Maritime Communications, Report and

Order and Further Notice of Proposed Rule Making, WT Docket No. 00-48, 17 FCC Rcd 6741, 6761-62 ¶ 47

(2002).

3 See Review of Part 87 of the Commission☐s Rules Concerning the Aviation Radio Service, Second Report and

Order and Second Further Notice of Proposed Rule Making, WT Docket No. 01-289, 21 FCC Rcd 11582, 11608-09

¶ 43 (2006).

4 Aircraft that travel to Canada or Mexico must also be aware of those countries☐ requirements. Canada has

proposed to require any aircraft entering its airspace after February 1, 2009 to have a 406 MHz ELT installed on

board. As of July 1, 2008 all aircraft flying to Mexico must have a 406 MHz ELT although Mexico has agreed to

allow U.S.-registered aircraft to continue using existing 121.5 ELTs until July 1, 2009 or when the battery on the

existing 121.5 ELT is due to be replaced, whichever occurs first.

When disposing of an obsolete 121.5 MHz beacon, users must disable the beacon to prevent false

alerts by removing the batteries, which should be recycled or disposed of pursuant to local regulations.

The termination of satellite processing of 121.5 MHz signals does not mean the end of the use of

the frequency. Devices other than ELTs and EPIRBs (such as man-overboard systems and homing

transmitters) that operate on 121.5 MHz and do not rely on satellite detection will not be affected by the

phase-out. Nor will personal locator beacons (PLBs), which operate only on 406 MHz.

For further information, consult the websites noted above or contact Mr. Jim Shaffer, Mobility

Wireless Telecommunications Bureau, at (202) 418-0687, TTY (202) 414-1255, email

I was looking on Radio Reference and saw that Parker County has a custom frequency table. Does this need to be entered if the system is P25 exclusive? I always thought this table was only for systems that were all or part analog.

I can answer only for the BCD396T and BCD996T: These scanners automatically fill in the information based on the data in the control channel data stream. You don't need to do anything. (There are a few military systems that don't include the info in the data stream, and for those you have to manually enter the settings, but 99% of existing P25 systems don't need it.)

In the area so we drove by his new crib yesterday afternoon. The house and grounds need a lot of work before he moves in. Definitely a 1.2 million fixer-upper, purchased for neighborhood it's in. I figure they will be in Crawford for some time before they finally move to Dallas. Also they are talking about putting up a security fence around the front of the house. That will take a while. They are moving into a nice hood, and several neighbors have signs out welcoming them home!!! Mr. Cuban and Mr. Hicks are just a good golf swing up the street. The streets in the area by the way surprised us; they are in fairly bad repair, like streets in some south Dallas neighborhoods. Wonder if that will change in the near future also?!! Talked with some controllers at Love Tower recently; there will not be any type of special use airspace around the area.

Actually Hicks is literally in his backyard,
behind a grove of trees! And T. Boone
is a casual stroll south.

> The streets in the area by the way
> surprised us; they are in fairly bad repair

Gotta' love the parallels there. Houses
as big as hotels, yet crappy streets.
Yeah, we know where their money's
going, and it ain't to the city streets
department for improvements. Gotta'
buy that oil rig before I fix the pothole
in my cul-de-sac!

> Talked with some controllers at Love Tower recently; there will not be any

Very interesting. I'm pretty sure the Bush Sr.
compound in Maine still has a no-fly zone
around it.

Nothing special for Bush senior here in Houston. His neighborhood is gated with a security guard at the gate and my son has access anytime due to him being friends of one of the neighbors. Not a no-fly zone either. They travel the streets of Houston with their SS detail hardly noticeable. Forget the frequency used since it was used very seldom. May it was Baker - 165.7875

I remember something about the security gate when Bush moved in and don't remember if it was built with taxpayer money or the neighborhood paid for it. This is not like a security gate at a normal apartment complex, it's much more secure and nothing you can drive thru without stopping or follow someone else in.

Like most retired presidential housing the SS will have to have separate quarters for the 24 hr security detail and taxpayers will generally pay for the rental/purchase of those facilities. Clinton purchased a multi story building in New York and amazingly, the monthly rental for the SS facilities came out to be the same as the monthly payment for the building.......

29504. Government P25

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-21 04:21:18 UTC
From: Blaine Brooks
Topic: 29504 Message: 29504

Did some searching today using these great files
for my GRE-500:

http://www.radioreference.com/forums/
showthread.php?t=129817

Scroll down to use latest updated search files.
The cool thing is that they are already set up
to just search out digital P25 signals in the
fed bands.

So with the MONITOR and logging function, you
can set it to log when you leave in the morning
for work, and when you come home in the evening
you can see what federal UHF and VHF digital
signals were logged, as well as the NAC codes.
Pretty cool!

Here is what I logged today:

164.400 NAC001 supposed to be USSS Papa Channel
(I have never heard voice - only keyups)
163.625 NAC001 - ICE
163.700 NAC001 - ICE DALLAS 1 RPTR.
169.1625 NAC001 - TSA DFW Arpt.
166.675 didn't have a NAC code, but logged

I highly recommend those fed monitors out
there to try out these search files this guy has
set up. With our collective scanners searching,
who knows what little "gems" we'll find in the
new digital comms era....:)

And....the most important....don't be shy.....
please POST what you find!.......Thanks!

> a short tutorial to make this work?

Unzip the file(s). Then use Win500 to open them respectively.
Save them both as V-Folders. For example, I have the VHF file
in V-Folder 0, and the UHF in V-Folder 1. Upload them to the
scanner as a V-Folder just to have, OR you can just open the
file(s) in Win500, and tell the program to UPLOAD TO SCANNER.
Just make sure you SAVE your present file of frequencies you
NORMALLY scan, so it doesn't overwrite them. Simple as that.

You will NOT be able to search UHF & VHF AT THE SAME TIME.
It will either be one or the other. But overall it really doesn't matter.
Just like I said, with the MONITOR logger, you can set and leave
it to log VHF one day, and UHF the other. Come back home after
work, errands, etc. and VIOLA! ....frequencies catches and NAC
codes!

> Also, am getting a very garbled signal on 406.3375 NAC482 on a

> this p25 freq or can I tweak my PSR600 digital settings to correct it?

Welcome to the wonderful world of government digital
encryption! What you are hearing and decoding is the
great and powerful poobah of USPS Inspectors. The
NAC you decoded is correct, and that is their new
frequency for DFW ops. However, they are using
encryption almost 100% of the time. On a rarity,
you might hear them in the clear (as I did when
they were testing the radios), but now, you might
as well forget it. Still good to have in the LE scan
bank though, just in case.

From: Blaine Brooks
Topic: 29510 Message: 29510

In radio tests when it first came online, this
frequency was referred to as "Dallas 1 Repeater".
In searching for NAC codes, it has displayed a
NAC of 001, as well as 031. I can confirm, again
from radio tests, that at least one of the repeaters
is at Cedar Hill, with very wide coverage. It's like
a federal smartzone kind of thing too, because
when they were testing it, I remember listening
one evening and hearing an agent in Tyler talking
to an agent in Dallas just like they were right
next to each other, loud and very clear.

29514. Foreign Head of State

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-22 01:30:14 UTC
From: cashfd13tx
Topic: 29514 Message: 29514

I got to see a motorcade heading from Dallas to Paris today on I-30 at Bass Pro Dr. in Garland. Large amount of DPD motorcycles, squad cars, TX DPS, a DFR Rescue, and DPS 101 Helicopter following and giving traffic reports to lead car. Officers were closing off all entrance ramps on to I-30. I was just wondering if this was normal for a foreign Head of State. I don't recall who he is, but he came through Greenville last year for a doctors visit in Paris, TX. I know he was arab, but can't recall which country he represents. I also got to see them heading back to Dallas as they passed thru Greenville, but they seemed to have scaled back the escort by then, as there were only about 10 cars mostly DPS. I did notice a unmarked Tahoe that looked like DPD SWAT in it. I thought the DFR Rescue running Code-3 was a little out of the ordinary. Just not something we get to see out here in the sticks very often. I was wondering if USSS would be in charge of something as coordinated as this, so if they come back thru I can do a better job of montioring them.

TIA,

Doug

State Dept usually handles foreign heads. Search UHF fed range and likely P-25. They are usually simplex and try really hard to sound like USSS. Usually they don't get anywhere close! I suspect you heard most of the traffic. Always remember close-call when you see such a thing.

Found an article from our local paper from 2007 talking about it. Guess it was someone pretty important. I am sure it was the same person again.

Greenville Police Department Sergeant Steve Holman said Pakistani President Pervez Musharraf passed through Greenville around 9:40 a.m. on his way from Dallas to Paris, Texas. His then passed through Greenville again around 3:30 p.m. on his way back to Dallas.

Adding to Terry's comments....

USSD used to have a repeater here in DFW
on 409.625 (PL 151.4) CH 1 & 2, repeat and
direct.

I personally have not heard it used in ages.
In fact, the last time I heard it used was a visit
from Benjamin Netanyahu several years ago.

USSD Diplomatic Security in Washington DC
has made the transition to Astro. I would
assume that would eventually be the case
nationwide with the field offices. Here are
their frequencies in DC (courtesy of Capitol
Hill Monitors):

407.600
408.600
409.0375
409.7125

I personally have not heard any activity YET
on these frequencies.

29520. Sorry about the spam

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-23 00:07:43 UTC
From: Jason Simpkins
Topic: 29520 Message: 29520

I got an e-mail saying that my mother had signed up on this reunion thing. It said click if you know her. So I did and it asked me to sign up to keep in contact with her. All you had to do was enter your e-mail addy. I call my mom and said you signed up for Reunion.com. She said no I did not someone from church sent that to me. I said well you sent it to me. She said oh know you think that went out to everyone on my contact list. I said I hope not cause I answered it to cause I thought it was from you. Sure enough looks like everyone on my contact list got a message.

So, that is the story. Sorry, about that. I am just going to blame it on my mother. :)

Jason

29522. Updated P25 log

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-24 00:20:47 UTC
From: Blaine Brooks
Topic: 29522 Message: 29522

Over the last few days, this is just an update of
what I have logged VHF & UHF P25:

164.400 NAC001 / NAC013 / NAC031 USSS
169.1625 NAC001 / NAC013 TSA
163.625 NAC032 / NAC653 ICE
168.975 NAC038 ??
163.700 NAC031 / NAC001 ICE
172.900 NAC001 TSA
164.650 NAC001 USSS

165.2125 NAC001 USSS
170.725 NAC653 DOJ EAST
171.4375 NAC653 DOJ WEST

406.3375 NAC482 USPS INSP
407.725 NAC482 USPS INSP?
415.875 NAC293 / NAC482 BEP

Obviously there is MUCH more activity on VHF
than UHF, excluding a few digital UHF trunked
(like FWNASJRB).

Some of these it will lock on the frequency on
the GRE-500 and supposedly decode the NAC,
but no audio will come through, so go figure.

Also, I'm getting different NAC code hits for
frequencies. Can't determine if these are
different repeaters, inputs, or what. Anyone
know why that might happen?

A couple of new ones to track down for a
positive ID. 168.975 NAC038 & 407.725 NAC482.
Not sure if latter is USPS Inspectors or not.

I'm surprised that the GRE-500 does not have an
indicator for the type of transmission. I think
the Uniden models will show "LNK" for data
response type packets.

Probably a D-STAR repeater up there.
We have several here in the Houston area.
They are digital transmissions similar to P25 but not compatible.
There is no real "scanner" on the market that can decode D-STAR (yet).

Here is a webpage I found that talks about it.
http://www.dstarinfo.com/

Using the links, looks like you might be hearing the D-STAR repeater in
Denton on 147.450 MHz:
http://dcara.net/repeater.htm

So it looks like it is made by a man...

According to this,
http://wiki.radioreference.com/index.php/Common_Public_Safety,
it is a Nationwide Mutual Aid simplex channel.
Wonder if DPS units could be using it for car-car use.
Has anyone confirmed simplex DPS car-car on any other freqs?

The GRE does not have any indicator that
I can tell, but for me it's no big deal.

It's probably just a case of the scanner
picking up weak audio, decoding the NAC,
but not letting the audio pass through.
Digital signals are so fickle. They
have to have the correct signal strength to
decode. They won't become scratchy or
fade in and out like analog. You just end
up not hearing anything at all
sometimes! ...:) or you end up hearing
something that sounds like a drunk R2D2.

What I was trying to say is that those short
transmissions, which are less than a second,
are really data packets and not voice.
Your scanner is trying to output audio when
it shouldn't. (unless it was designed that way
as a method of letting the user know there is
activity on the channel). The NAC is sent for
all transmissions types, voice and data.

You would think that DPS would use one of their standard PL tones or
P25 mode. DCS isn't really DPS' thing. It must be an SO or PD.

Well, I don't think it was DPS really. This was an analog transmission and I don't think DPS is using any of the newer frequencies in any non P25 modes. I'm not 100% sure though.

I looked in Oklahoma too (via the FCC database) and even across the whole country and there are very, very few listings with this frequency at all. I believe there were two listings in Texas, none in Oklahoma, and maybe four or five in the whole country. I've finally locked 155.4825 out for a little while because it became too hard to copy. But there's definitely someone using the frequency and the next time we have some good skip/ducting, I'm going to try and figure out who it is :)

You would think that DPS would use one of their standard PL tones or P25 mode. DCS isn't really DPS' thing. It must be an SO or PD.

From: commscan
Topic: 29487 Message: 29536

This is what I get for reading e-mails backwards (latest to previous order) :) Thanks for the information Myles. I possibly heard some 155.475 P25 DPS car-to-car traffic about six months ago, but as with a few other P25 conventional users in N. Texas, they were just a little too far away to catch everything.

I've never really noticed DPS using 155.475 (even though it's a nationwide law enforcement channel) much other than out in West Texas during the late '90's. But I've been wondering the same thing? Has anyone been catching any P25 (or analog still) DPS simplex traffic. The CLE guys are still analog around here (Fort Worth) from what I've heard, but I seldom hear them anymore too.

Brian
Ft. Worth, TX

According to this,
http://wiki.radioreference.com/index.php/Common_Public_Safety,
it is a Nationwide Mutual Aid simplex channel.
Wonder if DPS units could be using it for car-car use.
Has anyone confirmed simplex DPS car-car on any other freqs?

I can confirm that too. I don't hear
them anymore, or haven't in a very
long time. Used to be active (sometimes
on a daily basis) on 155.505 & 159.090.

I've heard transmissions on the same freq/tone a few times mobile between Sherman & McKinney in the mornings. It sounded like a PD or SO to me.

Well, I don't think it was DPS really. This was an analog transmission and I don't think DPS is using any of the newer frequencies in any non P25 modes. I'm not 100% sure though.

I looked in Oklahoma too (via the FCC database) and even across the whole country and there are very, very few listings with this frequency at all. I believe there were two listings in Texas, none in Oklahoma, and maybe four or five in the whole country. I've finally locked 155.4825 out for a little while because it became too hard to copy. But there's definitely someone using the frequency and the next time we have some good skip/ducting, I'm going to try and figure out who it is :)

LOL!!!

Deputy? Every time I go somewhere it never fails. If you are not with press you need to move back. Well I am not with press but sometimes I just say yeah and oh that does not even work. I move like 5 feet back. Then you get people coming over to you and trying to talk to you while you are shooting when really they are just trying to distract you from the scene. I hate that! Anyway.

I have no idea with that flight lady. This is the country I guess things are kinda different. First time I have ever seen Lifestar on the ground to.

Best of all the fat lady with short hair. I have not a clue.

Everyone else did the video play ok? It was shot in HD then rendered. Then rendered again to flash. Would like to know how it did.

I always get told to stop recording. In the city it is like this: Sir, I am going to have to ask you to stop recording. I don't.

What was not on camera. This guy walks up and says can you not record this. He was very nice about it. Not a jerk. I said I am taking a wide shot and if it does get aired anything that NOT SAFE FOR TELEVISION will be edited out. He said ok no problem well then I will just have to ask you to step back. I said ok I can do that but I do have a 20x zoom so I will just zoom in it makes no difference. He walks off and comes back about 3 mins later and gives me the thumbs up and says it is ok to shoot it.

Correct me if I am wrong but hasn't it been that if it is in the public view it can be shot? That is the way I have always done it.

By the way this is the longest extraction, time in the ambulance to flight I have ever seen. I arrived 15 min after the call came out. Shouldn't there have been a faster extracation? Maybe using the jaws a little quicker? I am not a medic so I don't know.

Jason,

I thought the video quality was fine. However, the audio had a loud 'grinding' background noise to it. At first, I thought it was the hydraulic jaws or the generator for it. Later, I thought it might be the helicopter rotor. After the copter took off, the noise stayed, so I don't know what it was.

I found your video of a Garland laser radar trap on George Bush. It had the same background noise. Just irritating.

I thought maybe the noise was on my end, but I haven't heard anything like it before on any video I've watched. If it were on my end, this computer would be in the shop within an hour. I don't know what the noise source was, but your audio did bother me.

29553. RE: [dfwscan] MVA -- and gas prices

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-01-31 16:44:56 UTC
From: Toby Zidle
Topic: 26744 Message: 29553

Rob,

I filled up with regular gas at a RaceTrack station Thursday night at Trinity Mills and the Tollway. $1.62/gallon. On Friday, I passed a Chevron station at Marsh and Royal (or Walnut Hill) where regular gas was $1.99/gallon.

The price is highly variable, but Chevron and Texaco are always at the top. In the Love Field area, the Chevron at Lemmon and Mockingbird is always at least 20 cents more expensive than the QuikTrip three blocks west on Mockingbird. I can't figure out how Chevron stations can stay in business.

Jason Simpkins wrote:

> Anyone else noticing this sound?

Not here. The only thing I had as
background noise was the sound
of the power unit for the Hurst tool,
and the engine/generator for the
FD truck. Didn't bother me...Typical
sounds on an accident or fire scene.
Noise and general controlled chaos.
You get used to it in a short period
of time if you're an observer/media
person/reporter at a scene.

Blaine

Nice! I've been in Floridia for three weeks now, and the lowest price around here is $1.89, with the average being around $2 dollars per gallon. It was fifteen cents or more cheaper in Georgia, Alabama, Louisiana, and Mississippi. I guess this is how Floridia makes up for having no state income tax.

From: Russell Adams
Topic: 29563 Message: 29563

I've been monitoring Cedar Hill/Desoto/Duncanville on their MPT1327 systems. They all seem to be using it, now. I see a PL of 131.8 on all the voice channels. It is it safe to say that I will catch all their transmission if I use this PL or will I be missing some of the voice transmissions? Using the PL also blocks out the data channel so I haven't had to lock it out. It's like listening to Motorola and EDACS systems in the old days without a trunked scanner. Program all the channels as conventional and block the data channels. Nights and weekends it mostly public safety only, so it's not hard to follow the conversations. Are they using this system for non-public safety, as well?

LOL...

Hey, they're gettin' ready for the Valentine's
Day rush!. Also, I can walk to the store.
Honestly, it's much more a case of wanting
to know the frequencies of everything in my
immediate vicinity more than anything else.
I feel I'm sorta' like my buddy Matt Stone in
that regard. Plus, I figure if someone is using
a radio, it's my job to figure out what they're
using! It's the thrill of the hunt....:) And every
once in a while I find a frequency that everyone
wants me to be quiet about. Those are the best.
I seem to recall a 173.9875..... M.C. ...you out
there? ...hah, hah....

BTW - As a former Wallyworld employee, I
can tell you the only thing you'll hear on their
frequencies are arrogant managers and
supervisors who don't have one iota of a clue
how to manage or supervise! However, you
(the monitor) can sit in the parking lot and
listen to them being idiots though!...Great fun
at Xmas time!

That's great news to hear! I had stopped even trying to listen to the fire departments after the switch, believing that they had migrated to the new system. Glad to know that they are still sticking with what works!

I always find myself wondering if any administrator has ever lost his or her job after suckering the city/county/state/whatever into buying an expensive piece of crap system that didn't work as advertised. If not, they should be.

Well funny you should say that about people loosing there job because just this monday there is a posting on the Texas Municipal League website where SWRCC is now all of a sudden looking for a new communications director. God forbid they should solicit feedback from people who actually use the system and talk on it instead of from vendors.

Yo Blaine, since you are mentioning your experiences at Wallyworld, I would have thought you would have been perfect for management and would be running the joint by now!!!

Hah, you asked for that one buddy!

In regards to the publicity of certain sensitive frequencies, we have had this argument numerous times in the past. It has been my experience over the years that when they become common knowledge they have a tendency to go away. Why hasten the process? I'd be more than willing to continue this conversation in the Tavern.

Now back to the Super Bowl.Go Steelers!

M.C.

LOL...

Hey, they're gettin' ready for the Valentine's Day rush!. Also, I can walk to the store. Honestly, it's much more a case of wanting to know the frequencies of everything in my immediate vicinity more than anything else. I feel I'm sorta' like my buddy Matt Stone in that regard. Plus, I figure if someone is using a radio, it's my job to figure out what they're using! It's the thrill of the hunt....:) And every once in a while I find a frequency that everyone wants me to be quiet about. Those are the best. I seem to recall a 173.9875..... M.C. ...you out there? ...hah, hah....

BTW - As a former Wallyworld employee, I can tell you the only thing you'll hear on their

frequencies are arrogant managers and
supervisors who don't have one iota of a clue
how to manage or supervise! However, you
(the monitor) can sit in the parking lot and
listen to them being idiots though!...Great fun
at Xmas time!

Like you, Jason, I used to broadcast mine
through Shoutcast. They have an FAQ, but
I need a refresher too. My older and feeble
mind can't remember all the techo stuff to
set it up. Recently, I downloaded the server,
etc., but forgot how to set up the ports, etc.
I might have had it set to not open the port
(I can't remember), but I need a refresher
on how to set up the router for it, and how
to use DynDNS again. If I remember correctly,
Melissa Rasmussen baby stepped me through
the first time I set it up, and it worked perfectly.
Maybe if she has the time, she can do that again
for us here on the list. Over time, I took my feed
down, because 1. I could not dedicate a whole
computer to an online scanner and 2. There
were just not enough consistent listeners
even when I had (or announced) it was on.
But generally 1 beat out 2.

Check out www.scanamerica.us

Very easy to set up and there are already a few on there from the DFW area.

Hi Jason,

As Blaine said I would check out scanamerica.us to broadcast. I am running my Dallas FD/PD up there and have nothing but good things to say about that site. I used to run my own shoutcast server on my home machine but found that it's really more efficient to send the audio to them. The bandwidth use is minimal (I am sending out a constant 5k stream). Another good thing is especially if you don't have a fast connection is that you are not limited to how many connections you can have as everything is done on the server side. Drop me a private email and I can get you Gordon's (the gentleman who runs scanamerica) email address if you don't have it already.

Ahh the thrill of the hunt. How I love thee. :) You are right Blaine, I am a total frequency hunting junkie. I probably have over 100 frequencies in my scanner right now that I have been trying for months to figure out who in the hell they are. Those don't include any of the unknown retail frequencies that I have found either.

For all you milair folks:

Bunch of NORAD training today. Players
are AWACS from Tinker, DOOM B-52's from
Barksdale, and a few others I haven't
identified.

So far, a bunch of activity on NORAD
AICC - 364.2, and FWARTCC DAL
SECTOR 379.25.

Sounds like the training orbit is right
over the DFW area.

Yea, and they are laughing at us (perhaps you specifically) each time they key the mic. "If those dumb a** scanner listeners had kept their mouths shut about being able to listen to us years ago we never would have been able to justify getting all that money we needed to get this new totally secure radio system. And those idiots would still be able to hear us talking about where we are going for breakfast," the USSS SA LOLs to another on his way to work!

Just to keep on topic, I don't believe encryption needs a NAC code, but that kind of thing is above my pay grade!

> radio system.

Oh, yeahhhh budddddy...I'm sure that's what
every special agent has on his mind when he
heads into the field office every morning...
"how can I foil those dastardly scanner
monitors and media folks from listening today..."
I'm sure that supercedes any other thoughts of their
daily investigative cases, as well as advance team
planning and protectee visits. They certainly couldn't
be more busy with those elements....Naaah, never....

I personally think that the recent use of encryption on
the new law enforcement digital systems is simply a
matter of convenience for the radio techs. Set up the
brand new P25 system with all the bells and whistles
(and associated encryption) already enabled at the base
console, and you already have the tank in motion. Set
up the new portables and mobile units with encryption
right out of the box for the agents and units, and viola!,
the radio techs can go get a cold one...Plus, also remember
that post 9/11, encryption is a new toy for many agencies
to play with...that previously may have never considered
the option ....all in the name of "national security"...whether
it's truly needed or not.....Look at all the abuse of increased
federal funding for "homeland security" post 9/11. Some
of it has been a real circus. So now you have cities across
the US (that are on new digital systems) using encryption
for the freakin' fire department and animal control!!

Just to keep on topic, I don't believe encryption needs a NAC code,
but that
> kind of thing is above my pay grade!

What? You don't like listening to the drunk R2D2?
Well, basically I posted that for those of us that
have the GRE radios that show the NAC but don't
block out encryption. And who knows? Maybe..
they might just decide to throw R2D2 to the Jawas,
and go "all clear" some day.....:)

29586. Possible SVR weather on Tuesday

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-02-08 04:23:18 UTC
From: Ed C.
Topic: 29586 Message: 29586

This is a snip from the KFWD forecast discussion this evening - Talking about the possibilty of SVR on Tuesday - The latest GFS model run I looked at shows convective initiation around Abilene to west of Wichita Falls in the early afternoon... If this play out - this could be a dangerous event. Time to get the radios set up for springtime monitoring.

Ed

THERE WILL BE A BRIEF BREAK IN THE RAIN CHANCES LATE MONDAY AND
EARLY TUESDAY...BUT THE NEXT UPPER LEVEL SYSTEM WILL BE RIGHT ON
THE HEELS OF THE FIRST. THIS SYSTEM WILL NOT HAVE A CAP TO CONTEND
WITH AND WILL TRACK MORE WEST-EAST ACROSS THE RED RIVER VALLEY AS
IT DEEPENS AND CLOSES OFF. 500 MB TEMPS IN THE CORE OF THE UPPER
LOW ARE PROGGED NEAR -30C AND WILL CONTRIBUTE TO UNSEASONABLY
HIGH INSTABILITY WITH CAPES WELL OVER 1000 J/KG. 60-70KT BULK
SHEAR...AND OVER 400 MS/S2 OF 0-3KM HELICITY WOULD SUPPORT
SUPERCELLS AND POSSIBLY TORNADOES. NAM IS MOST BULLISH ON SEVERE
WEATHER THREAT...EVEN ADVERTISING A LATE AFTERNOON DRY LINE AS THE
FOCUS FOR CONVECTION. STILL A LOT CAN CHANGE...AND WILL CONTINUE
TO MONITOR SUBSEQUENT MODEL RUNS. WILL HIGHLIGHT SEVERE THREAT IN
HWO AND INCREASE POPS TO LIKELY TUESDAY AFTERNOON AND EVENING
FOR THE CENTRAL AND EASTERN CWA.

Please ignore the attached SPAM - I have no control over it.

They were showing something in Denton or there abouts on the early AM news, and one shot was of a free-standing tower of some sort bent over in the middle. It was next to a steel building. The newscaster on the scene said something about the debris was arranged in a circular pattern.

Weather Channel showing some awesome
live footage of a tornado on the ground on
the northwest side of Edmund, OK. Looks like
the storms are building to our west. Should
be a VERY interesting afternoon and evening.
Time to fire up the weather radar software (I
personally use GRLevel3), and make sure you
got all the good SKYWARN frequencies in
the scanner. For the newbies on the list, for
my area, Denton County SKYWARN is on
146.920 (Pl 110.9).

I assume you are talking about the uniden USB cable and that you took off the sticker that said 'install driver before using"

go to unidens site find the USB cable page and the driver is on there somewhere. You may have to register to get it. I've slept since I did it many moons ago.

I was hearing about this down south (Corsicana) today. It appears it may have been a satellite that came apart because the area of falling, burning debris seemed to cover much of the N Texas metroplex. I'm going to see if Fox 4 has anything on it in a few minutes. Somebody's new station will I'm sure...

Play with the tilt on Google Earth. It will show the relative tower height (red line, if I recall), and the height of any point-to-point microwave antennae. WBAP tower off I-30 and Beach is a good place to see this.

Today I am picking up a lot of other stations on the radio and getting bleed over. If I am listening to Rockwall County Sheriff all the sudden it will stop and I hear another station coming in with no bars. Then an officer was talking earlier and someone walked right over him. But it was not local. Is like a skip day or something.

Just wanted to pass this along

Severe Weather Awareness Week, February 22nd through 28th

National Weather Service Severe Weather Awareness Page:
http://www.srh.noaa.gov/lub/safety/swaw/index.php

Texas Governors Division of Emergency Management:
http://www.txdps.state.tx.us/dem/pages/weather_aware_severe.htm

And to keep this on a "scanning" topic, heres a list of Amateur Radio
Frequencies for SKYWARN/RACES/ARES for DFW and surrounding counties:

146.940 Tarrant County
146.880 Dallas County
146.920 Denton County
147.180 Collin County
147.340 Cooke County
147.040 Parker County
145.470 Palo Pinto County
146.620 Wise County
146.780 North Texas Weather Group (Wise County)
145.490 Johnson County
147.080 Hood County
145.410 Ellis County

For a full list of frequencies visit the NWS Skywarn Frequency List Page:
http://www.srh.noaa.gov/fwd/repeat.html

FWIW, there is a difference in CAD codes and radio signal codes. CAD "codes" are used by the calltaker to generate an incident or ticket. You wouldn't generate a call just to have someone "public service" or call someone on the telephone. That would usually just be a message sent to the dispatcher (like a pop-up window) that would basically say something like, have such and such unit call this number via public service. You also would not generate a incident or call to place a unit in or out of service. That is accomplished by use of function keys on the computer usually. same thing for enroute, on scene, available, etc.

Yeah I am hearing this all 3rd party. Rockwall County Dispatch was advising the officers that an Amber Alert was going to be issued. Then about 5 min later she came on and said the vehicle has been entered stolen and the Amber alert was just issued. But maybe there is a delay or something. I can't hear Plano from where I am so I have no idea what is going on.

29624. Ft. Worth Army Corp of Engineers (Question)

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-02-19 20:16:29 UTC
From: KC5RHB
Topic: 29624 Message: 29624

I've been updating my radios and have noticed its been months since I heard any traffic on the Corp of Engineers Frequency, Fort Worth Office, Benbrook Lake, 165.050/163.4375 (162.2) and the repeater is off. Did they go to the Fed digital system? I did some looking in the forums and noticed other states Corp Of Engineers were going digital.

From: Terry
Topic: 29616 Message: 29625

I missed on! I was combining an old list and doing corrections from a new list. Gary is correct the "33" that is between 43 and 45 should really be:

44=Person in Danger

This one is commonly used for things like people in high water etc.

Sorry for the typo!

Terry

Man, that's what I'm doing right now is reprogramming radios because
of agencies changing frequencies. What should of happned when Fort
Worth/Tarrant County went trunk, all the little cities should of just
jumped on board.

Ok, do we know what type of trunk? Is it digital? Cuz I'm not buying
a new scanner just for "White Settlement"...lol

Thanks Ed for the info, I will add it to my files and watch it.

29628. Carrollton gas leak

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-02-20 17:15:04 UTC
From: Blaine Brooks
Topic: 29628 Message: 29628

Sounds like Carrollton may have a gas leak
somewhere. Haven't been able to get many
details. They do have a command set up
on Tac 2, and estimating maybe another
hour to repair.

FWIW, I haven't heard activity in years from
Corps Of Engineers. Considering yourself
lucky that you heard something just a few
months ago. It got so silent for me I just took
them out of my scan list, and chalked it up to
pagers, cell phones, Blackberrys, or Nextels.
Just the way of the world in today's technology
age, much to the bane of many monitors.

From: Ben Saladino(YG)
Topic: 29633 Message: 29634

Generally speaking, stuff flying way overhead is likely to be controlled by Fort Worth Center (ARTCC). As aircraft approach and depart airports at lower altitudes, they're handled by TRACON, and of course by the tower and ground control closer to the airports. I have some old information on my website at http://www.bensware.com/scandfw/fwartcc.htm. There are probably some more current lists out there somewhere.

Happy scanning,

Ben

FWARTCC SCURRY - DALLAS HIGH SECTOR

135.75 / 379.25

There are more frequencies for Ft Worth
Center, but this is the main one for
directly overhead, and above FL180.

I have the low and high altitude frequencies
(UHF & VHF) for the closest RCAG's
(communication sites) in my frequency list
on my web page.

http://mysite.verizon.net/resrjsf6/

It's in an Excel file about halfway down, and I
keep the list regularly updated.

Enjoy!

From: commscan
Topic: 29633 Message: 29636

As Ben and Blain mentioned, there are a lot of frequencies that can be carrying the traffic. Here are a few bands that you can also search for all types of aviation traffic. There are frequencies for Ground Control and Tower (if you are close enough to monitor them) traffic, ARINC (or company) frequencies, UNICOM (used for a lot of air-to-air traffic and even by many smaller, non commercial aircraft at fields with no towers, and tons of other general aviation frequencies in the VHFG-Hi aviation band. If the commercial airlines you see flying are specifically what you're interested in, this band is what you'd be interested in. Check out:

118.000 - 136.975 MHz: VHF-Hi aviation band (AM)
225.025 - 399.975 MHz: UHF military band (AM)

The following are also good for military air-to-air traffic. Just remember that your scanner will default to the FM mode on the following two sets of frequencies so you'll need to be sure to switch to the AM mode if your scanner allows you to.

138.000 - 139.975 MHz: military air-to-air/ops traffic (AM)
138.025 - 149.975 MHz: military air-to-air/ops traffic (AM)

Hmmm...I don't know Bill. I know that many HF/shortwave MWARA (Major World Air Route Areas...i.e. Air Traffic Control on HF) and RADARA (Regional and Domestic Air Route Areas...more company oriented uses) frequencies are still used.

I haven't listened to any of the MWARA/RADARA traffic in a long time. There was an 11 MHz frequency that was used for a lot of reports that sound like what you described for a company flying out of Florida to South America that use to be real busy. But I cannot seem to remember the frequency or where it is in my HF database. If I remember correctly, a lot of traffic started becoming non English on the frequency and it seemed to have faded away by early 2001.

I'm sorry I couldn't be more help...

Yeah, its been a while since I had a good HF rig and a long antenna, but what I used to listen to was U.S. airline pilots reporting maintenance issues, etc... It got rather funny at times -- loose toilet seats, smells, etc... Just stumbled across it one day while tuning across the band for some English-speaking programming.

Not sure what the HF frequencies would be,
but domestically the ARINC frequencies are
used on VHF frequencies, and can provide
just as much entertainment.

Search from 128.825-132.0 AM 25khz spacing.

I used to keep a confirmed list from DFW of
users, but now that I am in Lewisville (and
not as close to the airport), I no longer have the
list. I think Tracy Singleton had a very good list,
and then I just expanded on that. Maybe he can
repost. Also, you'll find several airline companies
may share the same ARINC frequency for
maintenance issues. This is quite common at DFW.
Especially if, let's say, an international cargo only
comes in once or twice a week.

Also, if you're into it, there are programs to monitor
ACARS.

All of my stuff is still in the files section for this group. I don't know how much HF is used anymore. I'm sure it is to some point but most airlines these days have gone electronic and have their messages relayed through ACARS. You might try looking up Gander Oceanic for some freqs for the northern Atlantic routes. Remember that ARINC is not specific to one airline. Any pilot can use ARINC. It is a service that you pay to use. My list of company specific freqs are in the file section.

Someone needs to be paying major forfeitures over this. The double standard is appallingly, yet predictably hypocritical.

Indianapolis Officers Must Stop Profane Talk on Illegal Radios

Posted: Tuesday, February 24, 2009
Updated: February 24th, 2009 09:28 AM EDT

Story by theindychannel.com

INDIANAPOLIS --

Dozens of illicit radios were ordered removed from Indianapolis police cars after ham radio operators complained about the language officers used on radio frequencies they aren't supposed to be utilizing.

Hundreds of police officers used what they called a second radio to talk to other officers, but those radios don't have federal authorization, 6News' Jack Rinehart reported.

Officers sometimes used the extra radios for officials business, but they were also used for personal communication and biting, sometimes profane commentary about their workday.

"I've heard, basically, obscenities," said a ham radio operator who didn't want to be identified. "I've heard comments about private citizens, in general."

"I'm locking that guy up. I'll write a report, and that way, she'll want to report his a** anyway," an officer said in a conversation that the ham operator had recorded.

"F*** it, ha ha ha," exclaimed another officer.

Ham operators who found the language offensive reported it to the Federal Communications Commission, prompting the department to do a three-day inspection of cruisers and ordering everyone with an unlicensed radio to remove it.

"Apparently, there has been a problem with some language, which is a violation of the FCC regulations," said Indianapolis police Lt. Jeff Duhamell. "The chief has decided that the officers should pull them out of their vehicles."

The FCC is letting Indianapolis police handle the issue internally. Officer use of unauthorized frequencies goes back many years, Rinehart reported.

I see it says "ham radio operators complained",
but it doesn't seem to say whether or not they were
actually on HAM radio frequencies.

That is exactly the point I was making. We all know what happens to those Hams when they get caught. At the very least, the same thing -- and probably more -- should happen to government officials who violate the same laws.

The assumption to be made from reading this article (which is poorly written, like most newspaper articles today), is that these coppers were using ham frequencies. If they were, then they need to be jammed up for not having ham licenses. Sounds more like a case of them using police band frequencies not assigned or in-use. It's happened a lot around our area in times past, and those frequencies are generally a really good find (we just don't tell Blaine!!!). This sounds like a ham operator with a grudge against the cops who he caught using profanity. Obviously this prude hasn't listened to any LTR systems in our area that are full of wrecker and sweeper company radio system where the drivers consistently cuss on the radio like a bunch of drunken sailors! Behind the scenes, the Indy police chief probably slapped his boys and girls on the wrists while trying to maintain a straight face, had them take the radios out of the cars, ordered them back to work and to stop acting like a bunch of knuckleheads. And the good listening goes away!

Ah, No!

I'm almost betting these guys were on 11 meters, that's the secondary radio's that most cops have, and if that's true, the language there is something that not just cops have to worry about.

Just after I purchased a Radio Pro 97 scanner, I received my Mom's Pro 34, as she did not need it. The 97 has a 6 volt power supply, while the 34 is 9 volt. Interesting aspect is the increased reception of the 34 using my new 1/4 wave antenna. My 97 has trunking capabilities, but for some reason gets less reception on the railroad freqs. Would the 9 volt system of the 34 lead to the increased reception?

DOOM (B-52's from Barksdale) are doing practice
bombing runs at the Falcon Bombing Range (R-5601)
in Oklahoma. Primary is 356.5. Very active this
morning and very strong signal into my listening
post with details of targets, bomb release, and
coordination with (what sounds like) a
ground controlling unit.

Also, the AWACS is up and active on NORAD AICC
364.2.

344.7 AR-104 refueling track has also been very active.

Sounds like a very busy milair day, or maybe I'm just
picking up more now....:)

Finally, after a year of being in my apartment, I
attached my old Diamond Discone to my balcony
railing, clamped it down, made it nice and neat
with cable ties, got a 25' run of LMR 400 with the
PL-259 at one end, and BNC at the other from Scanner
Master, and hooked that puppy up to my Stridesberg
4 port amplifier. Not as up and "in the clear" as
when the antenna was at the house, but it's the
absolute best I can do right now with my situation.
I can now pick up Arlington TRS, McKinney, Collin
County, Northeast Tarrant, and Irving (faintly),
whereas before (with just a little mobile antenna
outside on a table), I basically heard nothing.

So long story short, I plan to aggressively get back
into milair and increased fed monitoring with the
new setup.

Blaine

That's what I figured. Another do-gooder ham
out playing radio cop, and getting in everybody
elses business. Reminds me of the nosey old
lady that always complains to the police about
her neighbors. If they were interfering with
licensed operators on those frequencies, let
THOSE people complain to the FCC. Through
the years, I've probably heard all kinds of illegal
and unlicensed communications on my scanner,
from abusers on the marine bands in Florida, to
GMRS, to business, to folks interfering with
public safety, to even some crazy people on a
Secret Service and DEA frequency doing chit
chat. Did I report any of them. NO!!! Why?
Because it was none of my damn business.

I can understand your concerns, and I don't
want to get into a p***ing match here. All
I'm saying is let the people who are tasked
with the job (the FCC) do their jobs. It's not
up to you to feel it's your God given right to
play radio cop just because you're an HRO.
I'm just afraid the people that go around
doing this stuff are really going to get
themselves in a bad situation some day
trying to take the law into their own hands.
If your next door neighbor was a drug
kingpin, you'd call the DEA, not try and take
them down yourself!!!....unless you were
downright stupid!...

For the record, QRZ.com has a link to the Indianapolis TV station that broke the story.
The video shows the radio in the car, and it sure looks like a Kenwood TM-271.
That does make it a ham problem, doesn't it?

I guess I don't see the analogy, Blaine. Calling them out on this is no different than calling 911 to report an emergency. Just like the cops cannot be everywhere at all times, neither can the FCC. They rely on citizen reports to find violations. Read the enforcement logs for a few minutes. 99.9 percent of all enforcement actions are the result of citizen complaints, not the FCC driving around in black antenna farms, looking for violators. I just don't see those reporting this violation as any different from you calling in a burglary to 911. It's how the system works.

True, and for years [and still is] the Low Power [Secondary use] of various
Part 90 frequencies
is allowed for various Coveret type operations. Only as long as they don't
interfere with
the primary Part 90 users.

Here in New England some have even used Base Stations [there goes the LP]
and PD use of FD channels.

No one reported them, we all enjoyed the listening.

From: Tracey W. Singleton
Topic: 29649 Message: 29682

Am I missing something here?

I don't think we are talking about simple unlicensed usage. We are talking about multiple users who willingly installed unlicensed equipment, operated on unlicensed frequencies not just one single time or even an occasional time, but on a daily basis.

More than likely they violated department policy by discussing details of incidents over the air (a no-no in any agency), and used obscenity over the air (an FCC violation in itself regardless of user for public safety and ham radio frequencies).

People seem to forget that ham radio frequencies are established not only as a way for people to enjoy radio communications as a hobby, but they themselves exist as a backup radio system in times of national emergencies. Ever heard of RACES?? Blocking one of our ham frequencies in my book is no different than if a ham blocks a public safety freq.

Bottom line is they knew what they were doing was wrong, and chose to continue doing it. The article makes it sound like the PD Chief was the one who made the officers remove the radios from their vehicles. I can assure you that this is not the case. The FCC probably threatened severe monetary punishment if they weren't removed. The officers bought these radios for one thing, power output for severe sh*t shooting.

Bottom line is this...stay on your own dang channel.

If they broke the law, they should be punished, and I would expect nothing but the same if a ham were involved.

Amateur operators police themselves and the Ham bands. Otherwise the FCC would let it become like the Citzens band. There are some appointed official observers who watch for splattering transmitters and key clicks and for any other illegal activties. There are a few rowdy places like 75 meters, but it is always been this way. Call it what you will it is better than the chaos on 11 meters. The FCC is the big stick after documentation is provided by a radio operator.

I'll make one more comment to your post, Blaine, and to Russ:

Blaine: It's one thing to find the offender, document the offenses, video-record the proof, and turn it over to the FCC. It's quite another to show up at their doorstep and demand they hand over their equipment. I do the former, not the latter.

Russ:

I agree. Malicious jamming is a bigger issue than just unlicensed operation. I seldom mess with / care about someone who's chatting where he or she shouldn't be. I DO care if emergency officials aren't able to perform their duties, and keep themselves and us safe, due to some @#%#^@$^ with a mic.

Getting off my soapbox now.

:)

I know you're a DPS dispatcher but do you actually monitor the Tx Law freq? It seems very few dispatchers do, at least in the Dallas area. My point is no one is listening, at least that what it seems, so except for scanner folks etc it's not likely "official" user would know. I would hope you'd hear and report if it were on your primary channel(s).

Back in my dispatching days; that's when Tx Law 1 and Tx Law 2 were called Inter-City, I used to monitor it all the time. And yes back then it was mostly a BS channel here in Region 1; but that is showing my age. I doubt any of my folks today would even know what Inter-City even is. In fact, I don't even know how it is labeled on the consoles.I do know that it _IS_ in there.

Ok, I know that cities will be rebanding. I read about it a few times and thought I will just wait till that happens. Well now Ben you have posted that you see Richardson has some freqs below the regular ones now that is going to affect me I am assuming. So, here is the question. What is this re-banding stuff? They just dropping a few frequencies below the regular therefore my scanner wont pick it up? I run a BCT 15 and a 796D. Can these be flashed or whatever.

I listen to Richardon a lot and would be pissed if couldn't all the sudden. I have been hearing them doing a lot of radio checks. Probaly just the norm. Chek 1 2 1 2 1 2. Stuff like that on Special.

29697. RE: Richardson - [dfwscan] Weekly FCC grants February 22-28 Ok it's time for me to ask

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-01 15:05:45 UTC
From: Ben Saladino(YG)
Topic: 29696 Message: 29697

Since Richardson is EDACS (which uses LCNs), it's simply a matter of reprogramming the frequencies you have in your scanner. That's assuming they don't change the order of the frequencies in the LCNs (Logical Channel Numbers).

Assuming LCN 1 is 867.2 now, it will probably be 852.2, after the rebanding.

If you have the room in your scanner, I would start listening on the 852 range frequencies that are 15Mhz lower than the current trunked system channels. When you start hearing traffic there, and stop hearing stuff on the 867 range, you know they've made the switch.

The firm updates for scanners will be for Motorola systems that use a more channel mapping. Simply updating the firmware won't reprogram the frequency changes, that's another step.

Bottom line, you're in luck with Richardson, because they are EDACS, you can simply reprogram the frequencies in the scanner.

I hope that helps and makes sense,

Ben Saladino, KC5IRJ

From: commscan
Topic: 29698 Message: 29698

I haven't seen much news or listened to/heard much traffic on this patch to know if there's an event going on, but Forest Hill PD's Traffic/TIU TG 21392, FW's School Liaison TG 3792, and FW's YOUTH TG 3760 have all been patched together since Friday night. I think there was some sort of sports/ball game radio traffic on the patch yesterday but I didn't get to listen too long. The patch is still up right now.

Does anyone know why this patch is up and what it might be getting used for?

Yes, We (every DPS station) monitor TX Law 2 100% of the time, mandated by the Chief of Hwy Patrol.

Our station supervisor and the regional supervisor even call us on it occasionally to make sure that we've got the volume turned up. With all of the grass fire danger, that's the only way in which the Texas Forest Service can communicate with us.

I know you're a DPS dispatcher but do you actually monitor the Tx Law freq? It seems very few dispatchers do, at least in the Dallas area. My point is no one is listening, at least that what it seems, so except for scanner folks etc it's not likely "official" user would know. I would hope you'd hear and report if it were on your primary channel(s).

I don't know about individual County SO's or City PD's, but for State business I can guarantee you that, in the state of Texas, nobody is on TX Law1 or 2 or the DPS frequencies except those who are supposed to be there; and, if there were The FCC would be notified in about 5 seconds, along with DPS CLE.

Oh, I agree with you on the proper procedure and how to go about it.

If these guys want to help, they can help find the jammer on '94 during weather events, Huh?

R

I'll make one more comment to your post, Blaine, and to Russ:

Blaine: It's one thing to find the offender, document the offenses, video-record the proof, and turn it over to the FCC. It's quite another to show up at their doorstep and demand they hand over their equipment. I do the former, not the latter.

Russ:

I agree. Malicious jamming is a bigger issue than just unlicensed operation. I seldom mess with / care about someone who's chatting where he or she shouldn't be. I DO care if emergency officials aren't able to perform their duties, and keep themselves and us safe, due to some @#%#^@$^ with a mic.

Getting off my soapbox now.

:)

I'm making a swat/hostage bank for Tarrant County in my scanner. I've got the talkgroups that are obvious (swat/hostage/tactical)for the different systems in the county. I'm not so sure about talkgroups labeled with "TAC" (TAC-3 in Arlington is Ballpark Ops). I'm looking for SWAT talkgroups or conventional channels that might be labeled as something else and in specific the talkgroups for Arlington, Forest Hills and Colleyville.

Thanks

If there is no ball game, TAC 3 has also been used for other tactical activity (such as what you are interested in). All Arlington TAC channels are really hit/miss as far as interesting comms, go, on any particular day. Which one gets used for an "interesting event" really depends on what else might be going on on the channels at a particular time.

From: Blaine Brooks
Topic: 29713 Message: 29713

Getting an "in the clear" transmission on
407.500 with a NAC of 293. The signal is
very sporadic, sometimes strong enough to
break the squelch and decode, other times
it just fades off into nothing, so I don't even
know if it's local. Doesn't sound metro-wide
though if it is.

Very brief talk this morn about analyzers,
installing a new drainage, talk of air
conditioner, and power grid distribution.
Definitely maintenance somewhere. It's
that "somewhere" I don't know. Hopefully
we can ID soon.

Media Folks,
I just heard some activity on the NE Tarrant system, decimal 32880, which is patched into the airport. The airport is responding with Grapevine to an injured person(off his meds), who jumped off an airplane for some reason. Not sure of the circumstances, but if it's a slow news day, it might be worth checking out. Sounds like PD is bringing the guy to Station 1 on the airport, so he's probably not hurt too badly.

There is a thread about this freq under the Texas forum on RR the first of last month. The speculationw as that it might be USPS inspectors but I don't know what that was based on.

----- Original Message -----
From: Blaine Brooks
To: DFWSCAN Group
Sent: Tuesday, March 03, 2009 11:23 AM
Subject: [dfwscan] New frequency?

Getting an "in the clear" transmission on
407.500 with a NAC of 293. The signal is
very sporadic, sometimes strong enough to
break the squelch and decode, other times
it just fades off into nothing, so I don't even
know if it's local. Doesn't sound metro-wide
though if it is.

Very brief talk this morn about analyzers,
installing a new drainage, talk of air
conditioner, and power grid distribution.
Definitely maintenance somewhere. It's
that "somewhere" I don't know. Hopefully
we can ID soon.

I'll see if I hear it at work. Talk of drainage, power grids, etc, sounds like maintenance. If so, & if it's at the Coppell sorting facility, it ought to blow me out at work. I'm three blocks away from there.

Now that they approved it maybe now we will start seeing some action on that P25 that is suppose to belong to Frisco. It's been churning out a control channel for months and months with a very small smidgen of activity and most of that probably just testing.

Well not exactly...
That system was only a pilot system between Frisco and EADS Secure Networks. It was funded by EADS to show off their own systems and to demo to other cities. Since EADS Secure Networks is headquarted in Frisco and has their testing lab here, you would think that they would have had the advantage over Motorola.

Top bids in millions included:
M/A-COM INC $10.53
EADS $7.52
Motorola $7.37

Motorola had the better proposal for interoperability between agencies and the required coverage. That was the main reason Motorola won the contract. They now have to put a Motorola system in place.

29724. Another new freq?

162.075 was very active in the noon time hour
with DES encryption. Heard a very brief in the
clear but couldn't figure out what they were
saying. Sounded simplex, and pretty faint.

Not sure if this could be an input to an FBI repeater
here or not. Since I have tone enabled on my radio,
I don't hear DES/encryption unless I'm searching.

Update - and for you media folks....

The location is going to be in Ferris. 959 Fm 664.
Three persons needing extrication. Six patients
total. At least two medevac aircraft launched,
possibly a third needed. This going to be on FM 664
just west of downtown Ferris. Nasty wreck. Hearing
all the details on 462.175 Pl 123.0.

That would explain if it's just a test system why the coverage is horrible. I live just down the Tollway in West Plano and can barely get a good decode on the control channel. I am glad they are going with a P25 system and not some proprietary type digital system.

Getting a constant carrier w/ a tone of 123.0. Also hearing the clicking and buzzing sounds. Haven't heard Miss Debbie yet. Sounds like a problem at the radio shop, or perhaps its sabotage! I only suggest the later because, seriously.do you really miss her? If I had to listen to her for an entire shift I'd need meds or a twelve-step program. Personally I think they should have gone with Marajel Bartlett's voice. Much more soothing and pleasant. She was the original Nurse Chappel (original series), Waxona Troy (Next Generation), and wife of the late Gene Roddenberry of Star Trek fame.

Hi Mark & Group,

This sounds like a good frequency (460.575) to put a PL tone lockout of 123.0 on if anyone has a Uniden scanner with the tone lockout feature. That way, you can still hear Dispatch Betty if she pops up (she doesn't use a PL tone) and any other transmission not using the 123.0 PL tone.

If nothing else, it should allow the listener the ability to still scan the frequency without locking it out...

Hmmm... are you sure Dispatch Debbie has no PL? All my radios are programmed for 173.0 on 460.575. Anyhow, it's working fine tonight, but yesterday was a disaster. It did sound like a stronger signal was dead keying Dispatch Debbie, but that signal was only there when a dispatch was going out. However, I never listened with a non-PL radio to see if there was a constant signal in between dispatches.

There is a tone on it now. For many years the primary transmitter had no tone and the backup did. I guess someone knocked the bit out her because she's back to obnoxious and understandable 50% of the time!

Hey Dan -

Were you able to get any more details on the nasty one
down in Feriss yesterday. Head on collision, etc.?

Just curious... Suprised it didn't make the news,
but maybe I missed it.

I figured that if the news stations could run a story
about a DISD bus running over a kid, they'd at least
have a blurb on a wreck with two helos and six
injured. Maybe it was just too rural.

I'm trying to get DPS working again, went through the channels and found 2 that were locked out. I unlocked them. Channel 155.45000, while scanning will stop on that channel for a few seconds but no sound. It shows "DAT" on the right side of the screen. I have the squelch adjusted all the way up. If this channel is locked out would that be the reason for no hearing anything on DPS? I used to hear stuff on there all the time then one day nothing.

What kind of scanner are you using? You know they went digital, right? You'll need one of the Uniden/GRE units capable of P25 decode (396, 996, GRE500/600, etc.) See Radio Reference for details....

Subject: [dfwscan] DPS

I'm trying to get DPS working again, went through the channels and found 2 that were locked out. I unlocked them. Channel 155.45000, while scanning will stop on that channel for a few seconds but no sound. It shows "DAT" on the right side of the screen. I have the squelch adjusted all the way up. If this channel is locked out would that be the reason for no hearing anything on DPS? I used to hear stuff on there all the time then one day nothing.

For the latest information on DFW Radio Communications see:

29744. RE: [dfwscan] Frisco P25 system

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-06 05:48:07 UTC
From: Mark Colborn
Topic: 29721 Message: 29744

Snazzy web site, but still doesn't answer my question. They, as you say are "stressing a P25 system and an open standard". Sounds great, but what does that really mean? They are designing a system but suspect they are using someone else's hardware and radios? So is the system they are designing just a re-engineered TETRA or Tetrapol system, which correct me if I am wrong was originally designed by Motorola? We have had numerous companies over the years come to our shop and pitch a new product or system. The most recent was a WiFi downlink/Satellite uplink system offered by a mega-internat who less than one year ago gobbled up another small nich market company to add to their electronic company portfolio. When we asked to see the product in action the response was predictable; "Oh, we are still working on making it all work, but should be able to give you a demo soon." If my agency has to pay good money for something, it better be a proven system or give it to me for free and we will be happy to be their guinea pig!!! Apparently Frisco wasn't all that impressed. They eventually went with the proven system, which coincidently (and imagine that) happened to be the lowest bidder.

Mark

Make sure you go to their North America website. They accually stress P25 systems and the open standard. You can see their products and the old press release from Feb 2008 talking about the Frisco project.

Here's their website:

http://www.eads- <http://www.eads-ps.com/index.html> ps.com/index.html

Got more air to air....

260.1

Squadron pilots chit chat air
to air right now. Very strong
signal. Reference weather
for Tinker and Tyndall. All
craft in the squadron have
about one hour left on fuel.
Sounds like possibly Tyndall
F-15's. Talk now of PAR
approach into Tyndall.

Hi Blaine & Group,

Blaine, you mentioned Tyndall F-15s in your second e-mail on air-to-air today. 320.3, from this e-mail, is definitely used by Eglin F-15s (58th FS out of Florida). Their callsign is ARROW ##. I heard them many times while flying the CAP over the ranch and this was their "Prime 8" channel. 320.3 could be anyone, but with the other possible F-15s around, this would be a good candidate for the frequency/traffic you heard.

BTW, there seems to be some sort of exercise going on. I don't say that from hearing it over the radio. I say this due to the vast number of aircraft flying in and out of NASFW the past 3 or so days. And they are flying late into the night as well as very early in the morning too. This is usually a good indicator of an exercise.

Brian
Ft. Worth, TX

Looking at the archived press releases (2006) I can see that they have an OEM agreement with Tait Electronics. So that is where the P25 Base Stations and Repeaters come from.
Press release (2007) has an agreement with Kenwood to include Kenwood P25 terminals in it's proposed offers wherever possible. So maybe some Kenwood equipment.
Yes, Motorola has the majority of TETRA patents so its up to them to have any systems like that in the US.

Saw on milcom list that they were enroute for DC CAP,
and also using 369.15 for a/a.

> BTW, there seems to be some sort of exercise going on. I don't say that

Well, you're seeing aircraft into the base, and I'm
hearing a crapload of stuff on the radio. Air to airs
and refueling orbits and such that activity has been
MUCH higher than usual. I would tend to agree
something is going on. Keep an ear on all the MOA
frequencies. I know Rivers MOA in Arkansas (288.3)
was very active yesterday with AWACS and fighters.
Caught DARKSTAR, SENTRY, and MADCAP callsigns.
Signal was real good into my location.

29750. RE: [dfwscan] Dallas FD Dispatch Debbie

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-08 06:43:52 UTC
From: Toby Zidle
Topic: 29649 Message: 29750

From my location in Far North Dallas, I used to receive DFD
5x5. Lately DFD Channel 1 has a deteriorated signal (down maybe 6
db) and has become somewhat crackly (like the squelch is cutting out
parts of the words) and 'fuzzy'-sounding. I've been wondering
whether the DFD has been 'adjusting' its system or whether my old
PRO-93 might be losing it and drifting off its frequency somewhat.

29755. Re: [dfwscan] FW: status

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-09 02:43:52 UTC
From: Robert Cross
Topic: 29752 Message: 29755

Status emails are sent every 12 hrs to convey the fleet status, weather status, crew info/issues, he vfr/ifr status, maintenance issues etc to the powers that be. They are pretty boring and cookie cutter. The new "director" of the ops center has nothing to do so he typed a format that must be used to make him feel important. Those of u that lend an ear to CareFlite comms, notice how busy they are. All the good help keeps getting run off, call Jim Swartz on his cell listed below and let him know that you are concerned about the lack of staffing and the workload leading to issues. He usually is left out of the loop but does like to know and will follow up

29756. American flight declaring emergency

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-09 21:49:14 UTC
From: Blaine Brooks
Topic: 29756 Message: 29756

125.025

American 1086 declaring in flight emergency.
Overweight and requesting full emergency
response on field when they land. Took off
from DFW and returning. Direct to 17C.
Currently descending from 11,000'.

Blaine

Topic: 29757 Message: 29760

On 3/9/2009 7:07 PM, David Chaney wrote:

> I suppose it made it?

Yeah, I followed it all the way to landing.
Landed on 17C. Rolled emergency trucks.
Never heard what the outcome was. All I
caught on center was that they had some
kind of warning light come on, and the
captain said "our ops (as in the folks they
contact on ARINC) told us to return."

So they were over Atoka, and turned back.
MD-83. They declared an inflight because
they were fully loaded with fuel (over 100K),
and had 236 minutes of flight left. They were
heading to Philly. I just consider myself lucky
that I caught the traffic on the scanner.
Sometimes you get some gems. Just gotta be
listening at the right place and the right time.

29761. Parker County Project 25 Change

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-10 17:08:15 UTC
From: Michael Stuart
Topic: 29761 Message: 29761

This past week North Parker County Fire 154.2500 pl162.2 has finally change to the P25 TRS, their talkgroup new is 4133. I no longer hear them on their old repeater. Also, Parker County SO Animal Control is now heard on 4105

Michael Stuart - AA5ST
Azle, Texas - Parker County

29762. Re: Parker County Project 25 Change

From: KC5RHB
Topic: 29761 Message: 29762

Are they still re-broadcasting County Fire on 154.340 (162.2)? I havent listened to them in a while. I just got through reprogramming radios so I guess I'll take the 154.250 and 154.725 out. Are they still using any type of conventional either VHF or 800, or has everything gone P25?

Can a Radio Shack pro 2053 and 2151 be programmed using Win95? I'm trying to get all my radios programmed the same and don't want to develop carpal tunnel syndrome programming one at a time manually.....
If not is there a program available to program them?

Bill Anderson

As far as I know...
154.34 is only for the pagers. They don't appear to simulcast everything.
All I have heard on 800 is DPS and Aledo VFD using it for talkaround
Willow park PD and FD are still on their own VHF repeaters
Weatherford PD still has

Part of my message got chopped off.
Weatherford PD still has 155.61 for backup.
Everything else is on the P25 system.
Somebody correct me if any of that is wrong.

Tom

Thats probably why on 154.340 I would only heat the county dispatch or "tone out" a call and that was it. Never heard anymore traffic. I guess I will go ahead and take them out of the radios. I guess I should slowly start a search for a digital scanner. Im sure it wont be long (years) before Fort Worth and Tarrant COunty start to head that way. Thanks Tom,

I dont know how current this is:

100-Sheriff

101-Chief Deputy

102-Jail Captain

103-Patrol Lt

104-CID Lt

105-108 other admin

109 CID Sgt

110-119 CID (Detectives)

120 1st shift Sgt

121-129 1st shift patrol

130 2nd shift Sgt

131-139 2nd shift patrol

140 3rd shift Sgt

141-149 3rd shift deputies

150's transport

160-179 reserves

180's jail, transport, court

190's SRO's

199 EOC Officer

200 Cleburne PD

300 Burleson PD

400 Alvarado PD

500 Keene PD

600 Various county agencies including wreckers

700-749 Venus PD

750-800 Rio Vista PD

800-849 Joshua PD

900-910 Grandview PD

975 Godley PD

6305 DPS Sgt

6150-6158 DPS Waco troopers

1100 Precinct 1 constable

2200 Precinct 2 constable

3300 Precinct 3 constable

4400 Precinct 4 constable

Burleson PD uses their ID numbers as unit numbers, 690 units in Burleson are the City Marshals, 200 units are COPS

29770. follow up to accident on 664 in Ferris last week

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-12 20:58:56 UTC
From: Russell
Topic: 29770 Message: 29770

Blaine...here's a follow up on that bad accident we listened to on 664 in Ferris last week...the one that used several helos an boxes...
Russell

FERRIS ☐ Alexis Hope Bridges, 9, of Red Oak, died from injuries sustained in a three-vehicle accident east of Ferris Wednesday, March 4.

She was a passenger in an east-bound white 97 Ford Taurus which was stopped on FM 664 getting ready to turn left into Covenant Family Fellowship for evening services.

The vehicle, occupied by five other passengers, was rear-ended by a Dodge Ram pickup driven by Johnathan Lopez of Glenn Heights, forcing the car into oncoming traffic.

The car was then hit broadside by a west-bound Chevy Avalanche by a unidentified female.

The white 97 Ford Taurus was totaled on the scene.

Bridges was transported by CareFlite and never regained consciousness after the accident.

Her sisters Kayla and Kassidy, were taken to Children's Medical with minor injuries and were released later that evening.

The two adults were taken by ambulance to Baylor Medical Center.

One of the adults, Sarah Nolan, was treated and released. She suffered a fractured skull and bleeding on the brain.

"She [Sarah] will definitely need some therapy," said Jessica Wise, the owner of the totaled vehicle.

Hope, who was a 4th grade student at WedgeWorth Elementary in Waxahachie, family has donated her organs for transplants helping about 60 children including her heart, just hours after she passed away Saturday.

Born on April 15, 1999, she passed away on March 6, 2009.

She is survived by her mother; Karen Bridges of Waxahachie, father; James Bridges of Morton, MS, step-father; Travis Roper of Red Oak, Brothers; Tyler Jackson, Jamie Bridges, Kasey Bridges and Tre Roper, Sisters; Kayla and Kassidy Roper and Brandi Bridges, grandparents; Mike McCord of San Antonio and Virginia Roper of Grand Prairie, too many aunts, uncles and extended family to list.

Services were held at 2 p.m., March 11 at the Trinity Church, 1231 E. Pleasant Run Road, Cedar Hill with Pastor Lisa Swayze officiating.

Private interment was in Grove Hill Memorial Park, Dallas.

Memorials may be made to: First National Bank, 2010 N. Hampton, Desoto, TX 75115 for the Hope Bridges Memorial Fund.

29771. Anybody got this one?

Yeah, I think the suspect threw several bags of donuts
out of the vehicle.

Seriously, it was a goodie...came out of Denton I believe,
went southbound 35 to Valley Ridge, then back nb on
the service rd. Got back on the freeway at Garden ridge,
and they finally stopped him at Hickory Creek. Had
the freeway shut down for a little while. Hispanic male.
Fought with officers but they finally subdued him. I have
no idea what he was wanted for.

29781. DFW Repeaters

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-16 05:25:07 UTC
From: jared4301
Topic: 29781 Message: 29781

I'm trying to reprogram my F121S radio and I'm looking for the most active 2 meter amateur radio repeaters in the Fort Worth area. I am located in West Fort Worth, but I'm mobile all over Fort Worth on a daily basis. I only have a few openings (about 8)in my radio, so I am only looking for the very active repeaters.

Thanks,
Jared K.

Hello Group and Friends of the Kc5ozh Repeater System!
I will be streaming NASA audio, (on/off), of the Space Station/Shuttle docking tomorrow, on our Rowlett II Repeater for your listening pleasure. Also, the NASA channel on Internet and TV will have a video feed of this event.
Had to pass the following on.....a night-time viewing experience for all us young people and little harmonics out there....IMHO....following....MAYBE the Amateur Radio Operator Astronauts will be talking to us on HAM Radio during their flyby?!
Thanks for looking/listening!
Charlie

Space Weather News for March 16, 2009
http://spaceweather.com

FLYBY ALERT: In a twilight launch of stunning beauty, space shuttle Discovery left Earth last night on a two week construction mission to the International Space Station (ISS). Discovery is now approaching the ISS for docking on March 17th. The timing of this mission favors sky watchers in North America and Europe who will be able to see the two spacecraft flying over many towns and cities in the evenings ahead. Tonight, March 16th, is extra-special because the not-yet-docked duo will appear as distinct points of bright light flying one after the other through the twilight sky--a rare "double flyby." Check the Simple Satellite Tracker for flyby times: http://spaceweather.com/flybys .

29784. Skip/Ducting

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-17 13:29:34 UTC
From: commscan
Topic: 29784 Message: 29784

It's been a real decent night and it seems like a real decent morning for some VHF skip. I've been listening to/confirming a few new PL tones this morning. Wichita Co. SO 155.79 PL 123.0 is booming in, Hewitt PD/FD on 154.115 PL 123.0, is pretty clear, and the Texas Department of Criminal Justice 153.905 PL 100.0 statewide common channel has been active too. I haven't checked any other bands besides the VHF-Hi band.

Sounds like possible Lewisville SWAT action.
At the very least some CID action, on CID 1
channel. Street blocked off. ICE action too.

29789. 154.3775/DCS 654 Wise County

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-17 18:58:37 UTC
From: commscan
Topic: 29789 Message: 29789

Hi Group,

I've been keeping an ear on a few frequencies I heard this morning during the skip. 154.3775 with a DPL of 654 is an image/simulcast of 154.445. The FCC database lists the frequency with Cottondale VFD in Wise County. Springtown, Reno, Alvord, Boyd, and other Parker/Wise County fire agencies are all working a grass fire and now it sounds like a structure fire. All traffic is the same on 154.3775/DPL 654 and 154.445/CTCSS 136.2. The regular Wise County Fire channel 154.445 is stronger and this is not an image. RR.com has nothing on Cottondale VFD. Before I send an update to RR.com I'd like to confirm if anyone else can confirm the 154.3775 traffic too.

If so, please post a reply. Thanks.

Brian

Hey Brian -

This was a new license for Wise County that Gene Mitchell posted in one of his license updates from about a week or so ago. If you're hearing simulcast on 154.445 as well, I would not be surprised with the trend in narrowbanding if this is not the new channel for Wise Co. FD, and they are just keeping the old VHF channel until all the volunteer depts around the county make the switchover. Just a WAG. Thanks for the confirmation of activity and tone. Yeah, I'd alert the update team at RR.

I have 131.8 as the PL to the 154.445 Wise County Channel but you're showing 136.2? Also this morning (around 7:30AM) during the skip I heard another county or FD being dispatched on the Wise County channel. I always keep CTCSS enabled so this must have been someone else who uses the same frequency/PL combination. I don't know who it was but they were definitely out in the country somewhere. Maybe we'll get some more tomorrow morning...

Brandon

Unless the batteries you are using came with tabs you probably can't solder to them. They are usually made of stainless steel or something that won't solder. Years ago I tried that with nicads and the heat ruined them.

Hi Rob & Group,

I remember picking up a VHHF-Hi agency out of Tennessee on 156.09 or 159.09 in the 1980's when I lived in Houston. I actually have a cassette tape somewhere of that very irregular reception night. I listened all night long to the agency.

It seems like tonight is another good DX'ing night too (other than the fact I'm tired and need to go to bed).

>I hate to be dumb, but what do the terms DPL and CT CSS mean?<
Good question.

What are Squelch, CTCSS, DCS, DPL, PL, CG, DCG, and QC tones?
These subaudible(we can't hear them, but they're there) tones are used on some radio systems to eliminate interference and limit access to channels. In radio systems featuring tones, transmitters encode the subaudible tone, and receivers decode the tone. If it matches what is programmed into the radio the speaker is unmuted. If the tone does not match, then the speaker stays muted, thus preventing noise from interference and other users using the same frequency, but not part of the group of radios intended to be heard. Usually the encode and decode tones are the same, but they can be different. This makes it possible for a frequency to be used by more than one group of people without hearing the other group's traffic. If two people from different groups transmit at the same time, there may still be problems, but often there is enough distance and difference in time, that a single frequency can be used effectively by more than one group. Many repeaters use tones to limit access as well. Only transmissions with the proper tone encode will be passed through the repeater.

For us listening on the scanner, it is helpful to know the tones a particular group uses on their radios, so we can identify and filter out channels for ourselves. The Uniden BC780XLT, BC785D, BC250D, BC296D, BC796D and some other scanners will search for squelch tones, and then if you want, you can choose to use those tones to hear only transmissions on a frequency with that tone. It helps to keep interference and transmission from other users from coming through on the channel you're interested in.
DCS=Digital Coded Squelch
CTCSS=Continous Tone Coded Squelch System
PL=Private Line(Motorola's brand)
DPL=Digital Private Line (Motorola's brand)
QC=Quiet Call
CG=Channel Guard (Ericsson/GE brand)
DCG=Digital Channel Guard(Ericsson/GE)

As Brian Scott and a couple others have been pointing
out, skip has been great recently, especially early morning
and into the late night hours, so everybody enjoy, and take
advantage of it. And make sure to post what you hear!...:)

This morning I am hearing the controller side of the
discrete UHF frequency (351.85) for Ft. Worth Center
on their Ardmore comm site. This from my discone on
my 2nd floor balcony. Not bad.

This frequency is used very heavily for military aircraft
just north of the metro.

From FWPD:

Due to an extremely large amount of Fort Worth Zoo traffic, I30 both directions is backed up. I30 West bound is backed up to I35. The Zoo has advised their parking lots are full and to seek alternative routes and parking for the zoo. The back up is causing significant amounts of minor traffic accident and is creating a safety hazard. It is requested radio stations broadcast this information as quickly as possible to help eliminate traffic congestion.

I went past the exit to the Dallas zoo earlier this afternoon - the southbound exit was backed up a half mile, slowing freeway traffic to a crawl.

I was hearing this too yesterday. The traffic sounded horrendous. I didn't check to see (online) but I was wondering what in the world would've been going on at the Zoo to cause so much road congestion and traffic?

I also noticed Commander 103 was involved with the CWPS-1/5616 ops. I don't think I've ever heard a Commander (Lt.) during the days on FWPD's radios. These guys have always been working from 8-9 PM at night until around 5 AM from my listening experiences. I wonder if this is something new that FWPD is doing or if they've always had Commanders during the day but I just never heard them?

Thanks Joseph,

ARRL membership in works. Following your tips I now have successfully soldered my first battery pack together. I didn't use tabs, just soldered wires to the cases following the original polarity and plenty of flux. I checked carefully and found no ill effects either mechanically or electrically.

Thanks again for the info.

Sarge

Subject: Re: [dfwscan] Battery packs

I have soldered some together for my Pro-90. They were radio shack nicads. It was a bit difficult this second time around. I used the original tabs and you have to maintain the shape and polarity of the original pack. I wrapped it in 2 layers of electrical tape. I also made a little pack for the cordless phone. They appear to be good solid joints. I believe I used a 40w iron.

Have you joined the ARRL yet? You can browse old articles on their webpage and attached article is about repairing nicads. The author says not to solder directly to the cell. I guess you can buy cells with a tab already attached.

Here's a secondary question in regards to WCSO's use on 158.805/131.8. While listening tonight, I noticed that when the channel is closed for emergency traffic (i.e. unit out on an open door) there is a "beep" about every 2 seconds over the air until the channel is opened back up. I've never heard this in any other transmissions before. I'm guessing the SO units aren't hearing it. I wouldn't want to be walking up to an open door on an alarm call with my radio going "beep" every 2 seconds.

Has anyone ever noticed this or have any idea what this periodic beep may be? It has to be using the 131.8 PL tone for me to be hearing it so I'm not sure how it'd be muted by a real radio (or if it even would be).

I used to work for Wise County, although it was many years ago. As I would get into Tarrant County, Cedar Hill would overpower Wise County on 158.805. Since then, Lancaster has taken over that frequency from Cedar Hill, and that is certainly within your earshot, but they are using a PL of 136.5, so that probably wouldn't be what you are talking about. There is no other Texas licensee showing on RadioReference using 131.8 besides Wise County.

As for the beeps, I rarely get up north to hear Wise County anymore, so that is news to me. I agree, that I sure hope that the beep is not audible to the deputies! That would be as bad as Watauga, where their idiotic CWID blasts every half hour, and used to be audible in the field.

Thanks for the info Rob. I recently created a new System for my 396D of the new Watauga frequencies (they were new to me...I hadn't been keeping up with them since their 1 frequency days). I now see how the CWID does not even get heard many times by agencies. They do not use the PL tone when broadcasting the CWID. So units don't even hear it I guess (since they are using the tones). I remember in the 1980's where everybody was ID'ing on Intercity every half our or so. It's funny thinking back on that because nobody does it anymore (well, very, very few).

Yes, I definitely ruled out Lancaster and I have found nobody in Texas or Oklahoma thru the FCC database and RR.com that fits the profile of the other agency with the same frequency and PL tone as Wise County. I've been looking for this user for at least a year or three. I only get them when the skip/ducting is good. After my e-mail to the group, it probably wasn't even an hour later and I wasn't picking them up very well anymore. I'm really starting to think they're an Oklahoma agency but it's still pure speculation with no real hard facts.

Thanks for the help Ron...

Las Vegas uses that beep system. It lets all users know that the channel is closed and avoids what you hear with Ft Worth ("Channel open?") In reality most officers entering an open door turn their radio down a little bit, but there is still traffic on it. I like what Mansfield does. Instead of closing the primary channel, they will close channel 2 and all of the officers on the incident in question will go to channel 2. A lot less chance for extraneous traffic coming through.

While listening tonight, I noticed that when the channel is closed for emergency traffic (i.e. unit out on an open door) there is a "beep" about every 2 seconds over the air until the channel is opened back up.

I will concur with Rob, in that, other cities I've lived in,
some agencies will do that. Much better than having the
dispatcher having to say to every unaware officer trying
to get an NCIC check "emergency traffic only - this
channel is closed!" every two or three seconds.

> I like what Mansfield does. Instead of
> closing the primary channel, they will close channel 2 and all of the

Lewisville PD will do that procedure a lot, freeing up the
primary dispatch channel. Units will switch to NCIC channel
or CID 1. However, on the chase the other night, everything was
on main dispatch. And I think the reason for that was, if other
agencies were involved that had 800 radios, more than likely,
all they might have was the main dispatch channel, and not the
tacts, etc.

For fire though, everyone around here has everybody else's
fireground channels, etc. I have to congratulate the FD's in
southern Denton County...they have their s**t together!!...
They help each other out...teamwork...name of the game...
on any large incident....I'm am very proud to be protected by
the firefighters and medics here in southern Denco....many
personal friends, and people on this list from my area....you
guys (and a few gals) get my utmost respect and appreciation
for what you do..., and you do it damn good.

Thanks for all of the on-list and off-list replies. Everyone has pretty much said the same thing. One off list officer mentioned some agencies allow the dispatcher to control the beep (whether or not to use it). So, if there is a situation where the officer may need the quietness (I'm not sure if the radio's volume controls the beep or not) the dispatcher could use the common "channel is closed" method. It's interesting to me that in the almost 30 years of listening this is the first time I've heard this. Thanks for the feedback everyone.

Also, it sounds like Mansfield does what Fort Worth does once an incident turns into an ongoing ordeal. Fort Worth PD will move units to their respective division's Talk 1 channel. And when there are multiple incidents, they will use either Talk 2 or 3. And when the incident requires a dedicated dispatcher the PD assigns a "Monitor" to the channel. It really works well I think. They'll still close the Patrol channel during a pursuit or whatever is going on, but if it looks like it could take a while, they'll almost always move to a Talk channel.

This reminds me of one other thing I saw within the last year. Since Tarrant Co SO has changed their channel names and radio lineups for their patrol units, they've added the Fort Worth PD division Patrol channels and each division's Talk 1 to one of their radio zones (like a bank or system we switch to in our scanners). Even though TCSO seldom comes up on a FWPD channel, they can when they need to. And if the incident needs to be moved to Talk 1 they can switch with the other units. I think this was a smart move on somebody's part at the SO.

The issue is the exit to University from West bound I-30. There is no room for ANY medium to high volume traffic to get to the exit without clogging up the entire right hand lane of I-30. When people get stuck in that lane not intending to exit, they have no choice but to jump out in other lanes causing slow downs and backups. That exit just wasn't designed to absorb the influx of illegal immigrants and the other plethora of 3rd world people flooding Fort Worth and the white house...

In case anyone is curious, the proper name for
"the beeping tone on a closed channel" is a Marker Tone.

Its console-generated and the dispatcher(s) have a button they can hit to
start it up when they close the channel for emergency traffic and stop it
when the channel is reopened.. assuming the button doesn't get stuck.

Teens using alcohol and a torch to light a fire when it flashed. Heard reports on a 16 yr old with 60% and a 15 yr old with 20% burns. Busy night, another helo from an unrelated event went to Baylor saying 5 helos were inbound to parkland from this and other scenes.

I did hear something on an unknown user (by me) simplex channel but I didn't know where the location was. It was late night/early morning I remember and I was searching the VHF band listening to skip. I came across 154.5725 where there were 3 or 4 mobile units (wrecker drivers, taxi drivers, police, I have no clue) on Loop 820 passing through the White Settlement and Saginaw areas. They were cussing like sailors and were not using a PL tone. I wasn't 100% sure I heard them right when they said it was a jumper, and even still, I had no idea what or where they were talking about.

This is probably not any help on details but I did hear it mentioned.

This was a suicide, and an odd one. A Fort Worth officer driving by North bound over the Lake Worth Bridge on loop 820 see's a man with birthday balloons standing near the edge of the bridge overlooking the water. The officer stopped and pulled back towards the man and witnessed the man jump off the bridge feet first into the water. Air one could find nothing, Fire Dept. dive team found the body within the hour of the jump near the shore.

In addition to the frequencies at the link below. I also monitor 454.075 and 463.3 which are LTR channels. You'll occasionally hear more than Careflite there, but it's not too bad. 464.1 is probably the best single frequency to monitor CareFlite, but you'll probably want to monitor PHI as well, since they do a lot of business in the area too.

...
Dallas Police Department dropping police code for plain English
By ERIC AASEN / The Dallas Morning News

Catch a cop show over the past several decades and these strings of numbers barked over police radios might sound familiar:

"1-Adam-12, a 4-15 fight." ..."We have a 9-11. Armed robbery in progress."

Or in the words of the bumbling Barney Fife: "Mayberry Unit No. 1 over and, uh, Roger. Roger. Out and under. 10-40. Bye."

But many real-life police departments are ditching the digits, replacing the lingo with plain English.
In Dallas, that means so long "7," hello "minor accident."

Today, the Dallas Police Department moves to a new plain-language system that's supposed to make communications more universal and less complicated. No more of those distinctive radio codes or signals.

The department says it's following a nationwide trend, but some call it the end of an era.

Others say the switch is no big deal. Many Dallas police dispatches already include plain language because it's simple.

"It's a no-brainer," Dallas Police Senior Cpl. Herb Ebsen said. "It's just common sense. If we start speaking in codes, you have a real chance for a problem or misinterpretation."

The switch became more prevalent after Sept. 11, 2001. During the terrorist attacks, different agencies had problems communicating because they used different codes or their signals had varying meanings.

Federal officials require that plain language be used during major disasters and exercises that involve several agencies or jurisdictions, according to a 2006 government alert.

"There simply is little or no room for misunderstanding in an emergency situation," the alert stated.

Dallas has used a signal system for several decades.

A minor disturbance is a 6, while a major disturbance is a 6X. A major accident is a 7X. An officer wanting to grab something to eat? That's a 50.

Got that? 10-4. (Understood.)

Dallas police acknowledge there could be a slight learning curve for some officers and dispatchers. But they don't anticipate issues, especially because the department already has practice using plain language.

When Dallas housed Hurricane Katrina evacuees, several agencies used the same radio system. So, the departments "had to take care to use terminology that we would understand," Dallas Police Lt. Chris Aulbaugh said.

In a crisis, the codes tend to go out the window, Ebsen said.

"Officers who have been there a while learn pretty quickly that if something big is going on, just talk plainly to say what's going on," he said.

Michael Calhoun, a Dallas police dispatcher, said there will be some other benefits to dropping the signals: Rookies probably won't have to memorize all those codes.

"It'll make their lives a whole lot easier," he said.

So, let's put Calhoun on the spot. What does 22 mean?

Animal incident, he said, without hesitating.

How about 34?

Suicide.

And 11?

Burglary.

In the 1930s, so-called 10-codes were used to relay details quickly because police radios had only one channel, according to the International Association of Chiefs of Police.

Through the years, departments developed their own unique codes or signals that were different from even neighboring agencies. So one department's 10-13 ("officer in trouble") was another department's "request wrecker."

Police officers also have different ways of saying things.

When East Coast officers say "collar," they mean arrest, but in Nevada, officers say "rip," said Tim Dees, a retired police officer and senior editor for lawofficer.com, a law enforcement Web site. With many agencies working together, "if you use the wrong word in the wrong context, people will look at you funny," he said.

As hard as agencies try to scrub out codes and signals, it will be difficult to extinguish something that's been ingrained for decades in police forces, Dees said.

"It becomes a matter of pride to use that and to know what those things mean," he said. "There's always going to be an element of jargon there. I expect you'll hear it occasionally creep back.

"That's the way that cops talk."

29842. Car in building in downtown Fort Worth?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-23 13:47:13 UTC
From: Brian Rodgers
Topic: 29833 Message: 29842

Was anyone doing any scanning Friday night? I was driving down Houston (I'm pretty sure it was Houston) near the convention center, and came up on a big ruckus. Turns out there was a tow truck pulling a car out of one of the shops there along the side of the street. This car had to have been moving, too, because it was completely inside the business. I kept an eye out for it on the news, but I never saw anything, so I was wondering if anyone else had any info on it.

Definitely does do LTR. It's GRE's replacement model for the Radio Shack PRO-97. It will handle re-banded systems and also includes the 700MHz band (which without digital is worthless but more a gimmick). I bought one about 9-months ago and really like it. It will not do digital however, so keep that in mind. But for the sale price of $169. that is not a bad price for a modern handheld conventional scanner with alpha tags, CTCSS and DCS tone code decoding and encoding, and excellent sound quality. You can also use the WIN97 program by Don Starr. The comparable model made by Uniden for Radio Shack, the PRO-162 is a good scanner also, but there are only two programs available for programming it, and both are severely deficient.

Unfortunately plain English is not all that easy to understand sometimes. There are many accents that cause the words to sound different than what they are supposed to be. I am saying this from being on the side of the radio "enroute" to the call, and trying to figure out what they were saying. Fortunately we went back to using the "DPS 10 codes".

Is anyone else having problems hearing them lately? They seem to have lost a LOT of power. I live in Arlington, and I have trouble receiving them recently, even close to their transmitter site. No other system I monitor seems to sound any differently, so I don't think it is my antennae or radios.

Numbers are just as difficult to understand as words are. And codes don't replace individual words. They replace entire phrases, which are less easily mistaken. I'm curious what phrase you find to be so consistently difficult to understand that it requires a special code.

Isn't it just a little ironic that they are moving away from codes because "Federal officials require that plain language be used . blah blah blah" but these agencies still can't or won't talk on each other's radio systems. There was a time when everybody had intercity regardless of the band their agency used. In some cases that required two radios in the cars. Until every officer has ready access to common channels this will continue to be a problem no matter what language is used.

The Austin area has a system that cost $60 million, initially, and many more millions to add Williamson county. They are all on the same radio system and still won't talk directly to each other.

...
Dallas Police Department dropping police code for plain English
By ERIC AASEN / The Dallas Morning News

Catch a cop show over the past several decades and these strings of numbers barked over police radios might sound familiar:

"1-Adam-12, a 4-15 fight." ..."We have a 9-11. Armed robbery in progress."

Or in the words of the bumbling Barney Fife: "Mayberry Unit No. 1 over and, uh, Roger. Roger. Out and under. 10-40. Bye."

But many real-life police departments are ditching the digits, replacing the lingo with plain English.
In Dallas, that means so long "7," hello "minor accident."

Today, the Dallas Police Department moves to a new plain-language system that's supposed to make communications more universal and less complicated. No more of those distinctive radio codes or signals.

The department says it's following a nationwide trend, but some call it the end of an era.

Others say the switch is no big deal. Many Dallas police dispatches already include plain language because it's simple.

"It's a no-brainer," Dallas Police Senior Cpl. Herb Ebsen said. "It's just common sense. If we start speaking in codes, you have a real chance for a

problem or misinterpretation."

The switch became more prevalent after Sept. 11, 2001. During the terrorist attacks, different agencies had problems communicating because they used different codes or their signals had varying meanings.

Federal officials require that plain language be used during major disasters and exercises that involve several agencies or jurisdictions, according to a 2006 government alert.

"There simply is little or no room for misunderstanding in an emergency situation," the alert stated.

Dallas has used a signal system for several decades.

A minor disturbance is a 6, while a major disturbance is a 6X. A major accident is a 7X. An officer wanting to grab something to eat? That's a 50.

Got that? 10-4. (Understood.)

Dallas police acknowledge there could be a slight learning curve for some officers and dispatchers. But they don't anticipate issues, especially because the department already has practice using plain language.

When Dallas housed Hurricane Katrina evacuees, several agencies used the same radio system. So, the departments "had to take care to use terminology that we would understand," Dallas Police Lt. Chris Aulbaugh said.

In a crisis, the codes tend to go out the window, Ebsen said.

"Officers who have been there a while learn pretty quickly that if something big is going on, just talk plainly to say what's going on," he said.

Michael Calhoun, a Dallas police dispatcher, said there will be some other benefits to dropping the signals: Rookies probably won't have to memorize all those codes.

"It'll make their lives a whole lot easier," he said.

So, let's put Calhoun on the spot. What does 22 mean?

Animal incident, he said, without hesitating.

How about 34?

Suicide.

And 11?

Burglary.

In the 1930s, so-called 10-codes were used to relay details quickly because police radios had only one channel, according to the International Association of Chiefs of Police.

Through the years, departments developed their own unique codes or signals that were different from even neighboring agencies. So one department's 10-13 ("officer in trouble") was another department's "request wrecker."

Police officers also have different ways of saying things.

When East Coast officers say "collar," they mean arrest, but in Nevada, officers say "rip," said Tim Dees, a retired police officer and senior editor for lawofficer.com, a law enforcement Web site. With many agencies working together, "if you use the wrong word in the wrong context, people will look at you funny," he said.

As hard as agencies try to scrub out codes and signals, it will be difficult to extinguish something that's been ingrained for decades in police forces, Dees said.

"It becomes a matter of pride to use that and to know what those things mean," he said. "There's always going to be an element of jargon there. I expect you'll hear it occasionally creep back.

"That's the way that cops talk."

I know. I live in Richardson, and it amazes me that if an RPD officer needs to talk to Plano or Garland, the officer has to rely on the dispatcher making a phone call to relay the message. Yet the three cities jointly operate a police academy.

The FD's of each city, on the other hand, are a different matter. There are (at least) daily radio checks between Plano and Richardson, and the morning station radio checks for Richardson include Garland Stations 3 and 6, while Garland's include Richardson Stations 4 and 6 (I think, could possibly be 5). Yet they still don't use the interagency unit numbers. It's "Richardson Engine 1" instead of "Engine 401". But this is another example of plain English.

As for the codes going away, I agree. I remember a posting here some time ago with a link to a story in the news (Star-T?) about confusion over the 10 codes used by different agencies. The example was 10-13. In a couple of towns, it meant "assist motorist". Everywhere else it meant "officer down".

As incredible as it may seem, the tattooed fugitive with no shirt on, made it to a home last night on tin top road where he made contact with a home owner telling them he had been on a work crew and was left behind needing to get back home to Dallas. The people told him they would take him to Arlington but that is as far as they could go. They actually took him to Collins and I-20 where they let him out and it wasn't until they saw news coverage that they realized that was the fugitive. The ending of the story hasn't been released yet but is being written as we speak. Personally I would have let smith and wesson talk to this guy if he showed up at my home like that.

Amazingly apropos! Figured he had made it out of the area, but that a fellow banger had picked him up. When you are taught from as early as the crib how to lie; and lie, cheat, and steal as a general course throughout life, it is easy to put on an excellent performance and convince the unsuspecting to believe you. I've seen seasoned cops fooled by these guys, present company not excepted!!! This guy was probably no exception. I can't wait to hear the rest of the story!

If I were a Ranger I'd have some hard hitting questions about how this MS-13 character got away from these guys at this private transport company called Emerald Correctional Corporation. The driver was apparently inside the store ostensively paying for gas when the banger got away. If he had a partner, wonder where he was? Obviously, nobody was minding the van!

What gets me about this whole deal is the fact ALL media stations claimed he might be a gang member. There was absolutely no doubt by Weatherford PD, DPS, or PCSO that this guy was an MS-13 Level III gang member. Personally, with the reputation the name "MS-13" has associated with it (they are one of the worst gangs stemming from El Salvador's war torn country), I'd think that would be worth mentioning on the news.

I know every media outlet in the country has to worry about being politically correct and everyone is an alleged drunk after drinking a bottle of whiskey and then killing a family of four driving down the freeway. Still, it's a little frustrating when they have to say "alleged" when it is truly "confirmed".

I don't know why Parker County's PIO wouldn't mention this guy was a high level MS-13 member, and knowing Parker County, they probably did mention it to the press/media. But watching the 4, 5, 8, & 11 news reports on this story yesterday really made me sick and tired of hearing "he may be a gang member too". There was no "may be" to it.

This was an interesting event to listen to. The search for this guy in Parker County didn't give up (in their county) until 12 hours after it began almost. He escaped around 8:20 PM and the search went on until 7:55 AM. It's been a long while since I've heard a real manhunt with numerous tracking dog teams. I enjoy it when Parker County gets involved in something. They don't fool around and it's a bit like going back 20 years and listening to a real incident where they exhaust every option. Parker County (Weatherford too of course) even did the door to door checks.

I don't know if any of you have ever watched the "Gangland" series on (The History Channel I think) or not. It's interesting insight if you despise the gangbanger lifestyle and mentality the way I do. I remember two years ago, when it was a new series, they had an episode on some of the California prison gangs. They described how these inmates can take pieces of paper and unlock handcuffs. At first I was thinking "give me a break". But since then, I've learned this really is true in many, many cases. Heck, they can even make spears/knives out of paper that can actually kill or severely injure people.

One thing the media did not mention is the fact that the driver was inside paying for the gas while the tattooed MS-13 banger was fighting with a transport guard. That's how he lost his shirt and had on his pants and black tennis shoes only.

I'm just dumbfounded that (1) somebody would open their door to this guy and (2) they'd give him a ride to Arlington. They're lucky the escapee didn't have a weapon (must not have been any newspapers thrown yet :)) or flat out kill or carjack them for their car anyway.

Even though the escapee didn't have a "violent history" in his crimes (they were probably all deferred adjudication type deals), there's always a first. The fact that he was even with MS-13 is proof he's committed violent acts even if he wasn't caught for them. Just his mug shot alone causes the brain to pop into "avoid this person" gear I'd think.

If I were a Ranger I'd have some hard hitting questions about how this MS-13 character got away from these guys at this private transport company called Emerald Correctional Corporation. The driver was apparently inside the store ostensively paying for gas when the banger got away. If he had a partner, wonder where he was? Obviously, nobody was minding the van!

As incredible as it may seem, the tattooed fugitive with no shirt on, made it to a home last night on tin top road where he made contact with a home owner telling them he had been on a work crew and was left behind needing to get back home to Dallas. The people told him they would take him to Arlington but that is as far as they could go. They actually took him to Collins and I-20 where they let him out and it wasn't until they saw news coverage that they realized that was the fugitive. The ending of the story hasn't been released yet but is being written as we speak. Personally I would have let smith and wesson talk to this guy if he showed up at my home like that._,_._,___

Topic: 29855 Message: 29864

Lets be completely clear about some of the reasons why certain details are broadcast as FACTS, and some at the time of broadcast are ALLEGED. I'll leave out the argument over whether you like or dislike the process because it's subjective and legally irrelevant.

Random Example: "One man is dead, and 3 are injured in an alleged drunk driving accident in Dallas tonight."

We can KNOW we have one deceased, and we can KNOW 3 are injured, but there has yet to be developed an instantaneous, on site, defendable in court, way of determining that a person's blood alcohol level would enable you to change a script from "ALLEGEDLY driving while intoxicated," to "was determined to be DRUNK at the time of the crash." Another analogy could be that I could sit here and ACCUSE you of being ignorant for not knowing the legalities and reasoning behind why a script is read the way it is on TV, when in FACT you simply may not completely understand. Not understanding a process does not make you an idiot. Make sense ?

In regards to the escape story, if I'm not mistaken everyone mentioned ties to being a gang member, but it would be anywhere from irresponsible, to completely ignorant to mention the "MS-13," gang name. These little rodents WANT the publicity, thats why they get the tattoo's, it's why they throw the specific gang signs, it's why they "tag," (spray paint) the gangs name all over the place etc, and an INTELLIGENT and RESPONSIBLE local media outlet would never give them the satisfaction of mentioning the name of the gang on "TV."

I too wish we could all get on the air and say how we really feel and tell people exactly how WE see it backed up with our "opinions". Ratings would go through the roof. But that wouldn't be news, that would be a talk show.

Again with the pissing contest? I assure you that the general public is not concerned with the guy being a gang member. That he was behind bars in prison and was suddenly free caused enough concern for Joe Public to be on the lookout. The media reported the story. I don't wear a badge, and I have much respect for those who do, but I fail to see why these conversations tend toward childishness when opinions vary. Grow up.

Niki I find this group to be for the most part above this sort of thing, but in all large groups of people there will be one or two who seem to have this animosity or pent up anger that often gets magnified and more intense on the internet. If you try to engage in a dialogue with someone who has this affliction or even to just try pointing out how ridiculous it is in an effort to stop it, you'll probably be left shaking your head. For me, I just ignore the 800 pound gorilla in the room and eventually it will drive him nuts and transform an otherwise annoying experience into a comedy routine..

Niki, I couldn't give a rats about the details of the prisoner.
Truth be told, I couldn't care if 100 prisoners were
on the loose out there. It's not near my house, so I
could care less. I just want to know what media outlet
this person works out of, simple as that. They are new
to the list, and I would like to know where they hang their
hat professional wise, that's all. I think that is a fair request
since I used to be in media. Perhaps I know them.

There are numerous media people current and former on
the list, but this person seems to want to hide behind
the "producer 5, 6, 10 namesake" and not identify themselves,
when giving the details of a NEWS story.

Someone at Arlington FD (or maybe even DFW Comms) is at the new Cowboys Stadium testing walkie talkie performance at various locations. They're calling out exactly where they are in the stadium as they transmit on AFD channel 8. Not terribly exciting, but interesting to see how well it's going to work.

I'm pretty disappointed that you would interpret Blaine's question as a "pissing contest". He simply asked the guy -- for the second time -- who he was. And Blaine is not the only one wondering. It's not an attack on the guy, or any kind of pissing contest. It's just curiosity. Many on this forum are pretty tight knit, especially those of us who are or were in the news media. None of us have had any problem identifying ourselves in the past, so it is just a little unusual that our new friend here would. It just makes me wonder if he really is hiding his identity, or simply trying to piss Blaine off, lol.

Regardless, both had their say on the escapee matter, and both made good points. I don't see a problem with that. Let them hash it out. Nobody needs you to referee things here, or to tell anyone to grow up. It just creates more drama. Let it go.

Hello all -

I was recently advised by a very good scanner
friend of mine that he was not able to download
my frequency list from my website because it was
just showing gibberish. My sincere apologies to
those that have tried to do that recently. I have no
clue why it was doing that, so I'll blame it on Verizon.
Anyway, it has been fixed, and the file has an .xls
extension, so should work great with Excel, or
Open Office (like I use).

So anyway, download away ...and enjoy.. my scanning
comrades!!

Here's my webpage link:

http://mysite.verizon.net/resrjsf6/

(yeah, it's a crazy one because it's free, and I
don't want to pay for a commercial site - I'm
cheap...:)......

Go halfway down for the link to the frequency database

Blaine

29874. Unusual traffic on Oncor system

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-03-28 01:29:31 UTC
From: Tom ND5Y
Topic: 29874 Message: 29874

The past few days with the storms and wind I have been picking up a bunch of new talkgroups on the Oncor system here in Mineral Wells.

Usually the only talkgroups I hear are 196, 195 and 168 with the local and West Texas traffic and 129 and 130 from Tarrant County.

Now in addition I am hearing talkgroups 86 and 89 with Dallas and East Texas trafffic, 224 with Killeen and Round Rock traffic, and 140, 141, 145, and 160 that aren't in the RadioReference database and I haven't figured out their locations yet.

From what little I know about wide area EDACS systems, the only way I should hear a talkgroup is
if a radio on the local tower near me is tuned to that talkgroup. Is that correct? Can EDACS radios scan multiple talkgroups and make them all come out on my local site?

I thought maybe they set something up so that certain talkgroups come out at all sites, but then I noticed the only other site that I can hear, Jacksboro, has none of this traffic on it.

Does anybody have any idea why this is happening?

Tom ND5Y

> freq is now assigned as a USAF C2 nationwide, so my best guess is Randolph.

Thanks Larry

> Your 239.525, is one of my spectrum holes.

Actually it is 239.575, but perhaps that was a typo on your part.
I'll definitely keep an eye on it. If it was associated with TSTC,
I wonder why the pilot was asking a/a about the college in Waco.
Seems like he would know what facility he was flying out of if it
was indeed associated with it. So my guess is a discrete air to
air for some squadron. Who? is the question...;)

http://en.wikipedia.org/wiki/Dallas,_Garland_and_Northeastern_Railroad

That's probably just a renewal, but I don't recall ever hearing of that railroad before. Since they use DART lines, it might be worth keeping the frequencies handy.

Prosper

854.1625 and 854.1875

DGNO is a short line railroad.
http://www.uprr.com/customers/shortline/lines/dgno.shtml They do a lot of local deliveries in the Dallas area. Dallas Co has some conventional 800 channels for jail ops and that would be my guess on that.

Terry

Interesting license activity this week including.

Southlake license for 854.0125, and it looks like it will be an additional frequency for the Northeast Tarrant system. Can anyone else confirm?

http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=3089397

Dallas County 858.0875

http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?freqType=E
<http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?freqType=E&licKey=1174395&pageNumToReturn=1> &licKey=1174395&pageNumToReturn=1

I don't have that one in my frequency list. Anyone know what it's used for?

Dallas Garland & Northeastern Railroad Co.

Several frequencies

This is licensed to Southlake but the repeaters are located at the 3 sites of
the NE Tarrant County trunked system so I think it is a new channel for that system.

For the analog non-trunked frequencies listed, is there info on the sub-audible tone hidden in there somewhere?

for example...

ROFL! Good point! They ought to either be suing the crooks that sold it to them, or firing the idiot that bought it. Or both! Even the conventional channels sound absolutely horrible, like every person transmitting is in a WWI airplane with no windows.

But back to reality, every now and then, I am hearing the same voice yelling something unintelligible on the same channel (155.925). Now I'm wondering if this isn't a fluke of propagation with a co-channel user with the same PL somewhere.

CNN reporting multiple deaths and some degree of premeditation (based on the shooter blocking an exit with his vehicle)
Shooter described as Asian.

Obviously a fruitloop, but with all the new left wing agenda in America you can certainly expect more and more and more of this type of carnage from Americans completely fed up, and or 3rd world immigrants to whom this type of behavior is just typical day to day problem solving.

Appears you're correct. Here the press release:

Trevor Rotzoll (W/M 26 years of age of Grapevine) was located and recovered at about 4:52 pm today near the breakwater at Silverlake Marina (Grapevine Lake) by Grapevine Fire Department Divers. He was found by the Texas Parks and Wildlife Wardens using sonar equipment.

Rotzoll was reported missing and believed to have drowned on Saturday, 3/29/09 at 4:48 pm after his canoe capsized near the marina.

His remains were transported to the Tarrant County Medical Examiners Office. Rotzoll was positively identified by TCME Investigators. There are no indications of foul play.

29904. Brush fires in N Tarrant or Wise County?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-05 02:12:07 UTC
From: Blaine Brooks
Topic: 29904 Message: 29904

Was driving west on FM 407 in Lewisville this early evening and noticed a HUGE smoke cloud on the western horizon. Just wondering what it was from, or if anyone had heard anything - fire department wise?. Figured it was a gigantic brush fire burning somewhere, but I never got a page on IPN, if it was that significant.

Speaking of fires - rarely does Lewisville get a 5 alarmer. That was a doozy of one this morning. Good job on all the LFD crews and many mutual aid out there getting that baby knocked down, cause it was a smoky mess! Had considered going to the scene, but stayed home like a good boy. Got plenty enough action on the scanner!

that is a 1000 acre fire in Jack County. It was severely threatening the town
of Joplin as of 20:00 hours and they were evacuating the town. One occupied
structure had already been lost with 12-18 others threatened. This fire
started on 4/2 and was 80% contained today at 200-300 acres. It broke
containment about 1600 this afternoon and grew into the large fire you saw...
Wise County has sent some units to assist in defending Joplin. Haven't heard
much in about an hour...can't actually hear Jack County from here.

You probably saw the huge fire in SE Jack County.
There were several forest service aircraft working on 122.925, 151.385, 154.265 and 154.280 until the sun went down.
Also heard them bring in a heavy air tanker from Alamogordo, NM and some Texas Forest Service trucks on 159.285 passing through town on their way up there.

TFS has a cool Google Earth file that shows active and recent fires:
http://tfsfrp.tamu.edu/wildfires/FireActivity.kml

I'm off today and was notified at 2:20 AM of the Denton County task force callout. My volunteer department (Double Oak) sent a Brush truck with 3 personnel. Also going was Lewisville, Flower Mound, and 3 other brush trucks and a tender from FM along with the Denton County Fire Marshals Office. Last word is the fire is now 2000 acres. I have not heard anything on how the town of Joplin fared overnight. Our units were supposed to meet in Denton at 7:30 AM and respond as a group so they should definitely be there by now and are supposed to remain out there all day.

I was out at Six Flags Over Texas yesterday and I was able to confirm that they are still use all 7 of the frequencies they been licensed. From what I can tell channel 4 they will switch to when they want to get off one of the 3 main channels. Channel 5, 6 & 7 are rarely used it seems as channel 4. Yesterday there was a power failure at the park and my friend and I just happen to be going up the hill on the Texas Giant. We ended up getting stuck halfway up the first hill and eventually had to let us out roller coaster car and make us walk down the hill.

Based on some comments from 660 (Dallas Fire Dispatch), that appears to be bleedover from the SWRCC trunked system, MPT-1327, which included Duncanville, Desoto, & Cedar Hill. Several of their frequencies are shoe-horned in amongst, or right next to, DFR, DPD, & other, area dept's assignments:
http://www.radioreference.com/apps/db/?sid=5155

Duncanville is working a possible barricaded suspects (plural intentional) incident at a Dollar General store, Clark & Danieldale Rds. Possibly a couple of suspects from a robbery attempt inside.
http://www.wfaa.com/sharedcontent/dws/wfaa/latestnews/stories/wfaa090405_mo_standoff.a86c0c91.html

There has been a little activity on their old vhf frequencies, but most of it apparently on the new system. Dallas, I believe, has a voter receiver on the communications tower at fire station 12, not far from the site.

Speaking of Duncanville PD's 158.79 VHF frequency, I heard them using it this morning. It had a long, single, continuous tone on it for a while and was really messed up sounding. Before I tuned away they were talking on it.

I guess I haven't paid much attention and noticed they were on the SWRCC system. So they don't use 158.79 much anymore?

29916. 155.100 PL 100.0

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-06 06:08:30 UTC
From: commscan
Topic: 29916 Message: 29916

Hi Group,

I've been trying to confirm who uses 155.100 MHz with a PL of 100.0 for over a year. I don't usually hear this agency too often but I am tonight. I have cross-referenced RR.com data with the FCC database and my own PL tone database too. Here's what I have confirmed through the years in Texas myself on 155.100. There's no doubt some of this data is going to be outdated and old I'm sure! Actually, I just deleted a few entries I know are no longer good.

Cute & Paste:

155.1000 Angleton PD/EMS [Dispatch]

155.1000 Bastrop Co. SO Ch. 2

155.1000 Bastrop PD Ch. 2

155.1000 Burnet Co. SO [City Dispatch]

155.1000 Claude [Public Works]

155.1000 Hays Co. SO

155.1000 Navarro Co. SO

155.1000 Palo Pinto Co. Civil Defense/EOC

155.1000 Tyler ISD [buses/schools]

155.1000 White Settlement FD/EMS Ch. 01

155.1000 Wichita Co. [County Commissioners] [WQH459]

And here's what I have PL tone wise

Cut & Paste:

155.1000 100.0 ?

155.1000 123.0 ?

155.1000 156.7 White Settlement FD/EMS Ch. 01

155.1000 82.5 Navarro Co. SO

155.1000 103.5 Venus ISD

155.1000 162.2 Palo Pinto Co. EOC/Civil Defense

No telling if this cut & paste data will turn out looking right when this hits the group. I think it will and hope it does.

There's also another user (I'm not hearing tonight) on the frequency I haven't tracked down that uses the PL tone 123.0.

Does anyone know who either user (the 100.0 or 123.0 users) may be?

Thanks.

Brian

29917. DTMF bursts on 154.385

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-06 08:58:29 UTC
From: rob.davis@armynursecorps.com
Topic: 29917 Message: 29917

Does anyone know the source of the annoying bursts of DTMF tones that are transmitted occasionally on 154.385? I forget the name of the bursts, but they consist of about ten DTMF tones firing off within a one second period. Some sort of telemetry, I'm sure.

The users I show on 154.385 are Waxahachie Fire, Murphy Fire, and North Hood County Fire. Waxahachie is the only one I can actually receive here in Mansfield. And the DTMF bursts come in with a little static, so they're not terribly close to me.

While we're talking tone bursts, does anyone have a link to that website that has all the recordings of different digital signalling, with descriptions of what they are? I lost that in the last crash of this crap-arse Mac.

Rob

29922. Stereo headphone output

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-06 17:16:08 UTC
From: Blaine Brooks
Topic: 29922 Message: 29922

I'm sure there is a simple solution for this, but
I'm just stuck as to what adapter or cable I
need. I want to branch off the mono audio from
my PSR-500 into STEREO audio. Right now, I
have it hooked up to the sound card on my
computer but only have audio on ONE speaker.
I'd like it on BOTH. I'm pretty sure I have a
STEREO cable, but the output from the radio
is MONO.

Hey Blaine, you just need to make a quick stop to Radio Shack. You are looking for a Mono to Stereo adapter. It is an inline adapter that plugs into the mono socket of your scanner. It is about an inch high. You then plug you stereo connection into that.

Many thanks Chance. I knew it was a simple solution, but
darn if I could figure it out. Didn't have enough caffeine
this morning/afternoon ! Thanks Bud!...

29926. Richardson Rebanded this morning.

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-06 18:47:05 UTC
From: Jay Pinkerton
Topic: 29919 Message: 29926

It works. And the volume is lower. Great!! It was low before. Now
even worse.

Anyway if you have Richardson in your scanner, you need to update. Looks
like an old trunking scanner might still be able to pick this up as the
spacing is 25Mhz and on the even numbers. My BCD396 Works with it.
I'll have to try my BC246.

29928. New talkgroups in Arlington and Ballpark

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-06 19:13:42 UTC
From: Ben Saladino(YG)
Topic: 29928 Message: 29928

Here's what I've got for new talkgroups heard during the Rangers opening day

58352 heard a 6## unit calling for someone, but didn't hear a response
58448 "F1" traffic control
58480 "F2" traffic control
58512 I'm guessing "F3" - VIP motorcade/escort
58928 Fire/EMS ops

On the Ballpark's LTR system I heard a couple of new talkgroups, at least
they were in my scanner
1-19-070 - talked about "six shooters", fireworks, etc. I believe this is an
entertainment type talkgroup.

1-11-010 - sounded like video camera production stuff, I imagine for the in

- stadium jumbotron an TVs

One of the few things I like about EDACS, is that rebanding doesn't require anything other than reprogramming (in the right order) the frequencies in your scanner. It's the Motorola systems that require firmware updates on scanners that support it.

My old 245xlt made the trip just fine, loaded the new freqs using the old bc245int freeware.

The bc246t took the new freqs directly from FreeSCAN. I had applied the new firmware but I can't say that it was needed for this particular rebanding.

Hey, my old Radio Shack Pro 95 works on Richardson's new rebanded frequencies. So if this old thing works, then most trunk tracking scanners should work. If they worked before, they should work now.

From: Tom ND5Y
Topic: 29917 Message: 29935

Mineral Wells and Hurst both use bursts of DTMF tones to control the outdoor warning sirens. I don't know what kind of system it is but every few days the one here polls the sirens or something.

Tom

rob.davis@... wrote:
> Does anyone know the source of the annoying bursts of DTMF tones that are transmitted occasionally on 154.385? I forget the name of the bursts, but they consist of about ten DTMF tones firing off within a one second period. Some sort of telemetry, I'm sure.
>
> The users I show on 154.385 are Waxahachie Fire, Murphy Fire, and North Hood County Fire. Waxahachie is the only one I can actually receive here in Mansfield. And the DTMF bursts come in with a little static, so they're not terribly close to me.

From: Brent Willcox
Topic: 29917 Message: 29936

If this is very rapid fire DTMF with either no PL or a 118.8 PL on it, you are hearing the transmitter for the emergency sirens up in Lewisville.

The Whelen controller does a self test poll every day very early in the AM (2-4 AMish) and you'll hear the same thing on the first Wednesday of the month around 1 PM during the monthly siren test.

As far as I know the transmitter doesn't identify itself but the call sign is KWF636 and historically this was the VHF frequency Lewisville FD used back in the pre 800 days. When they brought up the 800 system it stuck around at first for pagers and today is only telemetry for the warning sirens.

I think this must be it. The timing is right, as it is always in the middle of then night. And the distance is about right for the reception strength I am getting. Hust would be a possibility. Mineral Wells would be too far away. The bursts go on for a full minute or two before subsiding. I guess it is polling each siren controller individually.

Thanks!

Duncanville, occasionally, will have PD traffic on the Vhf channels. During the early part of the incident last night, they were using both of their Vhf PD channels sporadically. Also will hear Cedar Hill on their old Vhf, 154.725 from time to time. Apparently, at least some of those radios are still in the units or as hand helds. I can't remember the last time I heard Desoto PD on Vhf. I think they were the first of the three to move to the new TRS.

The fire departments are still on Vhf, though. I've heard the tone you mention. Yep, a pain in the backside, especially if it kicks in the middle of the night.

29940. Hood County Fire

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-07 10:07:06 UTC
From: rob.davis@armynursecorps.com
Topic: 29940 Message: 29940

I have been monitoring a multi-alarm apartment fire at "The Cliffs" on Lake Granbury this morning. Every department in the county was either on the scene, or called to cover the rest of the county. They took fireground comms to "Indian Harbor Tac". Pecan Plantation, Cresson, and Granbury have their own frequencies listed at RR.com, but no Indian Harbor. Does anyone know of other fire frequencies in use in Hood County? Does anyone have a list of the unit number assignments for the Hood County fire departments?

Rob

They have 154.400 simplex licensed but nobody ever confirmed and submitted it on RR and I can't hear it from here.

Rob, Tom, & group,

Indian Harbor uses the same 'TAC' channel as Pecan Plantation,
154.130 PL 151.4

In addition to Cresson & Granbury, there are a few other 'TAC'
channels that are used. 'Station 70 TAC' is one, and I think
that Lipan VFD has a 'TAC' channel. And I believe that
'North Hood County VFD has a 'TAC' channel as well.

I don't have frequencies for any of those, but would like them
if some one has them.

Pecan Plantation's medic unit is Medic 80 I think ? Not sure of
the other departments. Geez, you would think I would now, seeing as
how I monitor Hood County all the time..... :)

Chris

Hi Rob, Tom, & Group,

I have Indian Springs VFD confirmed on 154.370 but I have no PL tone for them. I confirmed this a few years ago when down in the Granbury lake area. I can't verify that this is the case down there today but it definitely was approximately 4 (+/-) years ago.

Topic: 29916 Message: 29945

Thanks Brad. I had another off list reply telling me the same thing about Tyler ISD. The agency in question no doubt serves in the McClellan County/Waco area. In one call I heard on 3/20/09, there was an auto/ped at 4400 Harrison Ave, at the La Vega Primary School (all confirmed as correct information via the Internet), and the dispatcher is the only party heard. I do not hear mobiles. This one is unlisted on the FCC site (for down in the area mentioned) and RR.com definitely doesn't have it either.

I posted my message to the CenTexComm list and have been receiving some off-list replies. I still have a few I haven't been able to read just yet. But so far, there's been no joy on locating this user. Bellmeade, TX seems to be the closest city to this PD (I don't think it's an SO) that also dispatches for the FD/EMS. There were no tone outs for the auto/ped (kid with a broken leg) call. The dispatcher was heard saying something like "toning out EMS for an auto/ped..." She may have just been letting the PD/law enforcement users know what was going on.

I'll get this sucker tracked down eventually. Hopefully sooner than later...:)

I'm going to try to read some of the other off-list replies I got from CenTexComm's Yahoo Group members before my supper is finished cooking. I'll pass along the user if I can get them confirmed (and this is the 100.0, not 123.0 PL user...haven't heard a word on the 123.0 PL user).

Thanks for the feedback and reply Brad...

I know it is not Tyler. They use DPL 365 for 155.100.

Brian,

Just for clarification, did you mean Indian Harbor, or is there another department in Hood County called Indian Springs?

Granbury Base and Bravo 5 (as well as other assets) from the Texas State Forestry working 159.24/PL 225.7 and 151.46/PL 94.8. One is a repeater and one is the input I believe, but it's really hard to tell to be honest. It doesn't seem to be working this way. 122.425 was just passed to an air asset for communications with ground and other air assets on the fires.

Brian that is correct except for the typo.
TFS has two repeaters in the area on 159.42/151.16
Whitt 159.420 225.7 out 151.160 127.3 in
Granbury 159.420 225.7 out 151.160 94.8 in

Just heard Tanker 00 (Lockheed P3 Orion water bomber) on 122.425 I didn't hear what fire it was going to.

I went through Granbury on Sunday and heard 159.420/225.7. Also heard two simplex units on 151.160 however they were both using different tones (94.7/127.3)

They are assisting with grass fires in Western Hamilton County today as well.

Here they are on RadioReference.

http://www.radioreference.com/apps/db/?aid=87

I also have 159.45 listed as Tac 4 from previous fires. There are several lists out there with lots of frequencies, but it's not clear to me what's the most up to date and accurate.

Ben

TFS quit putting the daily Incident Action Plans on their public web site so as far as I can tell the current frequency list is the one Mark posted which probably came from here:
<http://tfsfrp.tamu.edu/toolbox/Download.aspx?ACT=FILE&NAME=G%3a%5cFileTransfers%5cWest+Texas%5c01-30-09+Air+Ops+Plan.pdf>
and the last IAP that I saw a couple months ago had the same ground and air-to-air channels plan that was used last year which is at the top of the RadioReference page that Ben posted.

Mystery frequency - 246.8

Several air units doing ACM, bombing runs, laser targeting...
very interesting.....thing is...I have no idea who uses this
frequency...signal good into North Texas....

Haven't heard any ID's....definitely a/a, and VERY INFORMAL..

Any help on a user greatly appreciated.

Yes, Tom is right, that is where the frequency list came from. The Department of Homeland inSecurity last year apparently started cracking down on subservient government organizations because it could be theorized afterall that young men between the ages of 18 and 45 with head coverings and possibly affiliated with groups like Al Ka Hey Duuuuhh are hiding behind every tree in the forest attempting to disrupt communications at fire scenes!!! You will see statements like the following in all the recent communications sections of Wildland Fire Ops Plans like this:
"Due to BLM Instruction Memorandum No FA IM-2008-006, and The Department of the Interior Radio Handbook, that states unauthorized interception, divulgence, or publication of radio communications is
prohibited and consistent with the Electronic Communications Privacy Act of 1986, Public Law 99-508, October 21, 1986. Due to this policy all frequencies have been removed from the Web Document. If you come to Durango, the hard copy will have all frequencies listed."

They must keep the paranoia level elevated folks so those federal dollars keep rolling in!
MC

Yep. Gotta watch out for those damn terrorists out there with AK's
and ski masks hiding behind the pine trees in the back woods of
Texas. Hell..., when are they gonna figure it out??? That ain't Al Queda.
That's bubba, his friend, and bubba's cousin he just married, going
for a Sunday stroll, and target practice in the woods...as they try and
protect their whiskey still, or marijuana patch. Wait...I hear Dueling
Banjos....

From: Ben Saladino(YG)
Topic: 29963 Message: 29963

Anyone else monitor Denton City's TRS?

I had not until recently with a new Uniden BC396XT, which pulls it in, where my other scanners did not. Anyway, I noticed the frequencies on RadioReference, and wonder if the 3 I have marked "not heard" below, have been heard by others as part of their system. Also, in one of Glenn Mitchell's recent weekly FCC license updates there were a couple of new frequencies. I haven't heard them yet.

http://www.radioreference.com/apps/db/?sid=22

The following 11 frequencies, I've heard as part of the system with talkgroup activity.
858.3125 control/voice
857.3125 control/voice
859.3125 control/voice
860.3125 control/voice
856.3125 voice
855.1875 voice
855.3625 voice
855.8625 voice
855.8875 voice
856.5875 voice
858.5875 voice

These 2 are new licenses, but I haven't heard them yet.
854.2375 new license, not heard yet
854.4875 new license, not heard yet

These 3 are old licenses and listed on RadioReference as part of the system, but I haven't heard them as part of the system.
853.0625 not heard
853.9125 not heard
854.5625 not heard

Hey Ben -

I monitor the City Of Denton system consistently, but
just FD. And with my GRE all I need to worry about
is putting the 4 control channel frequencies in, as
you have with your 396. Honestly, I have no idea if
those new frequencies are being used or not, as I
don't even keep tabs anymore with all the frequencies
of a system.

I'll try and run Unitrunker and see what it shows.

29971. Plane crash in Arlington

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-15 01:59:31 UTC
From: Officer LeClair
Topic: 29971 Message: 29971

I was going home and passing Lake Arlington Golf course when I saw the red and blue lights, with a fire engine on scene at the field on the north west field from Green Oaks and Pioneer Parkway (303), and was attracted like a moth to a light. Here is what I found.

Statement given by Lt. Chad Gann of APD:
At about 7:00pm, APD and AFD were dispatched to a downed aircraft in the field at the corner of Green Oaks and Pioneer Parkway. When units arrived on scene, the pilot was walking around and fully alert to what had happened. There was no hazmat situation to be concerned about. The pilot was quoted as stating this aircraft to be a "experimental" plane and was flying south, presumebly to Arlington Municipal Airport. The pilot, a mid 40's male, was later transported by ambulance, to John Peter Smith hospital with minor injuries. The FAA has been contacted an an investigation is possible. The pilot made his emergency landing and flipped the aircraft. Authorities on scene are awaiting the contact of a representitive from the Arlington Municipal Airport.

Nothing further at this time, keep an eye on your local news, I think Ch.11 will have the best coverage, they were first on scene and conducted the actual interview. Ch.5 and I think 8 were third and second on scene, and 4 was last to arrive on. The plane had a sticker on the tail that said "The United States of Texas" and the plane ID is N6DJ.

According to FAA, it's an RV-6. It's probably the most popular kit plane out there. I see them all the time. They're quite fast and a lot of pilots get behind the airplane.

[second attempt at posting this. It is curious that searching our messages for "richardson rebanded this morning" doesn't pull up any hits even though that's the title of the threadlet.]

Am I imagining things, or is the volume back up?

I use ScanRecord w/vox to tape CORichardson while I am away from the scanner, and the it seems louder and the waveform looks stronger.

Anyone else seeing this?

29974. Dallas Fire No Rescues

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-15 16:21:07 UTC
From: Andrew Tucker
Topic: 29974 Message: 29974

The past few weeks Ive noticed that Dallas is not sending MICUs on medical calls. They send an engine, but no ambulance. They used to do this on welfare checks due to the high probability of it being nothing. But now they are sending engine only on things like injured persons, strokes, heart attacks & suicides. The rescue doesnt even get dispatched until the engine is on scene and requests it. The caller has already waited 3 minutes for the engine to arrive, two minutes for them to make an assessment, and then the ambulance gets dispatched. Then it is another 5-10 minutes because the ambulance sent is never the first due. Engine 40 is on a stroke call right now, they came on and requested the ambulance and got Rescue 15 from the house. Why did they start this policy?

They are only doing this in a couple of select areas as a test. The engines that are involved in this have paramedics on that engine. They will stabilize the patient and start treating them while waiting on the rescue.

The real reason for this is that our rescues are running themselves to death and a high percentage of their calls do not require transport to a hospital.
Dale

Aren't most firefighters in the metro area trained
as FIREFIGHTER/PARAMEDICS/EMT? In other words,
can't the on scene engine handle a low priority med
call "first in unit", rather than having to dispatch a
MICU immediately? Personally, I don't see a problem
not rolling a box unless it is actually NEEDED for transport
of a patient. If the guys and gals on the engine can treat
and most importantly, evaluate the NEED FOR TRANSPORT,
I say more power to 'em...but of course, that is just my
opinion....:) The difference between rolling a box for a
nosebleed or headache, as opposed to a stabbing,
shooting, or MVA with serious injuries.

Part of it hinges on the desires of the Medical Director and the City Council. If they say "transport 'em all" then no matter what, that citizen will get transported, medical necessity or not (read Fort Worth).

From: steve@liese.us
Topic: 29919 Message: 29978

I didn't notice the volume being low so much as what seemed like low signal strength. Sitting right in the middle of Richardson, I was only getting partial transmissions and they were cutting out. It seems like it has gotten better, but I don't think it as good as before the rebranding. You are right, volume has always been lower on Richardson.

[second attempt at posting this. It is curious that searching our messages for "richardson rebanded this morning" doesn't pull up any hits even though that's the title of the threadlet.]

Am I imagining things, or is the volume back up?

I use ScanRecord w/vox to tape CORichardson while I am away from the scanner, and the it seems louder and the waveform looks stronger.

Anyone else seeing this?

My feeling is that this test area is quite limited. One has simply
to look at "Dallas Fire-Rescue Active Incidents" (
http://www.firerescuephotos.com/fa/) to check medical calls with no
Rescue unit assigned. At this hour of evening, only two incidents
have no Rescue assigned. Both of those are vehicle fires.

There are some differences. One huge one is why send a $500K fire engine with 3 or 4 firefighters when $120K ambulance with two guys would work. Not only can they handle the emergency but transport if needed as well. Also some of those mundane calls like victim is sweaty and says he doesn't fell well could very likely turn into a heart attack call. Not a big deal unless it's you or someone you care about.

Also in Dallas firefighters I know have let their medical certifications lapse as soon as they can. It's to only way to ensure they don't get stuck on the ambulance so there are not as many trained (certified) paramedics as you might think.

Hopefully that will help you see the problem.

Terry

Aren't most firefighters in the metro area trained
as FIREFIGHTER/PARAMEDICS/EMT? In other words,
can't the on scene engine handle a low priority med
call "first in unit", rather than having to dispatch a
MICU immediately? Personally, I don't see a problem
not rolling a box unless it is actually NEEDED for transport
of a patient. If the guys and gals on the engine can treat
and most importantly, evaluate the NEED FOR TRANSPORT,
I say more power to 'em...but of course, that is just my
opinion....:) The difference between rolling a box for a
nosebleed or headache, as opposed to a stabbing,
shooting, or MVA with serious injuries.

I can see both sides of the issue, so that's why I'm
remaining pretty neutral in my thoughts on this issue.

St. Louis had a problem with firefighters and first responders
many years ago. The firefighters just wanted to do fires. They
had absolutely NO desire to be EMT's as well, and shunned the
training the city wanted them to have. I knew firefighters, batt
chiefs, and EMS workers and admin when I lived there, and let
me tell you, it was like listening to battle plans between Lee &
Grant. It was a real battle between the firefighters union, the
ems folks (which was a separate division), and city hall.
Eventually, after many salvos back and forth over a couple
years, FD & EMS merged.

I don't want to get into a pissing match with anyone on the list
except to say that I am comforted that the city that protects me
(Lewisville), the firefighters know how to give me CPR and treat
a serious laceration, etc., as well as pour water on my house or
apartment that's burning down.

While not specific to that scanner there are a couple of articles about modern trunked radio systems in the "Other References" section of http://info.uniden.com/twiki/bin/view/UnidenMan4/ScannerManuals. In particular "But I Just Want to Listen To The Police" explains why you cannot just put in a frequency nowadays.

Allen operates primarily on the Plano Motorola Type II system (documented at: http://www.radioreference.com/apps/db/?sid=63). Any triple trunker will follow that system today. However systems nationwide are being rebanded (to operate using a different channel scheme). Eventually the Plano system will move ot the new scheme...whether your scanner will work after rebanding depends on the specific model. Look it up in the wiki on the RadioReference site...all models are flagged as to whether they will or won't work after rebanding.

Just heard an on-air tutorial for a PD officer changing to the new channels used for events. They mentioned that you can change from "Channel F1 through 16".

Decimal talkgroup 58448 is "F1". I've confirmed F2, 3, and 4 as 58480, 58512, and 58544. Continue to add 32 for each channel, that puts 58928 as F16, which is what fire/EMS operations have been using at baseball games.

Although the Pro 95 and Pro 97 may not be upgradeable, they both should still work on Richardson's EDACS system, which has already been rebanded. Just reprogram the frequencies, 15Mhz lower. I believe you're out of luck for any Motorola trunked systems.

Ben

Those are still great scanners...just not for Motorola trunktracking post-rebanding.

I'd have to recommend either the BC346XT (analog) or BCD396XT (digital). Because I'd be fired if I didn't. :)

Seriously, the BC346XT is the only dynamic-memory TT3 out there, so I really can't compare it to anything else. The competition (RS and GRE) still offer only banked scanners for analog trunking...and that is now becoming quite old tech. If you opt for digital, both GRE and RS offer alternatives...and they work great...but even without my inherent bias I think I'd still find the operation and use of the BCD396XT superior.

Hey Tom and the group,

The reason Paul is so biased, in case you could not tell, is because he works for Uniden. In fact he is the product manager of the Uniden scanner product line. Since Paul is local, you might expect to find him on this list. But the truth is Paul is on many different lists, as well as RadioReference.com, constantly listening and interacting with members of the scanning community. To me, that is what makes Uniden great and sets them apart. Many of the features (bells and whistles) that are in their latest product offerings are because of the fact that Uniden is listening to the people who actualy use their products. Can't say that about most companies.

Correct again Ben IFD, IFD, DART Police, Trinity Railway Express, held a drill at the TRE yard. Terrorists took over a TRE train and exploded an unknown type of CBRNE device killing 8 passengers and wounding 16 others. Irving Citizens Fire Acadamy Alumni furnished victims and the Irving Police Acadamy Alumni furnished hostages for a SWAT rescue. Many lessons learned, a good barbeque lunch afterwards, and a good time was had by all.

30002. Re: Dallas Fire No Rescues

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-20 21:35:25 UTC
From: wgb424896
Topic: 29974 Message: 30002

DFR is looking for ways to not send an ambulance because they run out of boxes and because of historical no transport patients on ambulance calls. DFR members for the last several years now have to sign on as a paramedic for life prior to rookie school. Since DFR has so many paramedics I think they should follow Irving's lead and make every engine a paramedic engine....DFR has the paramedics they just need to add the ALS equipment to the engine. A paramedic engine can identify a dead person for a ME response and not a transport, handle historically high no transport calls (see criteria in item 2 below) AND GIVE ALS TREATMENT FASTER THAN A BOX COMING FROM A FURTHER DISTANCE WHICH IS WORTH MORE THAN THE GOLDEN HOUR, YOU GET THE PLATINUM 10 MINUTES.

Here are some things DFR is doing.

1. The ALS engine procedure is up and running as of April 7th. An EMS call in the first alarm area of Eng 5, 9, 12, 16, & 40 will have only the ALS engine respond. This adds 3 paramedic engines to DFR to the existing PE 9 & PE 12.

2. The Rapid Response Unit test started April 10th to serve on Fridays from noon to 0300 and Saturdays from noon to 0300. Any aggravated assault call, injured person call, animal bite, back pain, 3rd party call of a MVC, or a 3rd party call of a man down that is within 8 minutes response time of station 37 or 6 will have Medic 1 or Medic 2 respond instead of a box.

3. Most active EMS run report for DFR:

January of 2009 ☐ top six runners are 33, 06, 37, 25, 38, and 53.

February of 2009 ☐ top seven runners are 33, 06, 23, 25, 38, 46, and 26.

All local fire departments deliver quality service and we are blessed to have them. These are the real heroes and not the millionaire professional athletes and movie stars that are deified.

30003. Another New Wise County Frequency (for Me)

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-21 00:10:33 UTC
From: commscan
Topic: 30003 Message: 30003

I was just tracking down the user of 154.310/DSC 245 on the FCC database site and RR.com when the confirmation came through in the radio traffic. This is Bridgeport FD/Medic's dispatch channel. The FCC database shows Bridgeport VFD listed but RR.com doesn't have it there.

Anyone know if this is "new" for Bridgeport to be using this frequency? The license was filed in 2004 I believe but this one is a "first time heard" catch for me.

I'm wondering if Wise County is doing some updating of frequencies in the city/county agencies. I recently heard another frequency (154.3775/DCS 654) that was a new one for Wise County Fire channel it appears. Even though Cottondale VFD is listed with this frequency and they're in Wise County, this frequency is a simulcast of the well known Wise County Fire channel 154.445.

Bridgeport just toned out another call (residential structure fire) a few seconds ago. And Engine 1's siren is ear piercing over the air. Even the dispatch is having problems hearing. It sounds like Bridgeport's having a few problems (maybe still being set up???) them selves on the frequency.

For what it is worth, I reprogrammed my PRO-95 with the new Richardson frequencies. It seems to work OK, but I am not close to the transmitter for a good test. I am near Mockingbird and Abrams, using the antenna on the handheld.

Subject: RE: [dfwscan] Rebanding

Although the Pro 95 and Pro 97 may not be upgradeable, they both should still work on Richardson's EDACS system, which has already been rebanded. Just reprogram the frequencies, 15Mhz lower. I believe you're out of luck for any Motorola trunked systems.

Ben

>Ok guys, I have read the articles, checked out RR, and did my research, but I still want to hear it from the experts here on the list. Due to the rebanding, it appears that my pro-95 and pro-97 are pretty much obsolete? My primary listening areas are Richardson, Plano, and southeast Colin county. Next question. What do you guys recommended I pick up to continue my scanning?

Thanks for the help.

Might you not actually be even more comforted if those responding to your potentially life-and-death medical emergencies were people who chose medicine as their profession because the healing arts were just the most intellectually stimulating and emotionally fulfilling commitment they could make of their life, instead of just someone who saw it as nothing more than a temporary hoop to jump through in order to get hired as a fireman?

I sure would.

If you□re looking for something different to listen to on your scanner!

Terry

http://www.wired.com/politics/security/news/2009/04/fleetcom

CAMPINAS, Brazil □ On the night of March 8, cruising 22,000 miles above the Earth, U.S. Navy communications satellite FLTSAT-8 suddenly erupted with illicit activity. Jubilant voices and anthems crowded the channel on a junkyard's worth of homemade gear from across vast and silent stretches of the Amazon: Ronaldo, a Brazilian soccer idol, had just scored his first goal with the Corinthians.

It was a party that won't soon be forgotten. Ten days later, Brazilian Federal Police swooped in on 39 suspects in six states in the largest crackdown to date on a growing problem here: illegal hijacking of U.S. military satellite transponders.

"This had been happening for more than five years," says Celso Campos, of the Brazilian Federal Police. "Since the communication channel was open, not encrypted, lots of people used it to talk to each other."

The practice is so entrenched, and the knowledge and tools so widely available, few believe the campaign to stamp it out will be quick or easy.

Much of this country's geography is remote, and beyond the reach of cellphone coverage, making American satellites an ideal, if illegal, communications option. The problem goes back more than a decade, to the mid-1990s, when Brazilian radio technicians discovered they could jump on the UHF frequencies dedicated to satellites in the Navy's Fleet Satellite Communication system, or FLTSATCOM. They've been at it ever since.

Truck drivers love the birds because they provide better range and sound than ham radios. Rogue loggers in the Amazon use the satellites to transmit coded warnings when authorities threaten to close in. Drug dealers and organized criminal factions use them to coordinate operations.

Today, the satellites, which pirates called "Bolinha" or "little ball," are a national phenomenon.

"It's impossible not to find equipment like this when we catch an organized crime gang," says a police officer involved in last month's action.

The crackdown, called "Operation Satellite," was Brazil's first large-scale enforcement against the problem. Police followed coordinates provided by the U.S. Department of Defense and confirmed by Anatel, Brazil's FCC. Among those charged were university professors, electricians, truckers and

farmers, the police say. The suspects face up to four years and jail, but are more likely to be fined if convicted.

First lofted into orbit in the 1970s, the FLTSATCOM bird was at the time a major advance in military communications. Their 23 channels were used by every branch of the U.S. armed forces and the White House for encrypted data and voice, typically from portable ground units that could be quickly unpacked and put to use on the battlefield.

As the original FLTSAT constellation of four satellites fell out of service, the Navy launched a more advanced UFO satellite (for Ultra High Frequency Follow-On) to replace them. Today, there are two FLTSAT and eight UFO birds in geosynchronous orbit. Navy contractors are working on a next-generation system called Mobile User Objective System beginning in September 2009.

Until then, the military is still using aging FLTSAT and UFO satellites ☐ and so are a lot of Brazilians. While the technology on the transponders still dates from the 1970s, radio sets back on Earth have only improved and plummeted in cost ☐ opening a cheap, efficient and illegal backdoor.

To use the satellite, pirates typically take an ordinary ham radio transmitter, which operates in the 144- to 148-MHZ range, and add a frequency doubler cobbled from coils and a varactor diode. That lets the radio stretch into the lower end of FLTSATCOM's 292- to 317-MHz uplink range. All the gear can be bought near any truck stop for less than $500. Ads on specialized websites offer to perform the conversion for less than $100. Taught the ropes, even rough electricians can make Bolinha-ware.

"I saw it more than once in truck repair shops," says amateur radio operator Adinei Brochi (PY2ADN) "Nearly illiterate men rigged a radio in less than one minute, rolling wire on a coil."

Brochi, who assembled his first radio set from spare parts at 12, has been tracking the <http://www.py2adn.com/artigos/Satelite-Bolinha.pdf> Brazilian satellite hacking problem (.pdf) for years.

Brochi says the Pentagon's concerns are obvious.

"If a soldier is shot in an ambush, the first thing he will think of doing will be to send a help request over the radio," observes Brochi. "What if he's trying to call for help and two truckers are discussing soccer? In an emergency, that soldier won't be able to remember quickly how to change the radio programming to look for a frequency that's not saturated."

When real criminals use these frequencies, it's easy to tell they're hiding something, but it's nearly impossible to know what it is. In one intercepted conversation <http://www.youtube.com/watch?v=TUrYwMK2V5s> posted to YouTube, a man alerts a friend that he should watch out, because things are getting "crispy" and "strong winds" are on their way.

Sometimes loggers refer to the approach of authorities by saying, "Santa Claus is coming," says Brochi.

When the user's location is stable, the signal can be triangulated. That's how the Defense Department got the coordinates to feed Brazilian authorities in March's raids.

While Brazil may be the world capital of FLTSATCOM hijacking, there have been cases in other countries ☐ even in the United States. In February of last year, FCC investigators used a mobile direction-finding vehicle to trace rogue transmissions to a Brazilian immigrant in New Jersey. When the investigators inspected his radio gear, they found a transceiver programmed to a FLTSAT frequency, connected to an antenna in the back of his house. Joaquim Barbosa was hit with a $20,000 fine.

A technician with Anatel, speaking on condition of anonymity, says the chief problem with ending the satellite abuse in this country is that U.S. and Brazilian authorities simply waited too long to start. Thousands of users are believed to have the know-how to use the system. After a bust, the airwaves always go quiet for a while, but the hijackers always return.

One week after the "Operation Satellite," Brochi met with Wired.com at a gathering of amateur radio enthusiasts in a bucolic square in Campinas, about 60 miles north of Sao Paulo. Brochi switches on his UHF receiver and scans through the satellite frequencies.

It's relatively quiet now on the satellite underground, except for the static-like sound of encrypted military traffic. But eventually, a lone creaky voice cuts through. It's a man in Porto Velho, the capital of Rondônia, a day's drive north into the upper Amazon basin. He's making small talk with a friend in Portuguese. The satellite pirates are creeping back on the air.

Hmmm... must be just a transfer of a rescued patient from the ER to a trauma centre. As far as I know, CareFlite is prohibited by policy from participating in any aerial rescue activities.

From: commscan
Topic: 30013 Message: 30013

I think I typed my whole message in the subject line and probably need to say nothing else :-)

I am receiving Venus FD/EMS tonight on the same frequency (155.100) and PL tone (156.7) that White Settlement FD uses. I am 100% sure this is accurate. There was even a Morse code callsign WNQM851 (Venus, City of) that was broadcast after an EMS call too.

I know Venus ISD has used this frequency with a 103.5 PL for years. It's a low power/watt site (as is this current one from the transmission it appears), but they are using it now with their FD/EMS and the 156.7 PL.

I realize Johnson County has been revamping a few frequencies and making some changes countywide since they elected to drop the Passport LTR system. I'm wondering three things. (1) Is this one of those new changes in JC, (2) is this a change that Venus made without realizing WSFD uses this same frequency and PL tone, and/or (3) has White Settlement gone to the new TRS Tom posted the link to the 800 frequencies on a not long ago.

Anyway you look at it, Venus FD/EMS is using 155.100 with a PL of 156.7 now and this is exactly what White Settlement FD has been using for eons?

Anyone have any ideas on this???

Hello Group,

IMHO, you are 100% right Chance! It's great to have the Product Manager of the best scanner (again, IMHO) made so active in the groups and forums seeing what people say and want. I know he must put up with a lot of insults from the less tactful people I've seen posting on RR.com's forum, but he keeps on answering questions and keeping us updated regardless.

Paul, does Uniden know they have such a great employee? You don't need to answer that one :)

Secondary to Paul being a part of the hobby/communities we're all in, the Uniden scanners, especially since the Dynamic Memory models, blow away the GRE and Radio Shack competition I feel. Uniden doesn't just have bells and whistles you never use (maybe a few...they all do). They have very useful bells and whistles that make their scanners superior to the other products I named. And the way the Uniden scanners are set up make it so easy to organize your data in the scanner that it is the much better choice I believe.

I'm not trying to criticize GRE or even RS products, so I'm definitely not trying to start any arguments hear. This is strictly my opinion (and the opinions of many other scanner listeners I personally know).

And don't forget...Paul was also the reason the first digital scanner, the Radios Shack/GRE Pro-96, was made. He was the Pro-96 Product Manager back then. And the Pro-96 can be flashed for rebanding too. So you first generation, digital GRE/RS fans can still be thankful for Mr. Opitz commitment even if you don't use or own a Uniden scanner :)

I'd really love to try out a GRE PSR-500. I know it's a great scanner in many ways. But until it becomes a little more (organized in structure) than a huge 20 bank scanner, I'm not even considering it. Again, this is a personal preference/observation and in no way an insult to the GRE PSR-500 or similar RS/GRE models.

And there's one last thing before I shut up I'd like to say. I work for neither RS, GRE, nor Uniden; and this isn't a butt kissing reply message either. I've bragged on Bearcat/Uniden products since my first programmable Bearcat 100XLT 100 channel handheld scanner I bought in the 1980's. I'd used Regency and Radio Shack products prior to the Uniden scanner. So when I say, "Thanks Paul", it's a message from years of use and experience with Bearcat/Uniden scanners and the incredible evolution I've seen in Uniden products since Paul joined them...

Subject: [dfwscan] Re: Rebanding

Hey Tom and the group,

The reason Paul is so biased, in case you could not tell, is because he works for Uniden. In fact he is the product manager of the Uniden scanner product line. Since Paul is local, you might expect to find him on this list. But the truth is Paul is on many different lists, as well as RadioReference.com, constantly listening and interacting with members of the scanning community. To me, that is what makes Uniden great and sets them apart. Many of the features (bells and whistles) that are in their latest product offerings are because of the fact that Uniden is listening to the people who actualy use their products. Can't say that about most companies.

-Chance

I have the opposite complaint with Uniden. They don't make a simple, non-dynamic memory scanner without all those bells and whistles anymore. They don't make a single, simple, direct-entry mobile scanner that I can use in my vehicle. It's either one of these expensive, complicated, inconvenient, dynamic-memory monstrosities at one end, or the no-keyboard BC350c at the other end, with nothing in-between. WTF? To get anything from Uniden that I can even use for direct entry, I have to buy a handheld, which is completely impractical for mobile use.

I love Uniden, and they are putting out the best product out there. But their product line has zero diversity and needs a serious overhaul.

Hi Rob,

I can understand the frustration associated with learning the new Uniden Dynamic Memory scanner methods of programming (and especially the other brand methods), but I really think that once people learn the great resources and ease of use in programming the scanner, they will soon change their minds. And if anyone thinks the Uniden scanners are difficult to learn, Lord have mercy if you are playing with the RS/GRE scanners made in the last few years. I haven't owned one of the PSR-500/Pro-106 scanners but I've got friends with a few and I even have a few newer (last 2-3 years) RS/GRE scanners. Those are much more difficult to program in the field in my opinion.

Rob, if you have the frequencies (conventional) handy and you want to program them into a current or new Uniden scanner System, try this. It is very easy also once you do it a few times.

Let's say you want to create a System for area fire departments using conventional frequencies and be able to enter the frequencies (especially new ones found) quickly (no alpha tags, just the frequencies like the older scanners allowed). We'll say you want to enter 154.1. 154.37, 154.205, and 460.525 (just some random frequencies in this example). All you need to do is press the "Menu" button on the side of the radio, choose "Program System", and use the rotator knob on top or keypad and go back one turn to "New System". Press "E" (or Enter) and choose to make it a "Conventional" system. There are a lot of other options you have at this point such as naming the System, etc; but we won't get distracted by those options in this example. So, for the sake of making it quick and easy to create a System for putting in a conventional channel/frequency, just hit the "Hold" button after creating the "Conventional" System (even though you could enter each frequency from where you're at if you wanted).

What you just did was create a conventional system with no frequency information entered yet. The default name given to this System will be "System ##" (depending on how many other trunk and/or conventional systems you already have entered). You can change the name if you want to. BTW, in case you don't already know this, what we call a "System" nowadays would for most practical purposes have been called a "Bank" in the older scanner models.

What I've described thus far may sound difficult as a person is learning it, but it really isn't. And once you've done this, the "hard part" is over.

Next, (and keeping in mind you've just created a new, empty System to store your frequencies) you'd take your first frequency you want to enter (154.1 in this case) and type in 154.1, press the "E" key, and you're asked if you

want to save this in the "Quick Save" System. Press the decimal (".") to answer "No" and then use the scrolling knob or keypad to choose the System you want to save the entry into (i.e. the new System you created) and then press "E". After this, decide if you want to choose any other options on the screen (i.e. PL tones, Delay, Hold time, etc, etc), and if not, just press the "Hold" or key again and it's in there and you are parked on 154.1 listening to it. Just repeat this for any conventional frequency you want to enter. When you're done, you'll have all of your entries in the System you created.

The method I just described is not the only way or even the easiest way to enter the frequencies to your scanner while mobile/in the field. But once you see how it is done this way, you can enter any new frequency you want very quickly and without going through the menu steps in the manual that seem to take longer. Everyone has their own methods I'm sure, but I think this one sounds like it describes what you may be wanting which is an easy, fast way to enter a conventional frequency and nothing else into a System while driving or sitting around manually programming your scanner.

Sure, it's not as simple as hitting "Manual", "5" (a random channel I'm picking to enter a frequency into on an older scanner), "Manual", "154.1", and then "E" to enter a frequency, but it really isn't much harder. And it becomes almost just as quick once you get use to it. I can promise you that once a person gets use to using the new Dynamic Memory scanners they will never look back. It is that much greater.

But I get your point too on having an easy, fast, older scanner handy for mobile use. There's nothing today that makes programming as easy as it use to be, but again, I really feel like the extra few seconds (after getting the process down) makes it where people never look back at the way it was before.

I've always wanted to be able to program my scanner in the field and not have to rely on software to do it. I definitely use the software a lot, but I have to be able to make entries and changes when I'm not hooked up to a PC too. It sort of becomes useless in many ways if you cannot do this. And with all new scanners I know of today (with the exception of the PC implanted scanners), you can program them in the field. It's just takes a little getting use to and it really comes along quick once you do it a few times. And this is why I'm a Uniden fan myself. They've incorporated the most useful features into a scanner that is the easiest (in new radios) to be able to program and keep organized while on the go or at home with time to spare.

With Uniden's scanners, if you can program it with their software, you can program it in the field while on the go.

And one last thing that you might find helpful if you do not already know it is this. It doesn't matter if you're on a trunk system or a conventional system with the Dynamic Memory scanners. If you press "Hold", enter a frequency, and "Hold" again, you are monitoring that frequency. You haven't entered it into the scanners memory but you are able to instantly monitor

it. And if you want to enter it into a conventional System in the scanner, just follow the steps mentioned above.

It can be intimidating as you learn it at first, but man, what an eye opening pleasure it is once you really learn how to use it the way you want too. Like I said, I don't think there is any turning back once a person sees and understands how it works (and to their benefit).

I hope this helps some and doesn't confuse you more :)...

I have the opposite complaint with Uniden. They don't make a simple, non-dynamic memory scanner without all those bells and whistles anymore. They don't make a single, simple, direct-entry mobile scanner that I can use in my vehicle. It's either one of these expensive, complicated, inconvenient, dynamic-memory monstrosities at one end, or the no-keyboard BC350c at the other end, with nothing in-between. WTF? To get anything from Uniden that I can even use for direct entry, I have to buy a handheld, which is completely impractical for mobile use.

I love Uniden, and they are putting out the best product out there. But their product line has zero diversity and needs a serious overhaul.

DOH! Thanks! I didn't even realise that the BCT-8 was available anymore. The Uniden online catalogue is so disjointed and difficult to navigate that it's escaped me up to now. The BCT-8 is listed as a "base" scanner, but not as a mobile scanner. Since I'm not in the market for a base scanner, I never clicked there. It is listed under "public safety" scanners too, but only if you are lucky enough to figure out that there is a second page of scanners there, because it's not listed on the first page. Why Uniden couldn't fit more than ten, one-inch product thumbnails on a full page is beyond me.

Go to the online website. Find the scanners page, and click on the "base" link. You get such "base scanners" as the BC346XT. Go figure. Yet, if you click on the "mobile" link (which is a thumbnail of the BC898T BASE scanner), you get, wait for it... "Base Scanners" again. Someone screwed up big time. It's a wonder anyone can ever find anything there.

And while I'm complaining about the website, that race car sound effect has got to go!

The BCT-8 does indeed fit the general requirement. It has one of the best feature layouts of any scanner ever. Amazing that it doesn't have PL though, considering how much earlier mobile Uniden scanners already had it, at least as a plug-in option.

Does anyone know the differences between the BC92 and BC95 handhelds? Only difference I can tell is PC programmability and DND Close Call. Is there anything else?

The BC95XLT is also dark blue.

Thanks for the notes on the web site. I have a (very) little ability to affect it and will do what I can to get things to categorize correctly. I also hate the sound effects and have complained about it from the first day. We are discussing now some needed improvements and upgrades to the site...but it will be quite a while before anything major can be done to it.

I don't currently have it loaded, but I have been able to receive 155.505, fairly consistently, as a control channel as well during my commute and at work (Coppell area). Usually start hearing it on 114 while driving west towards Belt Line. It got stronger as you go farther towards the airport (that's more or less up hill). Seemed to get the strongest signal around Freeport & 114. It gets a little weaker as I go back to the north to my office around Freeport & Bethel Rd in Coppell, but still a good signal there. I loaded it as a P25 system for about a week, listened for any activity while at work, never got any voice, at least not yet.

Ok, so we've tracked it down to the DFW airport area possibly. Melissa? Bizarre that if this IS a Moto system (as it sounds like) none of us can get a sys ID. And it is definitely NOT the buzzsaw typical of P25. Has anyone confirmed any recent activity from CLE on 155.505 or 159.090. Both frequencies have been completely dead for me over almost the last year. Both used to be extremely active, almost on a daily basis with ground and air surveillance. Has anyone confirmed CLE/Rangers/etc. here in DFW on any of the new SPLINTER frequencies??

Could it possibly be Moto Turbo? I have no idea what these systems sound like, but would DPS/CLE be testing this?

WAG?

30033. Re: Control channel??

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-25 18:37:19 UTC
From: hiegtx
Topic: 30009 Message: 30033

Blaine,

If I've found the right scribbled notes, I was getting a sysid of 007. I had a 98% decode at my office, sitting in my truck, outside, using just a whip antenna (on a BCD396T). Office is across from the old Minyard's distribution center & Hard Eight BBQ, if that narrows it for you. Did not have a laptop to run any sort of trunking sys analyzer at that time, and no way I'd leave one, running, unobserved out in the truck now that I do have a laptop. It does read (on the 396) as P25.

I'll see what kind of readings I get on the PSR-500 this next week.

There have been some notes on 155.505, on Radio Reference, still being used as CLE, conventionally in other areas, towards Greenville and to our northeast (Paris, Bonham). I have all the listed state wide DPS/CLE/Rangers/etc frequencies that I've run across (old & new) programmed in both the 396 (now the XT version instead of the original) and PSR-500. Nothing on any of them except this control channel & occasional electronics interference on entries which I've set to tone/code or NAC search. No voice traffic at all. Either they are using Nextel, or on some new frequencies we've overlooked somehow.

Steve

From: commscan
Topic: 30034 Message: 30035

Hi Blaine & Group,

I just heard a Lake Granbury victim being brought into Harris or JPS around 11:30 PM or so. I imagine the hotter it starts getting the more we'll be hearing these types of calls. And we're probably all familiar with the July 4th, heat, alcohol, and whatever induced drownings. It never fails on the 4th and Memorial Day...

23:00

The FD cavalry is going to a possible drowning at Lewisville Lake in front of Sneaky Pete's. The drunkards and spring / summer drowning season has begun for 2009. Wonder how many we'll have this year? Tis' a shame....

Hello All,

I posted something to this list years ago about hearing a control channel on 155.505 from the west Fort Worth area. I was hearing it for a while back then. I have to admit, I've sort of forgotten about it until I saw this posting. I haven't heard the control channel sounding data on this frequency for many years now.

Subject: [dfwscan] Re: Control channel??

I don't currently have it loaded, but I have been able to receive 155.505, fairly consistently, as a control channel as well during my commute and at work (Coppell area). Usually start hearing it on 114 while driving west towards Belt Line. It got stronger as you go farther towards the airport (that's more or less up hill). Seemed to get the strongest signal around Freeport & 114. It gets a little weaker as I go back to the north to my office around Freeport & Bethel Rd in Coppell, but still a good signal there. I loaded it as a P25 system for about a week, listened for any activity while at work, never got any voice, at least not yet.

Oh definitely. You can bank on at least a couple
each season on Lewisville Lake, either boating
accident, or drunk overboard. This lake has claimed
a sh**load of people. Luckily this one had
a good ending, well semi-good. At least the poor
sap didn't have to be drug up and carted off in a
body bag. They recovered him, had hypothermia,
looks like he fell off the party boat from Pier 121
(probably drunk). Right in front of Sneaky Petes.
So the party animals for a Saturday night had some
excitement. Oooooh flashing red lights, dude....LOL

30045. P25 Trunking Control Channel 155.3025

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-26 21:02:00 UTC
From: js_scan888
Topic: 30045 Message: 30045

There's a P25 trunking control channel active on 155.3025. On my scanner it reads 155.3000, but I think its really 155.3025. I get this on two different brands of scanners, so it's not an image freq. It sounds like its coming from far West Dallas County. I'm on the other side of the County, in the NE corner. If anyone has a P25 scanner that can received it, give it a try. It sounds like it is active, and I've heard it most of the day so I think it is local and not skip from a different area.

WACN = 1
SYSID = 7

Now I thought in Texas it was required to use the FCC callsign to compute the WACN and SYSID. This worked fine for the VHF P25 system in Parker County, or the test Frisco system that is now inactive. I was going to use the RAD50 formula and take the WACN and SYSID and reverse the process to obtain the FCC callsign but the WACN is only 1. Maybe this is a new system and they don't have it setup yet. I currently get: space space space B V W, when converting back.

Perhaps it is related to the P25 control channel people were hearing on 155.505. Maybe it moved to a different freq.

That's the same WACN & SYSID I was getting on 155.505, near the Las Colinas/DFW Airport area. If it's western Dallas County, I may be able to hear it. I'm s/w of downtown. I'll throw it in a little later, both on a whip, & try one of the scanners on an external antenna.

By the way, this P25 system is running in Implicit Mode. There are no Identifier Update messages. The channel and frequency info is programmed into the service radios. A person would need to create a custom table for their P25 scanner in order to know which freq to switch to for the voice traffic. Good luck with that.

I've been playing with my scanner and was wondering what frequency range Bluetooth handsets use? Also what frequency range is for fast food drive through operators?

Any other good ranges besides ham, police, air, cb, weather, marine, gmrs/fms ?? I already have those programmed.

Thanks guys!

Adrian

I'm pretty sure Bluetooth is encrypted, but I don't use
it on my phone so I don't know. I think it's sorta weird
looking even though it's the "in" thing...makes you look
like a Borg...:)

Fast food headsets various tremendously. Many are on
the itinerant frequencies, many in UHF band. For instance,
Taco Bell up on Main St close to me uses 457.5125. Obviously
range coverage is very low.

So I'd search between 150-160mhz, and 451-470mhz. Best bet
is using Close Call if you have it on your scanner.

> Any other good ranges besides ham, police, air, cb, weather, marine, gmrs/fms ??

Maybe milair if you're interested....225-400mhz am mode.

Blaine

Hi Gary & Group,

The MilAir fever must be hitting lately. I too haven't been listening for a while but I've been programming an AOR AR8000 up just over the last few days for MilAir. I've become spoiled by the easy PC file building method, where things can be organized later after entering the data. Now I'm back to having to use my head and organize things before I manually program them :) My head is hurting :)

Here are some quick, always keep programmed frequencies I've already entered into the AR8000 so far and I still have about 900+ channels to go.

291.775 NASFW Base Ops
269.325 NAS FW Tower (UHF Primary)
254.325 NAS FW Ground (UHF Primary)

389.100 181st AS ROPER Ops
233.900 VMGR-234 RANGER Ops (NASFW USMC KC-130 a/c)
289.800 VMGR-234 RANGER Ops
355.400 VMGR-234 RANGER Ops
384.500 VR-59 LONESTAR Ops (NASFW USN C-9/B-40 a/c)
284.100 Lockheed U-01 (OVERRIDE 01)
292.500 Lockheed U-02 (OVERRIDE 02)
349.725 Lockheed U-10 (UHF Backup)
123.575 Lockheed V-01 (VHF Primary)
123.400 Lockheed V-02 (VHF Secondary)
123.150 Lockheed V-10 (VHF Backup)

This isn't really even scratching the surface on what's out there. I ALWAYS recommend an outside antenna for MilAir monitoring. While it's not a requirement, it'll make a world of difference in what you hear.

A lot of people may not realize that you can hear the B-52 bombers from Barksdale, the B-1B bombers from Dyess, tons of stuff from other states, aerial refueling routes being worked, Sheppard AFB (tons of T-38 squadrons with tons of frequencies), Regional Approach/Departure and ARTCC (Air

Traffic Control) frequencies, etc, etc, etc. Don't be fooled by thinking "Tinker AFB or Sheppard AFB are too far away" and believe you cannot hear traffic from them. Sure, you aren't going to hear their Tower or Ground Control from DFW. But their aircraft are up flying almost every day, most with their air-to-air and squadron/ops frequencies being used and many others frequencies too.

There would be no way to post everything into an e-mail to the group on what can and has been heard. There's just way, way too much.

Most of the frequencies above are one's I'd personally keep in and scanning. You may hear little at times on some. It's not like a PD or FD channel where they use the frequencies every day. But when they are used, you'll be glad you have them programmed in.

I've been a MilAir buff for 20+ years but have been out of the loop on actually listening too much over the last 3 years or so. And a lot has changed. Just like the TRS' that are re-banding and the counties (i.e. Johnson County) that are restructuring their frequencies, the military does the same every once in a while. That's why I haven't labeled the 301st FW channels with the exception of a few I've definitely confirmed the channel number for (i.e. V-07) lately. It's intimidating trying to start back up and decide how to manually program in things the way you want too. It takes planning and time. And way too many internet sources have old, outdated information to really rely on them very much. But there are definitely some great, current ones out there too.

It takes a real interest in hearing the MilAir traffic and time to learn it if you want to understand it. But then again, so does learning to use a TrunkTracker scanner too if you are use to the conventional days of programming scanners. But it is fun (in my opinion) and worth the effort it takes. In short, it's just like anything else in the radio hobby. It takes time to figure out some stuff, but if you enjoy it, then you're bound to find out that you need or want with a little work.

The frequencies I posted should be good for hearing ACM (Air Combat Maneuvers or air-to-air combat practice) and a lot of other cool (and boring too) stuff for the DFW area. And as much as I "enjoy" putting together radio programming for MilAir, I'm dreading the amount of time it's going to take before I finish up on the AR8000 wide range receiver too (unless I'm able to get the PC cable, CIV type box, and software to speed up the process).

I want to mention one last thing for those interested in scanning for MilAir traffic. These three frequency ranges blow are your most important search ranges for MilAir traffic. And just like the frequencies listed above (with the 53.675 FM exception...yep in the Ham band), these ranges and frequencies are all in the AM mode with 25 kHz spacing steps when you program them in.

SEARCH RANGES:
1. VHF-Hi 1: 137.000 MHz to 144.000 MHZ AM (25 kHz steps)
2. VHF-Hi 2: 148.000 MHz to 150.750 MHZ AM (25 kHz steps)

3. UHF MilAir: 225.025 MHz to 399.975 MHZ AM (25 kHz steps)

While I have a hard time keeping up with a lot of e-mail today, I'll try to keep an eye on this thread for replies. And if anyone else knows the answers and feels like answering any possible questions that may be asked, please do!!! I don't purposely (in most cases) ignore e-mails; I just have a terrible time keeping caught up :)

ORIGINAL POST:

Hi Gary & Group,

The MilAir fever must be hitting lately. I too haven't been listening for a while but I've been programming an AOR AR8000 up just over the last few days for MilAir. I've become spoiled by the easy PC file building method, where things can be organized later after entering the data. Now I'm back to having to use my head and organize things before I manually program them :) My head is hurting :)

Here are some quick, always keep programmed frequencies I've already entered into the AR8000 so far and I still have about 900+ channels to go.

291.775 NASFW Base Ops
269.325 NAS FW Tower (UHF Primary)
254.325 NAS FW Ground (UHF Primary)
120.950 NASFW Tower (VHF)
164.400 NASFW Ground (VHF)
342.550 NASFW Metro (Weather)
371.875 NASFW GCA (UHF Primary)
128.775 NASFW GCA (used a lot/poss. VHF Primary)
132.225 NASFW GCA (used a lot/poss. VHF Primary)
257.950 Regional A/D (NASFW Primary)
363.150 Regional A/D (used frequently be NASFW)
306.950 Regional A/D (used frequently be NASFW)
379.900 Regional A/D (used frequently be NASFW)
341.000 ARTCC (Dublin/Brownwood MOA areas)
354.050 ARTCC (Dublin/Brownwood MOA areas)
317.700 Brownwood MOA (HORNET Range)
346.300 Brownwood MOA (TOMCAT Range)
282.200 Brownwood MOA (LOON Range)
356.600 FALCON Range (Primary)
344.500 FALCON Range (Secondary)
276.800 Hood Range
288.300 Rivers MOA
283.725 Snyder Bomb Plot

30063. Re: [dfwscan] Frequency ranges for fast food mics & bluetooth headsets?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-28 11:08:51 UTC
From: Robert Thompson
Topic: 30055 Message: 30063

Bluetooth is not what I'd call scanner-accessible... It's got an average spectrum width of 100 MHz @ 2.4 GHz, an (intentionally) EXTREMELY low average power density, and uses techniques that the military used to call "low probability of intercept". These days, it's called "low probability of interference" or maybe "avoid jamming the wifi" ;)

In your average scanner (assuming you're very close to the source), it will sound like digital noise no matter where you tune in the 2.4 GHz spectrum.

A lot of detail is available from Wikipedia:
http://en.wikipedia.org/wiki/Bluetooth

From http://www.mobileinfo.com/Bluetooth/FAQ.htm#t2 (and elsewhere, via Google):

Bluetooth is a Frequency-Hopping Spread Spectrum technology. Each "piconet" selects a pseudorandom hop pattern covering the 79 1 MHz channels starting at 2.402 GHz The hop rate is 1600 hops/sec. The base data transfer rate is 721 kilobits per second. The keying is Gaussian Frequency Shift Keying (http://en.wikipedia.org/wiki/GFSK). The common power levels are 1, 2.5, and 100 mW (into fairly ineficcient antennas).

For those of you who find pictures more effective, here's what it looks like in a waterfall:
http://www.metageek.net/category/wi-spy-recording-tags/bluetooth . Note that the waterfalls shown are around 100 MHz wide. The top half is time, the bottom half is a power-averaging view.

A nice picture showing the channel allocation can be found at
http://blog.tayx.co.uk/2008/03/15/bluetooth-frequency-spectrum/
A nice picture showing a near-instantaneous snapshot of the 2.4 GHz ISM band during a bluetooth handshake is here:
http://www.mwrf.com/Files/30/5486/Figure_01.gif

From: Roy Hodgens
Topic: 30064 Message: 30064

I don't recall if I saw the message on this Group or another, but a retired engineer that formerly worked for E-Systems in Garland was working on a converter, somewhat like those being utilized for digital broadcast television, for use with non-digital broadcast receiving scanners.

I was just wondering if anybody has heard if he has completed his task and is it available yet or did the scanner manufacturers buy him off so they can sell very expensive scanners able to receive digital signals.

If I remember correctly he used his Amateur Radio Call Sign as a User Name.

I did find one freq for this system. It's 155.6025 NAC 007 (my scanner shows it as 155.6000). Maybe someone can listen on this freq for a while and determine who it is. I sent a group message about this yesterday but it never showed up, so I'm resending the info.

Something like that may already be mooted. If you're interested in decoding various digital signals, I would look into Software Defined Radio. If you're already a bit of a Linux hacker and/or programmer there's a ton of fun stuff you can do with those toys. Plus, many of them have flat spectrums without the "cell phone holes" that are required on US made scanners.

Keep in mind, if you write your own software it might be cost effective. If you buy software for it, it's going to cost more than one of those "expensive scanners". (You could always build your own.) I've been looking at several of the products in this space, and I think I might pick one up soon.

BTW, I love my expensive Uniden BCD396T. I was well worth the money.

Mark

123.150 Lockheed V-10 (VHF Backup)

This isn't really even scratching the surface on what's out there. I ALWAYS recommend an outside antenna for MilAir monitoring. While it's not a requirement, it'll make a world of difference in what you hear.

A lot of people may not realize that you can hear the B-52 bombers from Barksdale, the B-1B bombers from Dyess, tons of stuff from other states, aerial refueling routes being worked, Sheppard AFB (tons of T-38 squadrons with tons of frequencies), Regional Approach/Departure and ARTCC (Air Traffic Control) frequencies, etc, etc, etc. Don't be fooled by thinking "Tinker AFB or Sheppard AFB are too far away" and believe you cannot hear traffic from them. Sure, you aren't going to hear their Tower or Ground Control from DFW. But their aircraft are up flying almost every day, most with their air-to-air and squadron/ops frequencies being used and many others frequencies too.

There would be no way to post everything into an e-mail to the group on what can and has been heard. There's just way, way too much.

Most of the frequencies above are one's I'd personally keep in and scanning. You may hear little at times on some. It's not like a PD or FD channel where they use the frequencies every day. But when they are used, you'll be glad you have them programmed in.

I've been a MilAir buff for 20+ years but have been out of the loop on actually listening too much over the last 3 years or so. And a lot has changed. Just like the TRS' that are re-banding and the counties (i.e. Johnson County) that are restructuring their frequencies, the military does the same every once in a while. That's why I haven't labeled the 301st FW channels with the exception of a few I've definitely confirmed the channel number for (i.e. V-07) lately. It's intimidating trying to start back up and decide how to manually program in things the way you want too. It takes planning and time. And way too many internet sources have old, outdated information to really rely on them very much. But there are definitely some great, current ones out there too.

It takes a real interest in hearing the MilAir traffic and time to learn it if you want to understand it. But then again, so does learning to use a TrunkTracker scanner too if you are use to the conventional days of programming scanners. But it is fun (in my opinion) and worth the effort it takes. In short, it's just like anything else in the radio hobby. It takes time to figure out some stuff, but if you enjoy it, then you're bound to find out that you need or want with a little work.

The frequencies I posted should be good for hearing ACM (Air Combat Maneuvers or air-to-air combat practice) and a lot of other cool (and boring too) stuff for the DFW area. And as much as I "enjoy" putting together radio programming for MilAir, I'm dreading the amount of time it's going to take before I finish up on the AR8000 wide range receiver too (unless I'm able to get the PC cable, CIV type box, and software to speed up the process).

I want to mention one last thing for those interested in scanning for MilAir traffic. These three frequency ranges blow are your most important search ranges for MilAir traffic. And just like the frequencies listed above (with the 53.675 FM exception...yep in the Ham band), these ranges and frequencies are all in the AM mode with 25 kHz spacing steps when you program them in.

SEARCH RANGES:
1. VHF-Hi 1: 137.000 MHz to 144.000 MHZ AM (25 kHz steps)
2. VHF-Hi 2: 148.000 MHz to 150.750 MHZ AM (25 kHz steps)
3. UHF MilAir: 225.025 MHz to 399.975 MHZ AM (25 kHz steps)

While I have a hard time keeping up with a lot of e-mail today, I'll try to keep an eye on this thread for replies. And if anyone else knows the answers and feels like answering any possible questions that may be asked, please do!!! I don't purposely (in most cases) ignore e-mails; I just have a terrible time keeping caught up :)

Subject: [dfwscan] Milair

Blaine,

Since you mentioned the milair stuff. I know that this has probably been asked before, heck I know it has.
But I am going to ask anyway. What are some good freqs to start off with? I have scanned the milair band and found a few things here and there, but just some good basic freqs to get started with.

Gary

30069. Re: P25 Trunking Control Channel 155.3025

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-04-28 22:07:10 UTC
From: js_scan888
Topic: 30045 Message: 30069

I think this is complete now after finding another freq and doing the math to get the base and spacing freqs.

155.3025 Mhz WACN: 1 SYSID: 7 Channel 0x030 = 48 decimal (control)
155.4525 Mhz NAC: 007 Channel: 0x048 = 72 decimal
155.6025 Mhz NAC: 007 Channel: 0x060 = 96 decimal

Base Freq: 155.0025 Mhz
Spacing: 6.25 Khz

My scanner rounds to 155.3000, 155.4500, 155.6000.

DPS P25 trunked conventional? WTF?

How would we enter this in to track it, since I have yet to enter into my scanner any CONVENTIONAL trunked VHF systems...

Everything for me has been 800 stuff....

Since it is an implicit mode P25 system, you'll just need to enter the band plan (like you would for a Motorola VHF). Otherwise, programmed the same as an 800 MHz P25 system would be programmed.

Things are not always what they seem. About fifteen years ago, I planted some winter grass seed in my yard. And since the neighbourhood brats tended to not care anything about whose lawn they would trample, I put up yellow tape around my freshly plowed and seeded yard that said, "Police Line - Do Not Cross". I awoke the next morning to find about a dozen people and cars in front of my house, all just staring and inventing stories about what must have happened there! One woman, when she found out that I wasn't dead, was so pissed off that she got into my face screaming that her son had nightmares because of seeing the yellow "crime scene" tape at my house. I told her, "No, it wasn't the tape that gave him nightmares. It was you driving up with him and staring at it, saying 'oh my God! Look at that! There must have been a horrible murder there!'"

Stupid people.

Rob

Topic: 30045 Message: 30078

Yep - 155.4525 was heard around DFW airport yesterday afternoon with a NAC of 007 on my PSR500. Sounded like techs working on the system.

Please ignore the attached SPAM - I have no control over it.

Thanks Paul. Well, if it is indeed DPS then they are DEFINITELY
going to have to tweak this baby up with more power for metro
wide coverage, if that is their intention. The control channels
barely break the squelch up here in Lewisville with an outside
discone.

I did a search of the FCC database today... I noticed TAIT communications has a license for Trunking in the freq region we are discussing... I wonder if this is a demo system?

Please ignore the attached SPAM - I have no control over it.

Thanks Paul. Well, if it is indeed DPS then they are DEFINITELY
going to have to tweak this baby up with more power for metro
wide coverage, if that is their intention. The control channels
barely break the squelch up here in Lewisville with an outside
discone.

In the NE corner of Dallas County, here are my signal estimates:
155.3025 good (after finding the exact indoor antenna location)
155.6025 poor to good
155.4525 very poor almost nothing

It seems like the system is being put into a testing phase. With the 155.6025 voice channel being very active at night. It transmits for about 20 seconds then turns off, and then repeats again. Tonight is the same as last night, where it transmits over and over. Can anyone with a P25 scanner confirm that this is a test voice announcement being played ?

North Arlington, getting lots of hits on 155.4525 with my 996T tonight. Sounds like a buzz saw with an occasional P25 decode of voice, but not long enough to figure out what the woman is saying. I must be right on the fringe of reception!

One halloween I put crime scene tape around my porch and front door and drew a chalk outline on the porch. Strangely, we got very few trick-or-treaters that year.

> Things are not always what they seem. About fifteen years ago, I planted some winter grass seed in my yard. And since the neighbourhood brats tended to not care anything about whose lawn they would trample, I put up yellow tape around my freshly plowed and seeded yard that said, "Police Line - Do Not Cross". I awoke the next morning to find about a dozen people and cars in front of my house, all just staring and inventing stories about what must have happened there! One woman, when she found out that I wasn't dead, was so pissed off that she got into my face screaming that her son had nightmares because of seeing the yellow "crime scene" tape at my house. I told her, "No, it wasn't the tape that gave him nightmares. It was you driving up with him and staring at it, saying 'oh my God! Look at that! There must have been a horrible murder there!'"

If it happens again double check the NAC. The 007 NAC seems to be the trunking system. There is a strong DPS conventional system that uses 128 NAC which I believe is the DPS Garland system.

Hi Brian and group:

Just a couple of corrections & questions from your list:

356.6 Falcon Range primary has been replaced by 363.7 as
the primary, with 342.3 as the Backup. The former Backup of
344.5 is still being used however. I confirmed this about a
month or so ago, when air assets were using this frequency
for a nighttime sortie and laser targeting. I think it was the
B-52's out of Barksdale.

You have 255.4 as military Guard frequency. I have always
had this as 243.0, however, I have never heard any emergencies
on this frequency, military related. The only brief transmissions
I have ever heard have been radio checks, and they have been
few and far between.

You have 341.0 as an FWARTCC freq at Dublin. Is this a discrete?

255.4 is Military Flight Service Station and Guard is indeed 243.0. The
others you posted are correct as well for the Falcon Range Blaine. I don't
have 341.0 programmed but I just put it in to see if I get any hits there.

What I think is funny is how everyone freaked, and
didn't realize it was an Air Force One backup. I mean
"helooooooooo" ....big blue and white 747 with United
States Of America on the side....DUHHHHHHH......
and honestly, do they really believe that if it WAS a
hijacked terrorist plane, that an escorting F-16 would
allow it to get that close to buildings?....Come on!....

All they should have done was issued a press advisory
to radio, tv, and newspapers that it was being done, and
at what time. The people that didn't like it..., tough s**t!!

And these photo ops are nothing new. There are two
distinct pictures of the SAM/AF 1 craft over Mt. Vernon
and Mt. Rushmore....

323.3

Several DOOM and SKULL flights on this frequency throughout the early afternoon contacting Fort Worth Center. Don't have this one listed. I'm thinking it's "possibly" associated with the Ardmore site or maybe the Cumby RCAG sites, as one of the flights switched to 317.75 after this one.

Thanks Jeff. I wouldn't rely very much on the ATA-100
data unless you have an genuine FAA account, and access
to data within the last month or so. The same goes for DOD
access to updated (now classified) IFR supplement material.
Stuff that has been posted online for FREE download has been
generally inaccurate with what is currently being used in many
areas. I have found many new frequencies just from searching
225-400 mhz, and listening to hand offs from aircraft, such as
"Foxy 11 push 323.3". The same hold true for many of the VHF
center frequencies as well, however, since these are much more
heavily used, don't change as much.

Topic: 30098 Message: 30098

Earlier this morning about 11 AM CDT:

Caught two aircraft a/a on 233.6. Never
gave any ID's. Also, heard 141.075 a/a.
Also no ID's.

Also caught encrypted green comms on
367.725. Anyone have this as a possible
JSTARS or AWACS freq?

Thanks.

Blaine Brooks

Okay, thanks for trying. I know I had to move my little discone antenna around the room in order to receive a good signal. Finally found a small spot about 7.5 feet off the floor.

Hi Blaine & List,

Man, I even proofread my e-mail too :) I must be getting sloppy. Thanks for the corrections Blaine. I definitely messed up if I put 255.4 (Flight Service Stations/FSS) in as UHF Guard. I was thinking 243.0. I've heard plenty of transmissions over the years on 243.0, but never any emergency (which is of course its intended use) traffic. Coming up on this frequency is part of a checklist I think the JSTARS and AWACS aircraft go through before an exercise. They'll do a quick radio test and that's it. I do hear Navy Fort Worth JRB and Ft. Worth Center every morning doing their morning test as the airfield opens on 243.0 too. I'll also get an occasional EPIRB (Emergency Position Indication Radio Beacon = EPIRB I believe)going off due to some malfunction or accidental set off.

Thanks for the newer FALCON Range frequencies too. I'd seen you post not to long ago Blaine but forgot to check it out for myself and update my own records. I've reprogrammed the newer frequencies in now.

On my last typo, the 341.0 frequency, I was trying to type 314.0. This is an ARTCC and it's used around the Brownwood MOA a lot. The ground transmitter is located in Dublin, TX.

I'm glad you and Brandon caught the typos in frequencies. I completely missed them, and other than the 243.0 frequency, they're definitely important changes for catching some good MilAir traffic. 243.0 is a take it or leave it frequency to me. I just added it because it's nationwide. If I had all the memory or channels I needed to program it in, I'd take it (or add it). But if I had to limit the amount of data I could enter into a scanner, I'd leave it (out) since it really isn't used for its intended purpose of "Emergency" from my listening experience.

See everyone later...

Brian

Hi Brian and group:

Just a couple of corrections & questions from your list:

356.6 Falcon Range primary has been replaced by 363.7 as
the primary, with 342.3 as the Backup. The former Backup of
344.5 is still being used however. I confirmed this about a
month or so ago, when air assets were using this frequency
for a nighttime sortie and laser targeting. I think it was the
B-52's out of Barksdale.

You have 255.4 as military Guard frequency. I have always
had this as 243.0, however, I have never heard any emergencies
on this frequency, military related. The only brief transmissions
I have ever heard have been radio checks, and they have been
few and far between.

You have 341.0 as an FWARTCC freq at Dublin. Is this a discrete?

Subject: RE: [dfwscan] Re: Milair

255.4 is Military Flight Service Station and Guard is indeed 243.0. The others you posted are correct as well for the Falcon Range Blaine. I don't have 341.0 programmed but I just put it in to see if I get any hits there.

This is one of the frequencies you will hear the STRACOM EAM (Emergency Action Messages) on. The USN SCW-1 E-6B aircraft out of Tinker AFB can be heard on it if they're within monitoring range. They'll simulcast the EAM over 11.175 (and other HF frequencies) as well. I've never heard any Barksdale B-52 (DOOM/SKULL) traffic on it. Interesting...

323.3

Several DOOM and SKULL flights on this frequency throughout the early afternoon contacting Fort Worth Center. Don't have this one listed. I'm thinking it's "possibly" associated with the Ardmore site or maybe the Cumby RCAG sites, as one of the flights switched to 317.75 after this one.

Yeah, another milcom monitor from the northeast said
this was an old navy freq too. But this was definitely
a Ft. Worth Center frequency as the aircraft said
"Ft. Worth center, DOOM XX, flight level XX..."
I'm not sure where the RCAG is for it, but I was thinking
Cumby out to the east. Maybe an auxilliary/discrete
for that site.

Let's see if I can mess up one more frequency and confuse everyone :)

I was referring to 323.8 when talking about the SCW-1 EAM traffic in the last e-mail. I missed that Blaine mentioned 323.3. I've never determined where this ARTCC transmitter (323.3) is either. I know it's used in East Texas a lot but that's about it.

Sorry for any confusion...

Hi Tim & List,

This is their primary ops fre3quency nowadays. These are the Texas Air National Guard (I think I called them Texas Army National Guard a few days ago) C-130 aircraft. I don't see so well nowadays, but if they're still painted the way they were years back, they have a camoflauge green paint scheme on the. 226.9 is a good frequency to hear them on because they do a lot of practice approach runs, as do their KC-130 USMC aerial refueling friends (VMGR-235/RANGER ##) too.

I'd plug in the Navy GCA/PAR (Ground Control Approach/Precision Approach Radar) frequencies used at the base if you are close enough to hear them. They (the GCA/PAR stuff) may get boring to listen to after a while, but they use these frequencies all of the time. In fact, many times in the past I've missed flights coming into the base because I had all of the GCA/PAR frequencies locked out. They just skip using the Tower frequencies sometimes.

I have been thinking about possibly becoming a MARS operator and would like some additional information about what is required.

I currently do not hold any license, but am currently working on my technician class license. Does a MARS operator require a general class license? What equipment is recommended?

I'm just starting this process, so I'm not even sure what else I should be asking. Any feedback/suggestions about how I should proceed would be greatly appreciated.

I been listening to 462.1750 PL 123.0 today and it definitely sounds like they are some type of ambulance. I did a search on the FCC and a license for North Central Texas Services shows up on that frequency which they are also licensed for 464.1000 down in Cedar Hill. Doing an address search for the licensee's address shows up as belonging to Careflite out of Grand Prairie. So I am guessing this could be a frequency maybe for Ellis County? Maybe someone else can confirm what I am hearing.

That's pretty much what I had to do just to get any type of signal out this way. I am still hearing it out here right now but it's still very weak. Hopefully the conditions improve so I can get a decode running for a bit.

Hi Matt and group -

Yeah, myself and a few others posted activity on the frequency a while back. It is the Ellis Co. Ops frequency for Careflight ground down there. I believe its 811 that is the medic, maybe more. But, it was heavily used between rescue and the birds on a very serious accident there not too long ago. Definitely a good one to keep in the scanner bank if you like monitoring Ellis Co. If something bad goes down, you'll most assuredly hear some activity here.

Hey Blaine and Daniel,

Thanks for the confirmation. I am guessing I should pay more attention to the group. Hehe. Looks like I will have to put this one in my radio as well and keep a listen out on it.

323.300 is KZFW not sure where in NE Tx it is located
317.750 is Cumby paired w/132.065
141.075 is used by the TBirds.

Cheers

Let's see if I can mess up one more frequency and confuse everyone :)

I was referring to 323.8 when talking about the SCW-1 EAM traffic in the last e-mail. I missed that Blaine mentioned 323.3. I've never determined where this ARTCC transmitter (323.3) is either. I know it's used in East Texas a lot but that's about it.

Sorry for any confusion...

Brian

This is one of the frequencies you will hear the STRACOM EAM (Emergency Action Messages) on. The USN SCW-1 E-6B aircraft out of Tinker AFB can be heard on it if they're within monitoring range. They'll simulcast the EAM over 11.175 (and other HF frequencies) as well. I've never heard any Barksdale B-52 (DOOM/SKULL) traffic on it. Interesting. ..

323.3

Several DOOM and SKULL flights on this frequency
throughout the early afternoon contacting Fort Worth
Center. Don't have this one listed. I'm thinking it's
"possibly" associated with the Ardmore site or
maybe the Cumby RCAG sites, as one of the flights

switched to 317.75 after this one.

I used to be in Air Force MARS about 15 years ago.
They may have changes some things since then but as far as I know
You have to have a ham license (any class).
You have to have HF capability.
You have to participate a certain number of hours each quarter.

There are 3 MARS branches, Army, Air Force, and Navy-Marine Corps.
For more info see their web sites:
http://www.netcom.army.mil/mars
http://www.txarmymars.org
http://public.afca.af.mil/library/factsheets/factsheet.asp?fsID=7037
http://www.qsl.net/aga4dy
http://www.navymars.org
Maybe somebody who is currently a member can help you more.

Tom

A matter of personal preference, but the choice of many
on this list are either the BC396/BC996 or the GRE PSR500 & 600.

And don't forget Uniden is coming out with a new scanner
the 996XT.

Of course, if ya got the dough....the best "radio" is a Motorola
XTS-5000....:)

Be prepared to have plenty of extra money to make the
transition. These radios aren't cheap. Personally, I have
the GRE PSR-500 and love it. Great digital decoding, and
NAC decoding & search.

Also, be prepared to spend extra cash on a software program
to input frequencies, etc.

You'll probably find there's two schools of thought, Uniden or GRE. The Unidens seem to make more sense in the way they program. If you're looking at a handheld I'd go the 396XT. The 996 XT is coming out in a few months and I would wait for it rather than getting the current 996. Not a lot of differences from the non-XT but NAC decode would be worth it for me.

I have 4 of the 996 and one 396. I've also recommended these for a couple of TV stations in the area. FOX 4 has bought these for their news units and are running them on the assignment desk as well with good luck. I have one sitting on my desk now waiting to be programmed for another news project.

Another plus is Paul Opitz is on this list and several others. He's a production manager for Uniden and gets input from users first hand. Uniden also includes the software and programming cable with their products.

Bottom line is both companies make good products. The way the user interfaces with the radio is very different (at least to me!).

Terry

Topic: 30146 Message: 30146

I'm receiving an ARTCC or Regional Approach/Departure transmitter this morning on 353.65, one of the Navy Fort Worth GCA/PAR frequencies. I know 981.6 is another GCA/PAR frequency this happens on occasionally, but this is the first time I've heard it on 353.65. The 353.65 site is too far off to be heard clearly out here by the base, but nevertheless, it can be heard for the most part.

If anyone else should plug in this frequency and receive the air traffic control tower from their location, please let me/the group know what general vicinity you hear it in. I'd be interested in knowing what area it may cover.

Brian

Thanks David. I'm guessing that from Flower Mound you probably would hear the DFW International Airport sites so it might be the Alliance site being heard on 353.65 this morning. I get the Alliance site good sometimes and about a scratchy as I was getting 353.65 this morning at other times. Sometimes, I don't hear the Alliance site at all. I'm not sure where many of the DFW Regional A/D sites may be, but for my area 257.95 is the primary and strongest and is paired with 125.8. Most all inbound and outbound traffic from the base uses one of the two frequencies.

Thanks for the report David...

30153. Two MilAir Unknowns - 141.9 & 290.5

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-06 20:17:07 UTC
From: commscan

Hi Group,

I was listening a little earlier this afternoon to some aerial refueling (AR) work on 141.900 AM. I☐ve never confirmed who this is and I☐ve periodically heard the frequency used (as well as some other VHF-Hi AM freqs.) over the years for AR work. In 8/2003, I was able to confirm this frequency, 141.900 AM, as a backup for the Rivers MOA. It☐s also Ellington☐s F-16 squadron☐s Push 07-V. Has anyone else ever caught anything on this frequency that may help determine who☐s using it for AR work?

Also, I was hearing traffic from an aircraft on 290.5. It☐s possible this is Kansas City Center (ARTCC), but I don☐t think that☐s what I was hearing today. The last time I noted traffic on this frequency was 9/5/03. So it☐s been 5 ½ years since I☐ve heard anything on it (a lot is due to my lack of monitoring MilAir lately I☐m sure) and I could never find a listing for the frequency other than in the USIFR Supplement (wasn☐t in the USVFR Supplement). And since 2006, these publications aren☐t as easily obtainable as they use to be. Any ideas on 290.5 anyone?

Thanks

Brian

Hi Brian and group -

FWIW - I have heard activity on both of these frequencies
but I don't have confirms either. I believe 290.5 "may" be in
use up around Wichita Falls, but not sure. Seems that if it
was, it would be too close in frequency to the Abilene RCAG
on 290.55. But I haven't heard that freq active recently, so
maybe it's changed?

The 141.9 is anyone's guess right now. Honestly, just from
searching I have come up with so many a/a hits on UHF &
VHF, it's hard to track them down. Usually I have the
PRO-2006 scanning the "known" freqs, and the BC 780
"searching" and sometimes I can correlate the two with
what I'm hearing on the "known" freqs and vice versa.

Although I didn't post it because it was rather brief, 278.5
a FWARTCC freq was extremely active yesterday with refueling
training over Wichita Falls. Never got any aircraft callsigns, but
it was fun listening to the newbies get evaluated.

Earlier today I do know 288.3 for Rivers MOA was active,
but again, didn't get any callsigns. Not sure if what you heard
is related or not.

Also, lately, I have been listening to Whiteman AFB online on
the Proscan server. Pretty cool stuff. A ton of callsigns as well
as the B-2's. Very fun listening. I usually have that going in the
background on the speakers.

Hello All,

Thanks for the feedback Blaine. I too heard practice AR work yesterday. It appeared that TURBO ## (McConnell AFB 22nd ARW/931st ARG KC-135R aircraft) had some newbies onboard and they practiced refueling two Lockheed F-16s (ROCKET 07 & 17). I heard the actual AR work being conducted on 284.1, which is Lockheed's U-01 Primary channel. They also periodically switched to 290.3 (at the time I was thinking Ft. Worth Center but I see now it was Amarillo's Regional A/D). I never did catch the Center's frequency being used for the ATC traffic but I bet it was 278.5, the frequency you were listening to Blaine. I imagine Lockheed wasn't the only refueling aircraft during the training yesterday but I bet the AR track was probably used a few times.

The more I create, add new data, and organize my MilAir information for reprogramming the AOR AR8000, the more I realize how much PC programming helps!!! I'm starting to wonder how in the world we programmed 1000 channel radios with alpha tags and all the modes, step sizes, etc back 10 years ago :) If all works out well, I should be able to reprogram the AR8000 by PC before too long. But I still cannot stop programming stuff in via the keypad either.

Have radio, will program... :)

Hi Group,

I just got finished doing a little research in the last published USIFR Supplement (the one you could get before they "classified" or whatever they did to the publication) pdf document. I realized I'd been thinking correctly on 290.3 all along. I guess I'd just forgotten to update my own records. 290.3 serves as a Fort Worth ARTCC Abilene/Brownwood low altitude discrete transmitter site and also as Regional A/D control for the same areas too. It is an air traffic control frequency as well as a regional approach and departure frequency.

So, I guess the AR work I heard yesterday with the two Lockheed F-16s was being conducted in the Brownwood MOA area and not up around Wichita Falls where Blaine heard some more AR training being done.

I have in my own personal database 290.3 listed with Amarillo International Airport and as Amarillo A/D Control. I have a sneaky feeling that I meant to type Abilene when I typed Amarillo.

30157. Re: TGID being cleared for Dallas Local Gov (MOT IIi Hybrid)

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-07 02:23:47 UTC
From: hiegtx
Topic: 30150 Message: 30157

I'm assuming that you have the system set up as a hybrid, with the fleet map, and all your talk groups are in the Type I format (003-01) as opposed to Type II (1664).

I just tried reading back my 396XT into FreeScan to see what I get. I had a few leftover talkgroups (three to be exact) in Type I format. That's required if you set the system up correctly as a a hybrid. These were Fair Park related, & uploaded to the software as zeros, so they did not transfer correctly. Is that what you're seeing?

Quite some time back, I edited the system & converted it to a straight Motorola Type II 800mhz system. With the exception of the stray talkgroups mentioned (which did not work anyway after conversion, but I had not gone back & deleted them), all talkgroups in this system in the 396XT (as well as the 396T, 330T, etc) are entered in the Type II format. Those all downloaded to the scanner correctly, & upload back up into FreeScan correctly for me. (I haven't tried ProScan, so can't help you there.)

There are only a few talkgroups that are still Type I.
Looking at the system: http://www.radioreference.com/apps/db/?sid=18
Besides the three for Fair Park, you see some under Public Works. But, in fact, a number of those have apparently been replaced by Type II TGID's listed below the Type I's. If you move the system to a Type II, you won't miss much of consequence.

If my guess on your error is correct, you might want to pass the problem on to the software authors. There are separate dedicated threads for each program on RadioReference in the software forum:
http://www.radioreference.com/forums/scanner-programming-software/

Hello All,

You hit the head on the nail! It appears it was a sonic boom. Navy Tower just told Air 1 that it was an F-16 that created the boom and they were going to make another pass. The first pass shook the shingles off my house (not really) and now that I know what it was, it was COOL! I hope they do it again...:)

I know they do "supersonic runs" on purpose with the new F-16s as part of the test flights before they deliver them although generally that is not done in that area. I think it's done further north towards the Red River over the less populated areas and at a higher altitude. I know in the past Northwestern Denton County has received the same kinds of calls of explosions that turned out to be Lockheed. In this case it might have been that they just got a little fast without realizing it.

I've been listening to the SPADs (local F-16s) and the Lockheed traffic too today, but I never did hear Lockheed mention the boom. On Lockheed's V-02 (123.4) there have been some foreigners from who knows where flying and chatting for almost 2 hours. I've heard them say "Lockheed" and a few other words that are in English, but I have no idea what else they're saying. If I had to guess, I'd bet one of these guys were the sonic culprits. It's probably normal wherever they're from :)

Lockheed's normal sonic boom (and other flight test runs) track is VR-118.
It runs between just west of Fort Worth and the Abilene area. I'm sure they
have other areas they do runs in too, but their "normal" track is VR-118.

I know they do "supersonic runs" on purpose with the new F-16s as part of
the test flights before they deliver them although generally that is not
done in that area. I think it's done further north towards the Red River
over the less populated areas and at a higher altitude. I know in the past
Northwestern Denton County has received the same kinds of calls of
explosions that turned out to be Lockheed. In this case it might have been
that they just got a little fast without realizing it.

Many times I hear them getting clearance into "Lockheed North" and then they RTB via the "VR-118 Recovery". I didn't hear where they were today but Lockheed North looks like it runs basically from West of Ft. Worth north to the Red River and West towards Wichita Falls. There is also a Lockheed South that overruns part of the Brownwood MOA. I never knew where these airspaces were until I found them today on the SUA Map page - http://sua.faa.gov/sua/Welcome.do - If you pull up the unscheduled airspaces they are shown on the map and I've only ever looked at scheduled airspaces before. Interestingly enough there is also a "Dubie Orbit" and a "Castor Orbit" airspace that runs East to West directly over the metroplex and farther west. I've never heard any traffic related to that but I wonder what it's for.

WAG, but "usually" orbits are associated with refueling tracks.
I know there is quite a bit of training going on at times on the
refueling tracks around here, with a lot of it going on right
above our heads. I would assume that Dubie and Castor are
holding or training tracks. Personally I heard never heard them
referenced, but I do know that the UHF freq for the Dallas RCAG
sector above us (379.25) and the Ardmore RCAG site further
north (351.85) are active on an almost daily basis with high
altitude craft transiting the area, and oftentimes on refueling
tracks and training.

Story about the sonic boom from the Ft. Worth Star Telegram

http://www.star-telegram.com/804/story/1364171.html

From this description it sounds like they were indeed inside the Lockheed North airspace. I have never gotten to hear one of these despite how regularly it seems to happen (I think it was 3 or 4 times last year). I wish I could hear one!

Hi Brandon & Group,

Lockheed has numerous routes they use, but in the past anyways, they weren't supposed to do supersonic runs except in VR-118 due to the low populations out west. I saw your posted link to the Fort Worth Star-Telegram story and it looks like they were running in Lockheed North yesterday though. I still think it was the foreign pilots (still don't know what language they were speaking) on V-02 that did it. I imagine they were not aware they couldn't do it where they did. The part about "humidity in the air" may be true, but it sounds a little fishy to me and more like an excuse for an unintended incident :) But that's all just a guess.

Thanks for the great SUA link. I've been trying to find these maps online for years (at least a few years ago). I'm glad they haven't "classified" these.

Here's a quick question I've wondered about. The DoD/NOAA US IFR and US VFR Supplements that we can no longer get online were nothing more than a pilot/scanner enthusiast's frequency and aviation detailed (landing instructions, NDB, VOR, etc data...the same stuff you can get on AirNav.com) directory. Why they became unavailable is beyond me. But can we, the general public, still buy these hard copy publications from NOAA? And if not, can a pilot buy or get them?

I've got volumes of the printed publications for the entire world in storage. I use to get the old hard copies from an NASFW friend (1999 era) when the new, updated publications were received (more or less every 6 months I'd get their old copies). It's been a little over three years since the IFR & VFR Supplement were pulled offline and we could no longer download the pdf supplements because of the perceived "security threat". But the purpose of these publications is for a pilot's use. So can any pilot with a license get them or are they strictly banned from anyone unauthorized (except military pilots maybe, I don't know) today?

Does anyone know...I'm wondering who the publications are for today? Thanks...

Brian

Well, the theory is, from the government, in matters like this, that small bits and pieces of information would not hurt anything, but accumulated pieces of data and reference compiled over time, could threaten and hurt national security....it's that "compartmentalized" deal. I don't buy a lot of it, but you can believe what you want to believe. Just general paranoia in many cases, IMHO. But I don't want to get into a p***ing contest, so I'll stop there.

> And if not, can a pilot buy or get them?

Best bet is to ask the pilots here on the list. I know there are several. I know that you have to establish an account now with DOD to access that stuff online. But I'm not sure if you can special order through pilot shops or not. I am taking a WAG that somehow you have to prove to DOD that you are military or a contractor in order to access that data. Thing is though, probably 90% or more of the data is in the public domain. It has to be for aviation safety. For instance, let's take Sheppard AFB. Well, it is an Air Force base, but it is also the regional airport for Wichita Falls with commercial and civilian aviation flying in and out on a daily basis. So you just can't say "Oh, were not going to give any of our information to this Delta Connection flight because we are a joint Air Force base". That's ridiculous!. So primarily I guess they are trying to keep under wraps the discrete squadron frequencies, I suppose.

> I've got volumes of the printed publications for the entire world in
> storage.

When I lived in Tampa Bay, I'd go over to the FSS office at St. Pete Clearwater airport, and ask them if they had any recently outdated IFR Supplement they could give me. There were always a few laying around that they hadn't shredded yet, and they were kind enough to give them to me. I initially had to explain my intentions, as they were a tad nervous giving them out. But at the time, I just told them I was an aviation enthusiast, that also liked to listen to the military aircraft out of Macdill on my scanners and radios, and once I explained that, they were cool about it. Do that nowadays,

and all the terror paranoia nutcases at an FSS would probably
call the FBI on you!

Ben,

There was a news story on WFAA-Ch8 back in March, and also a brief thread about the same subject over on Radio Reference. Basically, the the story was that Carrollton, Farmers Branch, and Addison would be more proactive in sharing certain resources between their police departments. The fire departments already work together via automatic assist, dispatching the closest equipment regardless of city. Dallas also participates, and you'll often hear Carrollton or Addison units on DFR channels responding. That's been in place for years. Apparently, the new agreement will expand cooperation among the three cities police departments. I would guess (guess, since I have no direct, inside knowledge) that the new talkgroups may possibly be one way to formalize that cooperation with a standardized set of radio id's.
Link to the story on WFAA:
http://www.wfaa.com/sharedcontent/dws/wfaa/latestnews/stories/wfaa090325_wz_threepd.6cbcc71d.html

The very short lived thread in RadioRef:
http://www.radioreference.com/forums/texas-radio-discussion-forum/139708-addison-carrollton-farmers-branch-creating-tri-cities-police-consortium.html

I added these groups to my Carrollton trunked system file when I noticed the update on RR, but so far, I have not caught any activity on any of them. I may leave a scanner on log/record to see if I pick up anything during a weekday.

The Yaesu FT-60 is the best bang for the buck. ANLI makes some
inexpensive replacement antennas as well..

Check www.eham.net for reviews.

Hi Group,

I was listening a little earlier this afternoon to some aerial refueling (AR) work on 141.900 AM. I've never confirmed who this is and I've periodically heard the frequency used (as well as some other VHF-Hi AM freqs.) over the years for AR work. In 8/2003, I was able to confirm this frequency, 141.900 AM, as a backup for the Rivers MOA. It's also Ellington's F-16 squadron's Push 07-V. Has anyone else ever caught anything on this frequency that may help determine who's using it for AR work?

Also, I was hearing traffic from an aircraft on 290.5. It's possible this is Kansas City Center (ARTCC), but I don't think that's what I was hearing today. The last time I noted traffic on this frequency was 9/5/03. So it's been 5 ½ years since I've heard anything on it (a lot is due to my lack of monitoring MilAir lately I'm sure) and I could never find a listing for the frequency other than in the USIFR Supplement (wasn't in the USVFR Supplement). And since 2006, these publications aren't as easily obtainable as they use to be. Any ideas on 290.5 anyone?

Thanks…

Brian

30180. DPD chase on 460.42500

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-11 21:34:58 UTC
From: willie_brux
Topic: 30180 Message: 30180

Hard for me to keep up with details because other things in the house, but there were also one or two individuals bailed and the driver is still running.
Just a heads up.

Topic: 30180 Message: 30181

2 suspects bailed and were arrested. The other two fled in car and after a while they bailed and are in custody. 3 H/M and 1 H/F robbery suspects, all in custody.

Suspect you'll see some of this on TV. Dispatcher was warning officers media was there.

Terry

From: Terry
Topic: 30180 Message: 30182

Here's the press release for those that tuned in:

At approximately 4:05 p.m., patrol officers ran the plate of a vehicle that came back stolen in an Aggravated Robbery on April 25, 2009 (Service #115781W). The vehicle was occupied by four (4) suspects, 1 L/F and 3 L/Ms. The officers followed the stolen vehicle until additional officers arrived. At approximately 4:14 p.m., the officers turned on their red lights at I30 and McCarthy at which time the suspects began to flee. Midway during the pursuit, 2 suspects (L/F and L/M) exited the vehicle and attempted to flee on foot while the other two suspects continued to flee. The officers apprehended those suspects without incident. At approximately 4:40 p.m., the other two suspects exited the vehicle and attempted to flee on foot. The suspects were subsequently apprehended a short time thereafter. There were no reported injuries thus far during this incident.

They might as well just broadcast, "No more beating the suspects. The public is watching!"

That's what they really mean.

Rob

Hey, you know how it is. The adrenalin is flowing, brains cells are frozen and stuff happens. At least the dispatcher was thinking! Pretty decent chase. I can't believe they didn't crash considering the time of day and traffic. Really nice they got all 4 suspects. Bet they see some serious time, like a month or two!!!

30185. BCD996T Owners In My Area?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-13 15:46:20 UTC
From: craig.cool@att.net
Topic: 30185 Message: 30185

Looking for BCD996T owners in McKinney, Allen, Plano, Richardson, Texas area...

Please let me introduce myself... My name is Craig Cool, I'm retired (age 61) and live in a seniors only apartment community in Allen, Texas. Been scanning for some 20 years now. Last January I sold my 5 scanners to finance a new BCD996T. It works great and has firmware version 2.00.06 which I wish to upgrade to 3.02.00.

I'm running an Apple iMac 20" Intel on Leopard 10.5.6 and have downloaded all the necessary files including the V3 Key onto a CD-R disc. Of course none of these files can be opened or used on a Mac.

I'm looking for someone in the area that has a BCD996T, a Windows XP machine with a DB9 serial port, and the knowledge of how to do this rather complex update.

Would you be willing to help me and whereabouts do you live? Thanks in advance for your response.

Craig Cool

While I certainly agree with your prediction, I must have been out of the loop during the DFR/EDACS fiasco. I've seen a lot of DRF fisacos in the last thirty years, but I guess I missed that one. When was this?

Hopefully it's at a typical pool acid concentration, which is quite low. If so, that sounds like a job for a baking soda and water solution. It's not quite as hazardous once it's turned into salt...

I worked in a plant that regularly had 55 gallon drums of 70% HF acid sitting around in concrete floored areas. I'm glad I didn't work there very long. (The worst part was that they actually piped it around the plant from a 250 gallon tank.)

You definitely don't begrudge high salaries for the pipe fitters at a facility like that.

I can't remember if the 246 has Close call or not. if
it does, that is an excellent function, and I HIGHLY
recommend it. I will be using Spectrum Sweeper on
my PSR-500 as well as the above list.

This is my first chance to catch up a little since I posted to Air Boss frequency. Unfortunately, events have kept me from listening or attending the air show so I haven't heard anything other than a B-52 doing a flyby Saturday. I imagine the weather kept the crowd pretty small too.

I don't know if there was a UHF Air Boss frequency or not. I don't recall ever hearing a UHF Air Boss channel at an airshow, but I wouldn't be a bit surprised if there was one.

I look forward to seeing any reports of any new frequencies that might have been found when I get caught up on e-mail.

BTW, 284.725 was being used (Tower Backup to 269.325) the day before the airshow. I believe it was used during the military personnel airshow given on Friday (or whichever day the pre-open house show for military personnel and their families was given).

On 5/16/2009 11:43 PM, commscan wrote:

> I imagine the weather kept the crowd pretty small too.

My daughter and I attended Saturday after the rains died down. It was actually pretty pleasant. Little light breeze and the rain definitely cooled things down.

The crowd size had definitely diminshed, or so it seemed, but it was also later in the day. And honestly, I really didn't have anything to compare the crowd size to as that was the first time I had attended the display/show at NAS. I must say that while I enjoyed it, the Alliance Show just kicks ass, and is MUCH better. BUT, when you have the financial funding of the Perots behind you, well, you know the rest of that story!

As usual, it was just more and more difficult to see and copy down or photograph the 20 channel preset cards in many of the craft that I was interested in...i.e. the Navy F-18's, the 301 F-16's and even the TX ANG C-130's. All of these were on display but either had the cockpits closed, or you could only do walk arounds, and not view the all important cockpits and radios for frequency and use confirmation. There were a couple Blackhawks from Nellis, and they had their preset cards in full view, but honestly, I could care less about those...LOL... I was hoping those had been from Hood, but they were not.

I'd love to get up into the cockpit of a B-52, but every airshow I have ever attended (and there have been MANY), the pilots always have the little airstair to the cockpit down, but do not allow folks up into it to check it out. It would definitely be cramped, but still fun. They were allowing a look into the cockpit of a C-17 but I declined after looking at the enormous line that stretched to the back of the aircraft. My daughter did get to sit in one of the Blackhawks, and sit in the pilots seat of a C-9, but that was about it.

> I don't know if there was a UHF Air Boss frequency or not.

Sometimes they use one, sometimes they don't. Oftentimes, they just override the ground frequency (VHF and UHF) and use that as air boss, since the field is closed for takeoffs and landings anyway because of the show. It SEEMED for this show, secondary tower freq of 284.725 was being used. All in all, during the actual demos, I really did not hear much of anything, as in SILENCE... Quite unusual. The activity on the airwaves didn't even hold a candle to the craziness at the Alliance show, where everything

is hoppin'...from GMRS to FRS, to vendors, to air band, to CAP,
and the list goes on and on...

Needless to say, I'm anxiously awaiting the Alliance show....

Blaine

Anyone know who uses this frequency in our semi-N. Texas area? I've been hearing traffic on it (AM modulation) all day but have been too busy to pay much attention. They're on it even now (6:40 PM). I thought SCALP was a callsign they were using, and it may be? But if so, then this should be Barksdale B-52 bombers. But they do not usually use the VHF-Hi band for too much traffic.

If anyone can catch the user or any clues, please post it! I have to run.thanks.

Could the callsign have been SHEP? I am at work and don't have my
list handy but this looks like a familiar frequency and if they were
using SHEP I believe it belongs to the 89th FTS "Banshees" at Sheppard
AFB. They are flying both the T-6A and T-37 with the T-37 being
phased out this year and I think they only use SHEP for the T-6
flights. I'll check tomorrow and see if I can confirm my suspicion...

30207. RE: [dfwscan] 140.800 AM

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-19 03:49:18 UTC
From: commscan
Topic: 30205 Message: 30207

Hi Brandon & List,

I don't think it was the SHEP c/s, but I could be wrong. Thanks for the additional information Brandon. I didn't know the USAF Air Education Training Command (AETC) was phasing out the old T-37 model aircraft. They've been around for a long, long time.

I may need to check, but aren't the T-6 aircraft a much larger framed aircraft? They're sort of a cross between a small passenger (10+ people I'd guess) plane and a cargo plane I was thinking. I know Randolph AFB (San Antonio) has a bunch of AETC T-6A aircraft they fly and they frequently pass overhead DFW. A lot of times you can hear them calling Randolph Dispatch on 372.2. I may be wrong about this and I may be thinking of the T-43 AETC aircraft? It's been too long since I've paid attention :)

On 140.800 AM I was pretty certain they were using SCALP (Barksdale 93rd BW B-52 aircraft) or possibly even SCOUT (970th AACS E-3 AWACS out of Tinker...USAF Reserve squadron). It may have been SCOUT that was being used, but I doubt this was the AWACS using it. They use it in the front end of the aircraft for contact with ATC and wouldn't be as likely to use it to talk back and forth. Since the callsigns are generally picked by the squadrons and are not really regulated by the military, there could be 50 different users of SCOUT (or SCALP for that matter).

It was quiet a few years ago that I heard some Barksdale B-52s using a 138 MHz AM frequency for air-to-air chat. I only heard them two or three times. The other thought I had was this could be Tinker E-3 AWACS planes possibly. Since they don't go to their (the Air Combat Command) own frequencies when playing out battle exercises like they use to, but instead, they switch to the frequency (like an air-to-air for instance) of whomever they're playing with nowadays, this could've been the case here. Still, I don't think they would've been using the ATC callsign used by the front end (cockpit) though.

I've plugged in the frequency now and plan on seeing what I can catch on it. I'll be sure to post anything I find out for those interested if someone else doesn't beat me to it first.

Thanks for the help and the update on Sheppard's plans Brandon...

From: Brandon Thetford
Topic: 30205 Message: 30208

You are indeed thinking of the T-43. The T-6A Texan II is a single engine high performance propeller driven aircraft with a student and instructor seat. Even though it is a propeller driven airplane it's performance is close to that of a jet and the T-37 so it is being used as the primary flight trainer in both the Air Force and Navy.

30209. Heavy VHF Milair

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-19 17:17:33 UTC
From: commscan
Topic: 30209 Message: 30209

Right now:

140.800

138.375 - BEAST ## possibly (new 301st FW channel?)

142.400

143.975

140.350

140.850

All of these, and probably more, are active right now (12:15 PM) and all in AM mode.

Brian

Ft. Worth, TX

Well, that new AR-8000 you got must be pulling in
some faint s**t, or else they just stopped chatting.
I went into search mode after you posted, and
haven't heard a damn thing. Oh well....:)

You got the 8000 connected to the outside antenna?
I'm so jealous. That, the PRO-43, the Yupi, and well,
I DO have a PRO-2006, are all kick ass for milcom...:)
And yes, contrary to some others thoughts, I think the
BC780 does a damn good job too!

30212. RE: Heavy VHF Milair

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-19 21:14:54 UTC
From: commscan
Topic: 30209 Message: 30212

Hi Blaine & Group,

They're up again right now on a few frequencies. I went outside and cut the grass, so for the last 2+ hours or so I haven't been listening. But there is definitely activity on some of the channels now.

I'm using my BC780XLT and BCD396T to pull in the signals (with outside antennas). I have the AOR hooked up but I've decided to await a PC cable/box to continue programming it. It'd be my luck to get all 1000 channels finalized and then have to reset it for some reason (as I did with my Yupiteru MVT9000M a few years ago) :)

On 142.4 AM, SNAKE 01 and SNAKE 02 are the primary talkers right now. SNAKE is probably the most common callsign out there. Every squadron and their brother's squadron use this callsign it seems. I'm guessing it is the Buckley ANGB T-38 aircraft I've heard using the callsign through the years. They come down and play at various times. Back in the day, when I could see stuff much better, I confirmed a SNAKE ## T-38 with "CO" on the tail visually at NASFW. This was one of the Buckley birds. But it could be anybody.

I'm going to scan through the ARTCC frequencies and see if I can hear them checking in so as to get an idea where they are playing.

One last thing I probably should mention. I don't remember if the Buckley T-38 aircraft are the AT-38 (Attack Trainer = AT) or not, but these guys sound like their doing the ACM combat stuff so if it is the Buckley birds they probably are AT-38 aircraft.

30213. More Milair

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-19 21:33:19 UTC
From: commscan
Topic: 30213 Message: 30213

149.4 is also being used. I thought I heard WIZARD 02 or GIZZARD 02.

If anyone's interested in searching and listening to the milair stuff, and if you have a scanner that'll allow you to program a few search bands, add these:

137.000 - 144.000 MHZ (AM)

148.000 - 150.750 MHz (AM)

225.000 - 399.975 MHZ (AM)

The first two bands are where I'm catching the action today.

>
> Anybody know who / what type COBRA is?

Wouldn't be surprised if it was some squadron playing in the Washita MOA's around Sheppard. What squadron is the question though. The fact that you were "relatively" close to Shep, and hearing a possible ground controller leads credence to it being some kind of possible ACM training channel for the T-38's, but that is just a WAG. Who uses the COBRA callsign? I don't have a clue. Shep changes their callsigns quite a bit. They have some commons, but they still change.

Might have been even units in the Falcon Range up in OK.

Myself and Brian have been picking up almost daily transmissions of aircraft throughout the mil am hi band, so it literally could have been ANY squadron.

I'd love to get a preset list of all the units from Sheppard, Vance, Altus, Dyess, Barksdale, Ellington, and all the bases down San Antone way. Heck, with those, at least we might even know who we were listening too. I try to get them at air shows, but the jet birds, it's near impossible without climbing in the cockpit, which... forget that!!...:)

Wouldn't be surprised if it was some squadron playing in the
Washita MOA's around Sheppard. What squadron is the question
though. The fact that you were "relatively" close to Shep, and
hearing
a possible ground controller leads credence to it being some
kind of possible ACM training channel for the T-38's, but that
is just a WAG. Who uses the COBRA callsign? I don't have a clue.
Shep changes their callsigns quite a bit. They have some
commons, but they still change.

Might have been even units in the Falcon Range up in OK.

Myself and Brian have been picking up almost daily transmissions
of aircraft throughout the mil am hi band, so it literally could
have been ANY squadron.

I'd love to get a preset list of all the units from Sheppard, Vance,
Altus, Dyess, Barksdale, Ellington, and all the bases down San
Antone way. Heck, with those, at least we might even know who
we were listening too. I try to get them at air shows, but the jet
birds, it's near impossible without climbing in the cockpit, which...
forget that!!...:)

I just hear stuff on 3 freqs that I had heard in the past but not enough to ID.

I wasn't paying attention to what frequency it was (140.??), but some pilot was complaining about his radio being all messed up. They sounded like FWNAS F-16s heading to the Brownwood MOA.
He asked another pilot for the frequency for "Ops" which was 143.750
Then he called "Ops" on 143.750 and asked what frequency "Victor 17" was and it is 138.950.
Then I heard him calling "Regional" on 269.150. (probably DFW TRACON)
I never caught the callsigns because they talk too fast.

30220. Did someone recently post something about Six Flags?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-22 18:26:07 UTC
From: Jon
Topic: 30220 Message: 30220

I thought I saw something about Six Flags being posted on here recently... but I cannot find it anywhere.

I just want to make sure I have the most up to date frequencies since I work very near by.

I have the security and the rides channel but I thought there were more.

Thanks,

Jon B

I don't know how much of the lake is Fort Worth now vs. County, but if Fort Worth patrols it, they are on MAR2, just like Lake Worth. So it's either going to be FW, County, or TPWD, which they use TC County radios and their VHF channel. I don't think the Trinity River Authority has their own lake patrol. And don't know if Wise County has any play in this even though only a little bit of the lake goes into Wise. All my years out there I have never seen a lake patrol boat, unlike Lake Worth and PK. If you see one, see what kind of antenna they have on the boat, if they even have one. They might be using HT's.

Good luck,

David, KC5RHB

I've been using the Energizers for a while for my camera and scanner. I actually made a rechargeable battery pack out of those batteries using the existing pack from my Uniden scanner. It was cheaper than paying $20 for a new pack. But so far I have had no problems regarding memory, charging, or dying too quickly.

I was in a law enforcement marine course a couple of weeks ago with several officers that patrol various lakes in the Metroplex.

Eagle Mountain is patrolled by the Tarrant Regional Water District Police and yes they have several nice patrol boats.

Fort Worth Marshals patrol Lake Worth and also work Marine Creek Lake occasionally.

Brazos River Authority patrols Lake Granbury, Possum Kingdom and several others.

Stay safe all...

I would assume the lake patrol is on the Fort Worth trunked system but they have one conventional repeater pair licensed at several sites.
http://www.radioreference.com/apps/db/?cs=WPBE486
I don't know what this is used for.
I never heard anything on it when I live in Tarrant County.

Tarrant Regional Water District also has a whole bunch of non-voice flood waring system licenses on 406.125.

I HATE ENERGIZER!!!

As blunt as it is that is what they get from me. Over the past 5 years I have had my run of batteries and I can tell you what works best for me in a scanner, camera, and my mouse. (This is my own experience) Believe it or not for the longest time I was using just 4 Rayovacs rechargeable with the charger. They worked great for almost 2 years with a lot of use. But I needed to get some new batteries when I bought a new scanner. I bought a 4 pack of energizers and after charging them and using them just a few hours my scanner went dead. I was mad. I thought I had a bad batch or something so I just kept them and went and bought some more energizer rechargables as they were all that walmart had at the time on display or something. Well same thing. After a charge they would just die out. So, I changed chargers. Same problem. So, then I went out and bought some Duracells. All I can say is what a difference. No problems at all. I ended up getting a total of 8 of them. Then i got the Maha batteries after this and they also work great.

So, I did a check on these energizer bats and after just one charge by morning they were almost drained just sitting on the counter. So, forget putting them in your scanner. I called energizer about this and they refused to give my money back, didn't care about my complaint and wanted me to write a letter and all this hassle when all I wanted to know was why I was having this problem and get my money back.

Also I found a Duracell bat laying around the other day that was over a year old that I have not used. It was in my shed. I checked the charge on it and it was just under 1.2. That sells me on them right there. I was so mad at Energizer that I was going to make a youtube video of the problem. However I don't think that is fair to them cause it could come down to how they are charged or something like that.

But anyway yeah if you want some good batteries I would say duracell for sure and the maha's. Also Rayovac has worked real good for me. Over 2 years and still going.

Does anybody have an 0pinion on the POWEREX cells?

Currently my BR330 has some GP industrial cells and they really suck.
Run time is under 4 hours.

Yeah I don't mean to be so harsh on them but my experience was just horrible. Nothing like going somewhere and it just starts beeping on a fresh set of batteries. Next thing you know I have to pull off and buy a set of batteries at the store just to get me by. I just assume it comes down to the charger or something.

Also I think I am using PowerX batts not Maha's can't even remember. They are in my scanner out in the truck.

From: Terry
Topic: 30224 Message: 30238

I like the Duracell batteries. The Duracell charger, not so much. It cooks the batteries and I had a set explode.

The Maha chargers however are great. I have 3 of them that stay loaded 24/7 with Duracell batteries. They just work!

It's been a while but the last charger came from this place and they seemed decent in price and service.

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-25 05:11:24 UTC
From: Michael Stuart
Topic: 30223 Message: 30239

It's been a year or two since I listen to the lake
patrol but they use to be on 156.8000 on the marine
band. When something happens on the Azle side you
can hear them on Azle PD channel 155.3100 sometimes
but haven't heard anything this year.

For those of you who have an Ipod Touch, the EdgeRift Emergency Radio application is a great application.

With Emergency Radio, listen to over 900 live police, fire, EMS, and other emergency frequencies. Tune in to everything from the New York Fire Department (FDNY) to the Los Angeles Police Department (LAPD). Follow the conversations with ease using the built-in police and emergency scanner code list. Conveniently locate nearby frequencies using the Nearby feature. And quickly access your favorite frequencies with the Favorites list.

A great application where you have wireless access!

The Game Warden (TPWD) operate on thier VHF frequencies and they have Tarrant County Radios (FW TRS) for those Officers that work in the county, I dont know what call sign they use on the TRS, but they have access to it. There are like 2 or 3 TPWD repeaters I have heard in the area and they will also get on the VHF talk around frequencies. And you can find those on RR.RHB

http://www.wfaa.com/sharedcontent/dws/wfaa/latestnews/stories/wfaa090525_mo_dairyqueenshooting.18bb299d.html

I was listening to the DPD NC channel on this yesterday evening right after it happened and they were discussing the suspects and their cars, yet for some reason they did not release this info to the media. Is this normal? I'm a radio noob btw. You would think they would have at least released the suspect descriptions to possibly get them caught sooner. They mentioned 4 young black males all wearing red bandanas and maybe shirts? One was seen carrying a semi-automatic weapon. Why would they withhold this from people in that area (especially since the suspects fled to a nearby apartment complex) when it could put them in danger if they didn't know what to look out for?

Thanks for any help or info!

The media have scanners also. However, they typically get their 'publicly distributable' info from a public information officer so they don't harm the investigation or search.

I was listening to the DPD NC channel on this yesterday evening right after it happened and they were discussing the suspects and their cars, yet for some reason they did not release this info to the media. Is this normal? I'm a radio noob btw. You would think they would have at least released the suspect descriptions to possibly get them caught sooner. They mentioned 4 young black males all wearing red bandanas and maybe shirts? One was seen carrying a semi-automatic weapon. Why would they withhold this from people in that area (especially since the suspects fled to a nearby apartment complex) when it could put them in danger if they didn't know what to look out for?

I borrowed a HF rig from my brother to try to listen to the hurricane nets this year. Anyhting else out there to listen to right now? Anything you listen to on a reguler basis?

Thanks Mike...

Rosalyn, information on the radio while usually correct is not always confirmed. When I go to a scene even if I have heard the description or what happened is obvious I get the info for broadcast from an officer/PIO. It just needs to be on the record.

There are times you may hear details police don't want released to the public (caliber of gun, something unusal about a vehicle etc). Some of that makes sense.

In this case you have to factor in the minority issue. Media in general will not release a description involving a minority unless it's extremly detailed. This is a sensitive area! Bottom line is if you see a report that just says " 4 men ....." You can assume they're not white. We don't have to be as sensitive to non-minorities.

I've seen press releases put out by police warning the public of a serial rapest or other such dangerous crimes and race not reported due to description being to vague. This is policy in every newsroom I've been in.

And yes, after all these years cops are finally noticing shows like America's Most Wanted work. We do get a lot more pictires and information a lot sooner than in the past. You're very correct when you say the public should know and could be on the lookout.

Bottom line is if you want to know what's going on listening to your radio is the best option.

30263. RE: EdgeRift Emergency Radio

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-27 14:12:43 UTC
From: Mark Saum
Topic: 5734 Message: 30263

I worked on Wall Street for a while. Every day I saw the "whale teams", the heavily armed police with machine guns and dogs that regularly patrol the area. They need machine guns, body armor and gas masks, but it's a felony for me to carry a .38 snubbie.

I was there during the Republican convention. I saw part of that operation when I had to go to the West side to do some work. I saw the helicopters, the surveillance blimp, 20 cops per intersection, etc. I heard stories of people arrested for simply walking down to the bodega at the wrong time.

I wouldn't put anything past NYPD. New York City is a whole different country.

Only if the radio in question is a ham radio. Possession of the license is not a defense for a police scanner.

Yeah, I can see it now, NYC cops stopping everyone walking down Wall Street to see if they are listening to police chatter. Ya never now about those stock broker types. Bernie Madoff taught us that!.

This is all typed with tongue firmly in cheek.

The times I have been in NYC, I always had a scanner in my pocket. Stopped and talked to cops on the street. Even had my picture taken with some of them a couple times, and none ever said anything about the scanner (or the handgun either, but they couldn't see that!). Ignorance is bliss, because I had no idea that scanners were illegal at the time, lol.

Rosalyn it is important to understand the difference between scanner chatter and what is reportable as fact. But having said that it is also important to understand the pressure put on media outlets to not describe the race of the "suspects," in a crime from black and hispanic groups. Despite the interests of the public in general, these groups have agendas that do not include the protection of the public at large coupled with the political power to pressure media to stop the practice of reporting to the public the race of the offending suspects. Some media outlets have succombed to this pressure, others have not. Welcome to the liberal left wing "New America."

30266. Win 96 program virus?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-05-28 23:28:12 UTC
From: Lee
Topic: 30266 Message: 30266

I downloaded the Win96 software today from Don's web site, and when I unzipped it, my anti-virus threw a flag on the win96.exe file with the following trojan - "TR/Agent.806912.I"

My purpose in this post is two fold, 1) to see if anyone else has experienced this issue, and to see if there are any published fixes, and 2) to bring to light that this file seems to be infected with a trojan in case nobody else has experienced it before.

I suppose while I'm at it, I'd like to make sure Don knows about this so that he can look into it as well.

Anyone have any ideas?

Thanks,
-Lee

30267. Dallas Engine 10

The system stopped transmitting on May 11, and hasn't been heard since. The times when the voice channel was very active at night, no one was talking. It was just silence and probably an automatic test stream being sent. So it sounds like they were just testing the system.

It will be a brand new truck. There are too many highrises in Station 7's district, and there is also the problem of Truck 20's response time as the second due truck to far North Dallas.

The info was in an interview with Fire Chief Eddie Burns, Sr in Firehouse magazine a few months ago.

Also on Bensware.com from back in 2006:

Dallas - City council reviewed the 2006 November bond packet. The Fire department is seeking $53,950,489 for the following fire station additions and improvements.

Replacement of fire stations 6,27,32,37 and 44

Expansion of fire station 10
Adding a truck company to station 10
New fire station at 5400 Keeneland Pkwy / Walton Walker
New Engine, Ladder and Rescue
17 personnel for the new station Fire Station
Land Acquisitions located in the areas of 6700 W Kiest Blvd, 7800 Camp Wisdom Rd and 4300 Mountain Creek Parkway

Engine 33's new quarters are also up, I believe it opened in September 2008.

Will they be moving Truck 7 up there, moving it somewhere else, or just
be adding Truck 10?

In general, where do you learn this info? DFR's stations pages on their
web site stay hopelessly out of date.

I believe it was Engine 10 calling it. I did not look at the CAD page because they made a request for PD thus indicating it was not an incident where PD is normally assigned (MVA, shooting etc). Most likely one of the many "Unconscious Person" calls that turn out to be dead people.

I guess we will miss out on the return trip.
From a NASA Blog:

Space shuttle Atlantis' ferry flight is under way! The modified Boeing 747 Shuttle Carrier Aircraft carrying Atlantis took off from Edwards Air Force Base in California at 11:06 a.m. EDT. The Shuttle Carrier Aircraft is heading to Biggs Army Air Field in El Paso, Texas, and is expected to arrive about 1:10 p.m. EDT. The shuttle and the ferry flight team will stay at Biggs overnight and then continue on tomorrow morning to NASA's Kennedy Space Center.
It looks like it has already arrived at Biggs:

Correct me if I'm wrong, but I think the only reason it landed at the NAS is becasue of weather related issues to the east. Didnt it also make one more stop east of here before it went to Florida?

But I know its rare for it to land at the NAS unless there is some kind of issue.

PRESS RELEASE
June 3, 2009<?xml:namespace prefix = o ns = "urn:schemas-microsoft-com:office:office" />
MEDIA CONTACT:
Amanda Addington, Marketing Director
Phone: (940) 484-1603
Airshow Flies Into Denton on June 20
DENTON ? High-flying airshow action comes to North Texas when the Denton Airshow takes off at the Denton Airport on June 20. The Denton Airport, City of Denton and the Denton Air Fair Committee have teamed up with David Schultz Airshows LLC to present this year?s show. Admission is only $5 for adults and children age 6 and older; children under 6 get in free. Gates open at 10 a.m. and opening ceremonies will begin at 1 p.m.
Headlining the performances will be the Trojan Phlyers Aerobatic Team and the US Navy F/A-18C Hornet West Coast Demonstration Team.
Other performers include Mike ?Spanky? Galloway in his Pitts S2C, the Texas Twisters Formation Team, the Flight of the Phoenix Escadrille Team, and many others. The Flagship Detroit DC-3 will make an appearance, and Longhorn Helicopter will be selling helicopter rides. There will be static aircraft displays, vendors, a children?s play area and diaper changing station, and plenty of food and drinks.
A special attraction this year is Glenn McDuffie, the sailor from the iconic WWII photograph of a sailor kissing a nurse in Times Square on V-J Day in 1945. The iconic image of that kiss, immortalized by the photographer Alfred Eisenstaedt in ?Life? magazine, became the symbol of a joyful nation?s victory. McDuffie, who was featured on ?Good Morning America? in 2007, will be signing copies of the photo during the airshow.
The Denton Airport is located 4 miles west of I-35E in Denton. Traffic flow to the show will be improved this year with the addition of more parking areas and shuttle buses sponsored by Roadrunner Charters running to and from the gates.
Proceeds from the airshow benefit Cumberland Presbyterian Children?s Home in Denton. Sponsorship and volunteer opportunities are still available. For more information, go to http://denton.schultzairshows.com or call (940) 484-1603.
Scanner Frequencies for listening in.

Media folks: You might do a story about bogus tickets being sold for parking lot 15 which isn't open yet. Sounds like someone was selling them on eBay.

OK, seems like they added G1 through G16, similar to the recently added "F1-F16" talkgroups.

Maybe F channels will be for the Ballpark events and G for Cowboys? Then what would they do on dueling events? (Thinking out loud about this).

TGs G1-4, are PD traffic. Last one, G16, 59440 is FD/EMS traffic.

G1 58960 - event command

G2 58992 - talk 1?

G3 59024 - traffic command

G4 59056 - talkaround

G5 59088

G6 59120

G7 59152

G8 58184

G9 59216

G10 59248

G11 59280

G12 59312

G13 59344

G14 59376

G15 59408

G16 59440 EMS/FD

I haven't confirmed G5 through G15.

I haven't been able to scan the stadium's LTR system from Bedford.

Just heard someone go to channel 14: 59376

They are using 59088 for an escort channel, arriving now at the Coach Jerry Shrine!

59344 sounds like First Aid, heard them ordering up more tampons and over the counter meds earlier!!!

Interesting listening, 59440 is very busy with George Straight fans dropping out like flies!

Found another one, tg 57392 is in the public works range, and seems to be related to parking. They mentioned sweeping(as in checking, not using a broom or cleaning) lots and towing cars. Actually, it might be code enforcement, so maybe it is parking violators they are going after tonight. They also talked about a demolition site without any barricades.

30297. Any special plans for Analog TV sign-off?

Yahoo group: dfwscan (2008 — 2009)

Hey to any of the TV station engineers out there....

Are there any plans to do something special for the final sign off of analog TV? Should I dust off the VCR and capture the last Analog TV moments? Or will it be as uneventful as a simple pulling of the plug in the middle of a late night show?

Thanks,

--Chance

> Are there any plans to do something special for the final sign off of analog TV?"

How about bringing back the DFW Airport camera? If Ch 39 can afford to have 5 digital stations, surely WFAA can add one more. :)

On a side note, can we expect more added digital channels other than what have been added already? (I re-scanned last night and found no newbies).

Also, I wonder since all of these powerful analog stations will be powered down, will that have any effect on our scanner reception in general...hmmm.

Big house fire in Plano 1400 block of Amherst.
All units have evacuated because of conditions
and heavy fire. Two bedridden patients were
reported trapped, however, the latest traffic
that I heard was that firefighters could not get
into that bedroom because of conditions.
Hopefully no DOA's on this scene, but it doesn't
look good.

It couldn't get any worse. There are several areas of the public safety spectrum where I just can't hear crap because of the heavy TV bleedover.

Yes, they do. But I think it needs to be a repetitive happening, they dont have the equipment set up at all times on all frequencies so it's hard to find someone with just one isolated occurence. If he keeps doing it though, he will get caught and there will be hell to pay.

Been happening for years. Even if one would get caught another would step in to take its place. Just a minor nuisance to the net as it keeps getting the job done.

Been through the same thing with CB. The only solution we found was to track them down to their casa and pay them a visit -- ie pin through coax, antenna yanked down, etc...

Best one was pulling up in front of the house after spending an hour tracking down a dead key with the TV playing in the background. As we pulled up, we heard a screen door slam and someone say "oh sh*t", followed by dead air. Never had a problem with that one person again.

You'd think the FCC would take more interest in this since their games are interfering with public safety.

I can give you names, AND callsigns if you want... I know who it is. Even the repeater trustee knows who it is and won't do a damn thing about it (makes me furious) It's HIS license after all. But I live/work downtown Dallas... and when storms come, I'm usually stuck working through them. So to load up the DF equipment, drive over to Fort Worth, and document things is just a pain especially when the trustee has this guy's back. But I may just get irate enough to do it - and turn them BOTH in. (after sending certified letter w/ proof to trustee so he can't say he didn't know)

Ask me how I really feel.

I think the guy's name, callsign, and address, and a photo ID should be put out for the general (scanner/radio) public! Whoever he is, he is a real jerk. Has he ever been repotted for this?

I heard him the other night and I've heard him in the past too. He sounds like a drunken jerk wanting attention. I like the way the storm chasers just ignore him but I'd also like to hear of him getting caught too.

30321. Sunday Morning Skip/Ducting From San Antonio

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-14 12:31:09 UTC
From: commscan
Topic: 30321 Message: 30321

Hello All,

I just walked into the radio room this morning and sat down to catch up on some e-mails when I ran across an FD on 154.250 with a PL of 156.7. I heard "? County Fire Alarm" called and then "Hollywood Park FD" talking. After a quick FCC & MSN Maps search, I saw this is Bexar County Fire Alarm. Lots of Bexar County agencies are listed with the frequency too.

It appears there's some pretty decent skip this morning.

30323. Any Texas/Oklahoma Border Listeners?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-14 14:47:23 UTC
From: commscan
Topic: 30323 Message: 30323

Hi Again All,

I've been raking in some new ones with the skip this morning. I confirmed one that I'd asked about here earlier this year. McGregor PD, 158.8125/146.2, is booming in loud and clear.

I also just confirmed (for myself anyways) the PL 173.8 on 154.755 as being used by Marshall County Fire (Oklahoma). I've had this frequency confirmed for many years with Marshall Co SO but I never had their PL tone. When looking at RR.com, it still has Marshall Co SO listed too (and with the 173.8 PL). The FCC site shows only one trunk license on 154.755 for the whole state of Oklahoma and it's not Marshall County.

Do any of the northern DFW listeners or possibly Oklahoma members know if the SO still uses this frequency? It definitely being used now by Marshall County Fire and I'm just wondering if their SO is still on the same frequency too. I seldom hear anything out of Oklahoma anymore. I chalk it up to the trunk systems up there. They probably say the same thing about us down here :-)

Thanks for any additional feedback.

Brian

I've always loved DX'ing and catching new stations. This morning was pretty good too. I kept trying to search between (more or less) 151 MHz and 160 MHz. I never made it past 155 MHz without finding something new to start trying to confirm :)

30326. For Sale: Uniden BCD396T

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-14 18:47:42 UTC
From: Tracey W. Singleton
Topic: 30326 Message: 30326

I don't remember if this is off-topic or not, but before I place it on eBay I am selling my Uniden BCD396T hand-held, and I wanted to make it available to the group. Very gently used, no dings/scratches, and it has only left the house twice.

Includes scanner, AC power supply/charger, stock antenna, manual, programming software and cable. Will throw in scanner headset.

Will program a few cities for you if you ask nicely. (grin)

Must be willing to pick it up or meet me halfway somewhere between Mesquite and Greenville on I-30. I can send pictures to verify condition and mail it if you really want it.

I love this radio, but am selling to buy amateur mobile rig.

$400.00 Flat.

Topic: 30327 Message: 30327

There was a pretty impressive wreck on Dallas Tollway @ Frankford on Friday around midnight. Car was on its side wedged into a toll booth. I forgot to take my camera, but while I was there I did see what appeared to be someone with the media recording it. I never saw what channel he was with and I havent been able to find it on any of the websites. Does anyone know of any pictures of this scene?

Thanks
Andrew

30328. FWPS Radio System users mentioned in council agenda

Several users are mentioned in the June 16th city council agenda, relating to rebanding costs, including BNSF Railroad, US Bureau of Printing and Engraving, FWISD, and UNT Health Science Center. I know BSNF has at least one talkgroup, and UNTHSC has 4. I'm not sure about US B of P&E or FWISD. They may only have access to Tarrant1 or something like that, but if you hear some new talkgroups that sound like they might match, please share the info here.

Happy Scanning,
Ben Saladino

Brian and group -

FWIW .....

I know and can confirm that 800 hasn't gone into
Southern Oklahoma for primary dispatches. I frequently
travel between DFW and the Pauls Valley/Wynnewood
area, and can tell you all the S.O.'s , PD's and FD's up
there are VHF Hi, and the repeaters (although rural)
carry quite a distance. The only digital that I confirmed
was Chickasaw NRA. So far, I have heard nothing state
related. OHP Ardmore supposedly has not made the
transition to 800 yet, and is still on Lo Band. I made
a search of the 800 band, and never found any decent
control channels. In all my trips over the last couple
of months, I have NEVER seen an OHP vehicle.
However, I am waiting with dread to see the Timmay
Command vehicle at Ponders in Ardmore. What a great
way to ruin a fantastic small town meal......

Also, confirmed the FAA RCAG Ardmore site from the
top of Arbuckle Mtn. - very loud and clear - on 132.975.
If you're ever in Turner Falls make sure to tune it in if
you're a aviation buff. That's the High Altitude site.
Arbuckle Mtn is a visual landmark for us scanner and
radio tower buffs as well. It's sprinkled with numerous
towers on top, and can be seen for miles near Hwy 77
and Interstate 35. There are a couple of real pretty
vistas and pull-offs where you can DX for many miles.

Overall, RR data has been right on the money from this area.

Blaine

30332. Super Skip/Ducting Today

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-16 13:24:46 UTC
From: commscan
Topic: 30332 Message: 30332

Hi Group,

There is some excellent long range reception today. It's probably the best I've ran across in years. I'm listening agencies as far south (and probably farther.I just don't know Spanish) as Corpus Christi. Even as I type this message, I'm listening to Liberty County SO in SE Texas and they sound as if they're in my backyard (155.835/PL146.3). Back in the day, when I lived in the Houston area and there were no TRS, I use to hear Liberty Co. fairly regularly. That's what I love about VHF-Hi conventional frequencies. Unlike 800 MHz, and most times the 453/460 MHz frequencies, there is a lot more skip and range these VHF-Hi band frequencies give. And the whole VHF-Hi band range is much more often good for skip because the MUF (maximum useable frequency) usually falls short of the 400 and 800 MHz bands before it all gone.

Just a heads up for anyone interested in long range reception today.

Brian

Another idea as far as ducting goes... turn on your old ANALOG TV, and scan the lower VHF channels (2, 6, 7) - each market has a "nightlight" station on analog - and who knows what cities you may see. We just got a QSL report Friday night from our San Antonio station KCWX (which didn't turn off analog till 11:59:59pm) from some guy in Ohio.

30335. New Lockheed Frequency

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-16 16:13:49 UTC
From: commscan
Topic: 30335 Message: 30335

Hi Group,

This is two firsts in one for me. Lockheed is using 159.885/PL 69.3 for Lockheed Mobile (the white station wagon that runs out to the runway when a test flight is getting ready to fly). I've never heard anyone with the PL 69.3 too.

This frequency is one I've looked for 10+ years. I finally came to the conclusion that Lockheed Mobile just used the same frequency as the aircraft did but that they never really came up and talked.

This frequency is listed with Lockheed but out of Travis County (http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=2983195 <http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=2983195&__newWindow=false> &__newWindow=false). This frequency sounds a lot like the old 149.205 Transient Alert frequency the base use to use. I even programmed 149.205 into another radio to see if they came up at the same time and nothing but 159.885 was carrying traffic. The transient alert frequency, 149.205, has disappeared from use I believe and this is now on the Navy TRS.

The4 audio can be very low at times on this frequency, 159.885, but I think it depends on the radio transmitting.

Navy Tower is also here talking to Lockheed. I may not be 100% correct on my diagnosis of what this frequency is for, but it is one I've never heard, seen mentioned, etc.

If any of you can hear this from any other locations, please reply and let the group know. This does not appear to be an image frequency or anything like that. I'll keep an ear on it to try and see what I can learn.

BTW, the skip/ducting I mentioned earlier this morning has pretty much disappeared fast and is not ongoing anymore.

Brian

I didn't even think of something like that. That's a pretty cool QSL. As luck would have it, until I receive my new smart card from my satellite provider, I'm without any channel excerpt the "Free This Month" Science Channel (and two other that aren't worth watching though). I had to disconnect my outside antenna going to my satellite box in May of last year. I really hope to get it hooked back up soon. I like to have it just for those occasions where the storms knock out satellite reception and also for reception on the weather (and other additional channels) channels such as 4.1, 8.1, 8.2, etc the local stations offer. Thanks for the idea Melissa...

Let me take a wild guess and assume you guys are speaking about the 146.94 repeater?

If so, I don't even participate on this repeater anymore because of this idiocy. I've taken the repeater out of my radio. There's too much crap that gets put over that system by morons who must be mentally retarded with a disregard for Part 97.

Thankfully if D*STAR ever gains momentum it'll be easy to ban callsigns of unruly people.

I just couldn't put up with it.

Ducting (not to be confused with spring/summer sporadic E skip) can be just as good on UHF and 800 MHz as VHF, if not better.

You won't see it on a scanner because scanners have poor sensitivity that gets worse on UHF and 800 MHz, and the average scanner user doesn't have a high gain antenna up above treetop level or low loss hardline.

There are a number of hams that work long distances all the time on 432, 1296, 2304 MHz and 10 GHz mainly using SSB and high gain antennas with a clear view of the horizon.

Another good ducting indicator is weather radar. when you start seeing large AP blobs around the radar site (if you are looking at a web site that doesn't filter it out) you know conditions are good.

Several years ago when I worked at a 2-way shop in Garland, we bought some used radios out of a small dept in Arkansas.

I powered them up and was able to RX their 800 trunking system for several hours one hot summer day.

Of course having an 800 BDA (Bi-Directional Amplifier) with an antenna on the roof about 20 or so feet in the air helped. But that was the first and only time I was able to hear a far away 800 system. I didn't think it was possible until it happened.

Never the less it was still really cool.

Nothing particularly significant here, but I thought it was cool. NRH fire had been working on a hazmat situation for probably half an hour or more, but I wasn't paying too much attention and didn't have any details. Then when they requested mutual aid, I got enough info to go ahead and send it out on IPN. I dispatched it on IPN at 1640. At 1642, the NRHFD dispatcher told the incident commander, "We're getting calls from the media now". I just thought that was pretty cool how fast they acted on my IPN page! Almost feels like being a reporter again!

Remember that media pays for the service so it's interesting to know there was an incident 30 or more minutes old and not being paid attention to before it was paged. At that time of day the desk is buried and it's important to get what is paid for. Thanks for the information.

Glad to hear y'all found it worthy. I try to keep my IPN pages relevant, and not pad my numbers with traffic advisories and junk. Even though it was half an hour old, it certainly sounded like it was a newsworthy situation.

Media apparently showed up pretty quickly after the page, and the fire guys were freaking out on the radio, as if they had never seen news media before. Calling for a PIO. Calling for cops. Talking about having the media "run off". Idiots. If half the effort were put into homeland security that is put into hassling the media in this country, there would have been no 9/11.

30346. Denton Air Show, Sat June 20th. Denton Muncipal Airport

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-18 23:45:13 UTC
From: Bob Tickner
Topic: 30285 Message: 30346

Airshow Flies Into Denton This Saturday June 20th http://denton.schultzairshows.com
Scanner Frequencies for listening in.
Denton Tower 119.95
DentonGround 123.95
Denton Asos 119.325
DTO Unicom 122.95
Air Boss Freq 135.65
Air show Ground 132.95
FBO Business Air 131.22500
On the Denton City Trunking System, talk groups
Denton Fire, Fire 5, patch to Fire 6(Event-A)
Denton Police, PD Event 1
Air Show Committee Event-A
Air Show Parking Event-B
Air Show Practice, Friday afternoon at 2 pm. F-18 to practice at 2:05, others to follow.
See show details at the website or below.
DENTON ? High-flying airshow action comes to North Texas when the Denton Airshow takes off at the Denton Airport on June 20. The Denton Airport, City of Denton and the Denton Air Fair Committee have teamed up with David Schultz Airshows LLC to present this year?s show.
Admission is only $5 for adults and children age 6 and older; children under 6 get in free. Gates open at 10 a.m. and opening ceremonies will begin at 1 p.m. <?xml:namespace prefix = o ns = "urn:schemas-microsoft-com:office:office" />
Headlining the performances will be the Trojan Phlyers Aerobatic Team and the US Navy F/A-18C Hornet West Coast Demonstration Team.
Other performers include Mike ?Spanky? Galloway in his Pitts S2C, the Texas Twisters Formation Team, the Flight of the Phoenix Escadrille Team, and many others. The Flagship Detroit DC-3 will make an appearance, and Longhorn Helicopter will be selling helicopter rides. There will be static aircraft displays, vendors, a children?s play area and diaper changing station, and plenty of food and drinks.
A special attraction this year is Glenn McDuffie, the sailor from the iconic WWII photograph of a sailor kissing a nurse in Times Square on V-J Day in 1945. The iconic image of that kiss, immortalized by the photographer Alfred Eisenstaedt in ?Life? magazine, became the symbol of a joyful nation?s victory. McDuffie, who was featured on ?Good Morning America? in 2007, will be signing copies of the photo during the airshow.
The Denton Airport is located 4 miles west of I-35E in Denton. Follow Airport Road,FM1515 signs. Traffic flow to the show will be improved this year with the addition of more parking areas and shuttle buses sponsored by Roadrunner Charters running to and from the gates.
Proceeds from the airshow benefit Cumberland Presbyterian Children?s Home in Denton.
Sponsorship and volunteer opportunities are still available. For more information, go to http://denton.schultzairshows.com or call (940) 484-1603.

30347. Amateur Radio action next weekend

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-19 02:20:45 UTC
From: David Johnson
Topic: 30347 Message: 30347

Courtesy invitation:

Scanner frequencies to be monitoring for local ham radio traffic:
147.040MHz, 146.940MHz, 147.160MHz, 146.720MHz, 146.880MHz, many others.

Jun 27 1pm to Jun 28 1pm, full 24 hours of non-stop on-the-air action by Ham Radio teams across the DFW Metroplex. If you like to know how things work, if you like to serve your community while pursuing an awesome technical hobby, then check out these Ham Radio teams, there's bound to be one near you.

Use the link below and plug in your zip code where it asks for your location, and you'll see!

No charge, this is all for public display and visitors are encouraged to check it out.

http://www.arrl.org/contests/announcements/fd/locator.php

These teams will be looking forward to showing you what they do to provide emergency and disaster relief communications, and they only get good at it by practicing, so your participation by just showing up for a look helps them get better.

There are more than 60 amateur radio clubs around this area, and several are going on air Saturday Jun 27. In fact this is a nationwide event, so there will be many thousands of stations participating.

The Tri-County Amateur Radio Club (Tarrant, Parker, Wise counties) has a website at http://www.wc5c.org

Hope you get the chance to see this!

David J.
Azle Texas

Hi Jim & List,

I was over in Lake Worth when I was hearing it. I don't think it is a simplex frequency but I'm not sure. I had a stock rubber ducky antenna on the radio and it was coming in clear on both 159.8850 and 159.8925. The reason I decided .885 was the right frequency was due to the Lockheed listing on that frequency on the FCC site. The FCC site messed up and has it in "Travis" County and at the Grant Street address (Lockheed's Fort Worth HQ). I guess it was a typo that slipped through.

I am curious as to how far out this signal can be heard. There was no breaking up or choppy transmissions so I'm wondering if it may be a repeater. I always forget the correct FCC text indicating if it's a repeater or not... :)

Hi Tom & Group,

I've never really tried monitoring the ham bands up in the 1296 or 2304 MHz range Tom. Is there any local use up there in the DFW area?

I wish I had a real radio (like the new Fort Worth XTS-5000) to monitor some trunk systems on. I know the real radios I've seen and heard blow scanners out of the water all together.

I'm not sure if anyone's been searching the Fort Worth PS1 TRS lately, but there are some new changes (talkgroups) that have popped up in recent weeks. So far, it's the Zero Tolerance TGs. They're patched to new 22000's numbered TGs now. It might be a good time to start using the "Search" feature on our scanners because there will be a lot more changing sooner or later.

I never got into microwaves or had any equipment for higher than 450 MHz FM.

There are a lot of microwave ham bands but they aren't widely used.
<http://www.arrl.org/FandES/field/regulations/bandplan.html>

There is a microwave ham club in N Texas. <http://www.ntms.org> They have a list of beacons here <http://www.ntms.org/Beacons.php> I assume the beacons are in CW so you would need a SSB/CW receiver to hear them. I don't know how current the list is.

There are several 1.2 GHz FM ham repeaters listed in the metroplex.

1291.00 Richland Hills
1292.00 Mesquite
1292.20 Richardson
1292.30 Dallas
1292.60 Dallas
1292.70 Rockwall D-STAR
1292.78 Fort Worth
1292.90 Fort Worth
1292.98 Venus
1293.00 Dallas D-STAR
1293.40 Denton D-STAR

1292.78 in Fort Worth used to be linked to the owner's other repeaters (443.975, 224.78, 29.66) and I could hear it on my old PRO-95 in Hurst. I don't know if it still is and I don't know how active any of the others are, or if they really exist.

Both (commercial radios and scanners) have their advantages
and disadvantages. For simple variety and usefulness of the
spectrum, I'd still stick with scanners. Commercial radios are
fantastic if you only want to listen to one thing. That is why
their sensitivity and performance is so good. They are catered
to a specific band and frequencies, and are optimized. But the
fact that you may be limited to let's say, 16 talkgroups per system,
doesn't seem enough. Of course if you got the wallet size, go
for it!!

I have been looking for a 800mhz Motorola Trunking Radio, but I talked to a guy at Hamcom and he told me that there was no way to program any type of radio to Fort Worth's Trunking System unless I was a firefighter, police officer, etc. Does anybody know if there is any truth to this?

Topic: 30332 Message: 30355

That is a respectable answer that most people trying to sell a used Motorola radio won't tell you. And from all practical and "legal" stand points it is the truth.

First problem: Finding someone to program it for. No reputable shop is going to do it. If you do it yourself you need to find a bootleg copy of the programming software a RIB box and an interface cable. And for the older radios (MTX8000/MTS2000) a 486 computer with DOS.

Second problem: Site key. Each trunked radio system has a key that is required to program a radio. Only the people authorized to program radios for a system should be in possession of the key. Of course there are ways around it, check out BatLabs website.

Third problem: Making sure the radio is in a receive only mode. There really is no sure way to make it receive only except for maybe a hardware modification. Yes, with the "LAB" version of RSS, you can disable the PTT button, but there is no way to get the "LAB" version legally.

Fourth problem: Finding an ID to program the radio with. Every radio programed on a Trunked Radio system is issued an ID. Do you "steal" or copy and exisintg id? Make one up? Theoretically the site admins can disable the radio by sending a kill command. I don't think Fort Worth does this, but it is known to happen.

I could probably add 5, 6, 7 and so own, but I think you get the point that it is not a simple thing to do.

Hi Blaine & Group,

I agree with a lot of what you said Blaine. There is no replacing all of the great extras a scanner provides and a real radio doesn't. However, in the few "real radios" (more commercial than PS types) I have, I can use them like scanners in many ways. They scan, I can lockout/unlock channels of interest, and they even have "banks/systems" (or zones in real radio terms) that can be used in different ways. The sensitivity and selectivity is really super on them too. Mine are all older style radios and none are Motorola XTSxxxx (or even LTXxxxx...I think these would be commercial grade). I use my scanners all of the time. I use one of the real radios when I want to listen to local stuff (conventional or LTR) or someone like DPD when I'm mobile in Fort Worth. I program mine not to transmit to avoid any accidents, but they definitely out perform scanners as far as getting a farther out, weaker signal. And the audio is about 10 times louder that a scanner's audio too. If I had to choose between a scanner and a real radio, I'd pick the scanner any day just because of what they can do (especially today). If you'd asked me 10 - 15 years ago, you'd have probably gotten a different answer. Still, I'd have to have my scanners for milair, searching, capturing PL tones, etc, etc...

They both have their pluses and minuses in the long run :)

> out of the water all together.

Both (commercial radios and scanners) have their advantages and disadvantages. For simple variety and usefulness of the spectrum, I'd still stick with scanners. Commercial radios are fantastic if you only want to listen to one thing. That is why their sensitivity and performance is so good. They are catered to a specific band and frequencies, and are optimized. But the

fact that you may be limited to let's say, 16 talkgroups per system,
doesn't seem enough. Of course if you got the wallet size, go
for it!!

Hi Again All,

Can't a person program a Motorola radio for (for instance) the FW Public Safety TRS just to listen without worry of being shut down? Is the System Key a requirement to program in for listening purposes only? I didn't think it was illegal to program one unless of course you broke some law to do it (I'm not sure if there are any) or you do something foolish like program it to transmit and you do so.

The radio ID won't affiliate to a TRS unless it's set to transmit, right?

I may be completely wrong, and if that's the case, I sold my few real radios yesterday :) Seriously, I have no 800 MHZ radios other than scanners but I didn't think it was illegal to program a real radio to just listen.

If anyone has a for sure answer I'd be interested...

Hi Brian
Question 1- No. Any radio programmed onto a Moto Trunk system can be zapped whether it ever transmits or not. It simply listens to the control channel and follows instructions.
Question 2 - Yes, a system key is required for programming onto the system. There is no setting in the software that designates a Moto trunk radio for "receive only".
Question 3 - Wrong. The system can poll radios and they will respond. Radios with unknown IDs or affiliations on talkgroups where they don't belong (FD radio on PD CID) are instantly targeted. The only guaranteed way to prevent a radio from transmitting is to remove the actual transmitter finals.

And here's an interesting article that Jared and others should read first before programming a radio onto a trunk system:
http://www.waltontribune.com/story.lasso?ewcd=cd44ce9e77a457e5
Note that authorities even agreed that these guys didn't have "any malicious intent but [their actions] severely compromised the security of Walton County's radio system".

Happy scanning
Jonathan

This doesn't have much to do with 800 MHz but here is a little story about real radios vs. scanners.

This last fire season when Montague County had the big wildfires I was deployed with my FD to Montague to assist in the firefighting efforts. Being a local Metroplex FD we didn't have VHF radios to communicate with the local agencies in Montague and communications between our task force were done on one of the Regional Mutual Aid 800 channels (old NPSPAC). I brought my BCD396T with me on the deployment since I already had all of the Texas Forest Service and Montague County VHF frequencies programmed in. Long story short we got more solid information from listening to the scanner than we had on our own radios because it took so long to relay information to us from VHF to the command post and then from the command post to our Chief and then out to us on our channel.

One instance where the scanner really saved the day was the second day we were deployed. We were in the St. Jo area on a fire and we were holding a fireline along a roadway where the forest service had started backburning. We were basically patrolling the road and putting out fires as they got close to the road. Our mission was to make sure it didn't cross the road. A TXFS spotter aircraft was overhead along with several helicopters and we could hear them on the scanner. A few times we were alerted to water drops because of the scanner. Towards dark we thought we had the roadway held but the spotter aircraft started talking about a new spot fire that had jumped the road. This was a long road and several agencies were patrolling. He began describing the vehicles that were closest to the spot fire and I realized that he was talking about us! We took off in the direction of the spot fire and we could hear him saying "Yes, keep going South and curve back to the right...you're getting to the area now." We found the fire and we were able to extinguish it. A couple of minutes later we got the message on our 800 radio but we had aleady been there. Without the scanner that spot fire could have grown even further and would have been more difficult for us to stop.

Quick question that I can not seem to answer. A friend has been given an older scanner that does not trunk. He lives in Little Elm and wants to monitor LEPD. I have told him according to radio reference he can not. But is there a way to monitor like a "dispatch" channel? And if so, what would the freq be? I am not familiar with this system. Thanks in advance.

From: Brent Willcox
Topic: 30364 Message: 30365

Little Elm PD and FD are on the Denton County trunked system, which is a Moto Type 2 trunked system
and not the Teletouch system.

The PD are on talkgroup 592 (Patrol 2) and FD is on 8528 (Little Elm Fire Ops 10)

I would suggest that your friend get a trunking scanner to reduce his/her frustration with monitoring the system.

You don't need digital (yet anyway) to monitor the system, so a basic Pro 164, GRE PSR 300,or a BCT246T will work well.
but he/she might as well get the digital capable scanner to be future proof.

It's funny that he seems to think the opposite of what the reality is. He seems to think that, since it is not a trunking scanner, he could still listen to just a dispatch channel. The reality is that, since he does not have a trunking scanner, he must either listen to everything or nothing, and cannot single out any channel. And that doesn't mean everything in Little Elm. That means everything in Denton County! He'll put up with that for less than a day.

Denton County is one of the very few counties anywhere where a conventional scanner is next to useless. Most counties still have some fire traffic on conventional channels at least. Forget it in DenCo.

Denco still has VHF dispatch for pagers and
some departments on 155.835 (pl 118.8), so
all is not lost....YET....:)

I would still HIGHLY recommend a digital
capable trunking scanner. Pricey?...yes....
future prepared? .....definitely....

Blaine,

Not sure what your asking but that is the Denton Co. Fire Marshal's office off of Teasley Lane.

They have one heck of an operation out there as I have taken several police and fire classes out there.

This is their website: http://dentoncounty.com/dept/main.asp?Dept=71

Sorry if that did not answer your question...

Yes, I was aware of that. That is also the location of
the county EOC. And yes, they have a VERY IMPRESSIVE
operation there. The main problem though, is that
even with all that technology, the building is basically
a huge storage shed (like an old aircraft hangar). There
are no hardened underground facilities at all (or even
above ground facilities for that matter). The building and
operations would NEVER stand a direct hit from a tornado.
If a tornado hit it, it would take out the two mobile command
vehicles too. Not a good thing. Also, if god forbid, the tower
adjacent would ever topple it would take out a big chunk of
amateur and emergency communications needed in a disaster.
Hopefully, none of those things ever happen, or it truly would
be a disaster. Thankfully, there is county dispatch, everyone
could go portable and generator, and there are other towers
for public safety and amateur.

Blaine

30376. A Little OT (But Not Completely)

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-22 20:50:48 UTC
From: commscan
Topic: 30376 Message: 30376

I□ve been noticing the ATSC abbreviation when looking at TVs lately. I wasn□t really sure what it referred to, and in another sense, still am not completely sure. Here□s a small clip from Wikipedia.com on ATSC:

ATSC is a set of standards developed by the Advanced Television Systems Committee for digital television transmission that replaced the analog NTSC television system[1] on June 12, 2009 in the United States[2][3] and will replace NTSC by August 31, 2011 in Canada[4] and December 31, 2021 in Mexico.

The high definition television standards defined by the ATSC produce wide screen 16:9 images up to 1920×1080 pixels in size □ more than six times the display resolution of the earlier standard. However, many different image sizes are also supported, so that up to six standard-definition "subchannels" can be broadcast on a single 6 MHz TV channel.

Here□s what I□m wondering. I know the PAL (European) format is 25 frames per second (fps), the NTSC (American format) is 29.97 fps, and there is a PC format that is 30 fps. Now all PCs I□ve ever tried watching PAL, NTSC, or any other format on always play the DVDs I□ve used. However, my DVD player in the living room or any other room will only play the American NTSC format. This is normal.

I□ve converted plenty of DVDs from PAL to NTSC and from NTSC to Pal for friends in England througho9ut the years. But what is the deal with ATSC? Does anyone know if this will be different frames per second rating or am I even thinking clearly in understanding what these formats are all about? Is the NTSC format going away?

And BTW, to keep this thread on topic a little, it looks like we□re going to have to receive Mexican TV analog skip from now on. They still have 12 years to comply with the digital mandate it looks like wow!

Unless anyone finds this thread of interest and is curious about ATSC too, I□d appreciate any feedback be e-mailed to me so we don□t have to be told it□s off topic :-)

Thanks in advance

Brian

Blaine et al,

The new licenses are for a VHF repeater at the Denco EOC plus some portable channels for simplex use.

The Emergency Ops folks want it in place for interoperability/back channel use normally, and to give some backup capability if the 800 system gets overloaded or dies.

There's no repeater installed for that yet, but plug that FB2 frequency into your radios as it eventually will come up as the repeater output once the repeater is in place.

Brent

I'm monitoring Arlington EMS and Fire and have heard nothing. Weird.

There were two shootings in Arlington about an hour ago. Maybe it's for someone already in the hospital. Although, even then they dispatch FD for LZ command. Hmmm...

Hmmm, strange.

It was on the PHI 159.9675 freq.

I coulda' sworn they said for an officer involved
accident - responding to Arlington...but maybe
not....maybe it WAS related to the earlier incidents,
I don't know...

Just a heads up North Richland Hills PD has a new SWAT armored veh. Its a Ford Super Duty chassis decked out, it is very nice.

I bet that thing weighs a ton, the doors are very heavy, takes a bit of strength to open and close them.

Outfitted with some neat stuff, I bet they are glad to get the upgrade even though they don't have to use it. They will also use it for mutual aid for the usual nearby cities.

found on fox 4 website:

ARLINGTON, Texas - A motorcycle rider was killed on Monday in a crash that sent him plummeting from an overpass onto Interstate 20.

The incident happened around 2 p.m. when 41-year-old Douglas Trimm of Arlington wrecked his bike on the Highway 360 overpass and was thrown in to the westbound lanes of I-20 below, police said.

A CareFlite helicopter transported him from the scene. He later died at a hospital.

The crash forced the closing of I-20 westbound and officials diverted traffic from the freeway

Is it just me, or are scanning conditions horrible today? Most of the conventional systems I uaually get loud and clear are extremely weak and scratchy. Lancaster, Hill County, Johnson County, all hardly readable. 800 reception seems a little better than usual though.

Along that train of thought, can anyone recommend a good, reasonable tower erector? I'm about tired of this and am ready to get it up there about 60 feet.

You sure about that? I dont think that data is entirely accurate. We should put in for a grant from the government to study this. Shouldnt cost more than $7.6 Billion to determine whether turning a scanner on will improve reception. Obama will sign it in a heart beat...the way he spends money you'd think being elected President is the same as being cast as the lead in Brewster's Millions.

Yes, but it's take another $13.2 billion to solve why the scanners are
turned on, but not working, only to learn that must also be plugged
in. :-)

It has been a while since I have been scanning (a hobby I have definitely missed). I am now listening again and have noticed some changes in Dallas PD...

1) Using alpha-numerics with their beat/element numbers
2) Channel 7 seems to no longer be 'Traffic'

I am sure someone can help.
Here is what I have from the past:

1-Cental
2-Northeast
3-Southeast
4-Northwest
5-Southwest
6-Northcentral
7-Traffic
8-Tact
9-Open (events)
10-Open / Car to Car
11-?
12-?

Thanks in advance,

~ D

Correct. Programming a two-way radio versus programming a scanner is a whole other ballgame. As good as it may sound or as neat as it would be to do, I would just leave it alone.

LOL. Honestly, I never noticed I had 'em all off in that pic.
I'll have to revamp the pic too, apparently....:)

Actually, the current usage is;

1- Central
2- NE
3- SE
4- NW
5- SW
6- N Central
7- S Central
8- SWAT
9- Accident Investigators (A&Is), DWI, Traffic
10- Citywide
11- CID, PES, etc.

12-SPCL Events/Fair Park

From: Blaine Brooks
Topic: 30415 Message: 30415

Got this from a good friend in the northeast:
****

There will be a FTX [Field Training Exercise] this
weekend [Fri-Sun] over in College Park with 406-420
P25 activity for HHS, NDMS and possibly other Federal
Assetts.

Different teams from East to West coasts converging.

It might be worth passing along the info to your
Favorite Federal Searchers/Monitors to see what they
can Find.../ Search.... / CloseCall ?

Not sure what "College Park" this is....on Google
Maps I've only been able to find one in Mesquite,
and another in southeast Dallas. Any help?

Ben,

In
<http://www.acronymattic.com/NOR.html>http://www.acronymattic.com/NOR.html
there are some 76 possible meanings of N.O.R. The most likely
meanings are Notice of R----- or Name of Resident. It all depends on
context so maybe you can find something appropriate at the link above.

Toby

In Fort Worth slang, it means No Offense Report -- ie they responded to the call but did not have to file a report pertaining to it.

You may also hear RTF -- which means Report To Follow. The offense was such that a report needed to be written, but the next call is more urgent than the report, so it will be submitted at a later time during the shift.

30428. BCD996 and 396 Trunking Problems

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-06-29 00:15:23 UTC
From: rob.davis@armynursecorps.com
Topic: 30428 Message: 30428

I've been experiencing a problem reliably receiving trunking on my BCD996s and BCD396 for a good while now, and I'm curious if anyone else notices this problem, and what they may have done about it.

In a nutshell, what is happening is that I am missing entire conversations on trunking systems, both analog and digital. The scanner is happily scanning away, but simply never picks up the conversation or stops to monitor it. I'll hear people checking enroute to or on scene of a fire that I never heard them dispatched to.

For a long time, I just wrote it off to it being me not listening closely enough, but a couple weeks ago it became clear that this was not the case. I was sitting in my car with the scanners going, and another scannist walked over to my car with a handheld (non-Uniden) scanner. He was listening to Arlington FD responding to a major accident just down the road from us. Nothing was coming across my scanner, and my scanner was dedicated to ONLY the AFD system, so it could not have been a scan rate problem. We listened to several AFD transmissions that never came across my 996.

Unfortunately, I have a feeling that this is happening to a lot of people, but they simply don't know it. After all, you don't know what you don't hear. And most people are listening to so many channels and systems at once that missing something doesn't surprise them. But I usually have each scanner dedicated to only one or two systems at a time, so that isn't a factor with my problem.

Any thoughts or other such reports?

Rob

Go through all your freqs manually. You'll probably find one got locked out. Happened to me a few weeks ago, scanner still tracked trunking systems but I missed several transmissions. And on days that the control channel happened to be assigned to that frequency, it said it was scanning but never picked up anything. It's a good bet this is the problem.

Oops, forgot about the alternative: You might have skipped a freq when you programmed the system in, in which case all of them will be unlocked in the scanner. So you should also compare the freqs programmed in to what's shown on RR.coms database.

>
> In a nutshell, what is happening is that I am missing entire conversations on trunking systems, both analog and digital. The scanner is happily scanning away, but simply never picks up the conversation or stops to monitor it. I'll hear people checking enroute to or on scene of a fire that I never heard them dispatched to.
>
> For a long time, I just wrote it off to it being me not listening closely enough, but a couple weeks ago it became clear that this was not the case. I was sitting in my car with the scanners going, and another scannist walked over to my car with a handheld (non-Uniden) scanner. He was listening to Arlington FD responding to a major accident just down the road from us. Nothing was coming across my scanner, and my scanner was dedicated to ONLY the AFD system, so it could not have been a scan rate problem. We listened to several AFD transmissions that never came across my 996.
>
> Unfortunately, I have a feeling that this is happening to a lot of people, but they simply don't know it. After all, you don't know what you don't hear. And most people are listening to so many channels and systems at once that missing something doesn't surprise them. But I usually have each scanner dedicated to only one or two systems at a time, so that isn't a factor with my problem.

Andrew and Paul B,

Thanks for your suggestions! I double checked my programming just now. I have all four control channels that are listed at RR.com programmed in for Arlington, so that doesn't seem to be the problem. I don't lose them for hours at a time, just random conversations and transmissions here and there.

Is there any reason I would need anything other than the control channels programmed in?

Rob

You say you got the four control channels, what about the others? The only thing I can think of is one of the voice channels is missing or locked out. Since the transmissions are assigned to freqs at random in a trunk system, missing one would cause you to miss transmissions at random. I dont see any other explanation for it. Unless there is some phenomenon around your house that just randomly shuts out radio waves from the area for a few seconds at a time.

Sorry cant be of more help. Maybe someone else has some ideas?

Wait a sec...I just reread your email and your last question caught my eye:

"Is there any reason I would need anything other than the control
channels programmed in?"

Please dont tell me you're trying to track this system with only 4 freqs programmed in. There's 12 total that all need to be programmed, any one of them could be assigned a voice transmission at random. The control channels rotate out between the four freqs assigned for that purpose.

You dodn't have to have all the channels, just the control channels.

One issue I could see happening is interference from another user on the same voice frequency. We've had a lot of ducting over the last few weeks and with 75 mile seperation on re-use of frequencies this is possible. Highland Park has had issues in the past from the Waco system's control channel.

Terry

Well, at this point I am open to any possible explanation, but I don't believe you are correct on this one. Do you use either of these scanners? Because it is my understanding that all current generation Uniden scanners use Control Channel Only TrunkTracking.

http://wiki.radioreference.com/index.php/Control_Channel_Only

"CCO programming is recommended for use in selected RS scanners starting with the Pro-93 in bands where Motorola trunking is supported and this includes all P25 trunking bands for the Pro-96/2096 and the GRE PSR-500/600 scanners. It enables the user to trunk a system by programming in only those channels that are utilized as a control channel, instead of having to utilize memory to program the entire system."

Yes sir. And it happens on the house antenna, the car antennae, and on the rubber duck too. Best I can tell, I miss nothing on conventionals, and I monitor a lot of conventional channels.

Again, when it happened to me while someone was standing right next to my car with a non-Uniden handheld scanner that was NOT missing the transmissions I was missing, it became clear that it was a problem specific to all of my 396/996s.

You do not need to program any frequencies other than the control channels. The scanner calculates the voice channel frequencies based on the info on the control channel. I listen to Arlington a lot, and haven't noticed the symptoms being described.

Rob, I didn't mean simply are you using the right antenna. Have you opened the case to check whether the in-case connection is still intact? If the case has been dropped at some time in the past, the vibrations of daily transportation and use may have finally weakened the antenna's internal connection to the point where it's no longer sensitive to the 800 Mhz frequencies of the trunk systems. With conventional systems, the longer wavelength of the transmission may make a deteriorated signal less apparent. Perhaps even there, the antenna is not providing reception as strong as it used to, but the problem has manifested itself more quickly on the trunking frequencies.

Maybe my analysis (such as it is) is wrong, but it's probably worth opening the case to check.

Rob,

Where are you monitoring Arlington from? I get pretty spotty reception of the Arlington system in Bedford.

Also, did you double check to make sure Control Channel only is enabled for the system? Menu, Program System, choose Arlington, Edit Sys Option, scroll to Set C-Ch Only, and make sure it's enabled.

Is it only the Arlington system that you have trouble with?

Good luck,

Ben

Hmmm... sure enough, it was not enabled for Arlington! Although I have not checked all the other systems yet, so far it appears that Arlington was the only one with that not enabled. And, as far as I know, Arlington is indeed the only system I was having problems with.

I think that may do it! Thanks, Ben! I'll let you know if that takes care of it.

The clock on the wall says we are way overdue for a group get-together, don't you think? Let's kick the Summer off with one, and then try again at the end of the Summer.

I'm thinking sometime soon after the July 4th holiday. If we can come to a consensus on the best particular night of the week, that'd be a good start, and we can work from there to find a venue and solid date.

Rather than trash the listserver with this, if you'll e-mail me any day, time, and date preferences, as well as days, times, and dates you absolutely cannot do, I'll start trying to work this thing out.

Let's get the party started!

Rob

Everything is pretty much a set price..... $50.00 repair, unless its really jacked up then yes, you would be charged a little extra.

Because it goes via Memphis, silly. :-)

I bought a computer from Dell that shipped from a few miles away. I
think I decided I paid nearly $30 per mile.

Let me add my two cents to all the postings about Uniden repairs.

It sounds like that some of you are already aware that there is
a Uniden shop in the DFW area.

Specifically, it is located at 4700 Amon Carter Blvd
                                        Fort Worth, TX   76155
                                        817-858-3300
This is in the industrial district directly south of DFW
airport.

A year or so ago, I purchased a Uniden hand held from Frey's.
Prior to that I had been a "a very loyal" Shack customer
because it was easy to take a repair to the local Shack
store and one week later, the repaired item was back at that
same Shack store.

I told that story to the floor salesman at Frey's and he told
about the Uniden shop above.

On my first visit I went to the Uniden main entrance on
Amon Carter Blvd. When I tried the front door, it was locked!!
I noticed a squawk box installed near the front door and pushed
the button on the box. In a couple of seconds, a receptionist
sounding voice ask if she could help me. I told her that I had
a Uniden scanner that needed repair. She gave me instructions
to go down to the end of the building and go through the gate
and enter a door at the top of the step on my left. I followed
those instructions and a security guard let me in and told
me that the receptionist notified him that I was on my way back.
The security guard, in turned, call a scanner tech and he
can up to the security desk. He looked over the scanner, did
some paper work and a gave me a copy and said it would
be ready in three to five days.

I went my way and in four days went back and paid with a
Am Ex card and I was happy camper.

Sorry, some of you are having a bad experience in getting
your repairs done. Good luck on getting them repaired!

Hope some or all of the above will help!

This evening about the time all this was going down, I was on my
way to Sanger on State Highway 455. As I crossed the Ray Roberts dam,
two local cops (I guess Sanger) passed me at a high rate of speed
without lights and siren going toward Pilot Point (Hwy 377).

A couple of miles pass the dam, I met two Texas DPS units
at a high rate of speed using their lights and siren headed toward
Pilot Point.

Just assumed they were going over to Pilot Point to get in the parade!

3976 Cedar Bayou Dr

660 told the Rescue it will be a signal 27.

Maybe the truck & battalion chief because forcible entry was going to be necessary. They usually don't dispatch a BC for forcible entry, but occasionally one is sent if there are neighbors/relatives on scene requesting a supervisor (pure guess here as to why in this case).

Yep, thats it. Still havent heard anything about what actually happened. There was a guess that someone got stuck between the toilet and the tub, but even an engine company should be able to handle that alone if they carry a water shut off key and an axe to smash the toilet.

30468. Missing Fire Departments

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-07-03 10:47:10 UTC
From: rob.davis@armynursecorps.com
Topic: 30468 Message: 30468

Hey Guys,

There are (were?) three volunteer fire departments that used to be in Tarrant County that are missing in action. Two of them are still listed at RadioReference, and I'm wondering if anyone has a definitive answer regarding their status:

Dido - I found their fire station a few weeks ago, and the place looks abandoned, with one old broke pick-up sitting out front.

North Tarrant County - Heard a rumour that they disbanded some years back. Wouldn't be surprised. They had "issues".

Spillway - Went looking for their station the same day as Dido, and never could find it. It's either been torn down, or else I forgot where it was to begin with.

I'd appreciate any insight anyone might have on these organisations status.

Thanks!

Rob

Thanks, Ben! I should have known to check your site first!

You were spot-on with both the Dido and Spillway stations. That is indeed the Dido station. I had only been to the Spillway station once before, back in 1991, when one of their vollies was killed. The lot is barren now, totally bulldozed. You can't tell there was ever a structure there, so I thought maybe I had the location wrong.

What I dont get is why they dont just create a state wide PD Channel? One frequency programmed into every PD radio to talk to units in the immediate area. A Houston cop, for example, could switch to that channel during a chase and talk to any other agency whether it stayed down south or made it to Amarillo. They dont need a big ass fancy system to do that. Just one frequency that is set aside for the entire state.

In most of these instances you dont need to talk to someone five miles away, just around the block. If it is necessary to talk to someone from the other agency farther away, just talk to their guy around the corner and he can relay it for you.

But no...we gotta have the multi-million dollar radio system that covers an entire region that no one knows how to operate because new radios have to be installed and will spend about 80% of its time down for repairs in less than 2 years.

The constables, SO, and DPS still do. They're just to stupid to use it.

From the article:

"When you are in a fast-paced, moving environment, sometimes seconds count," said Mike Simpson, the state's communications interoperability coordinator. "Officers are out there in a dangerous environment." And it's a problem, he said, if they can see each other "but can't talk to each other."

"Instead of relying on a hodgepodge of proprietary equipment that uses different frequency bands, Simpson said, state officials are encouraging law enforcement agencies to refit a digital system known as Project 25 (P25) by 2015 that makes interoperability – or talking to each other on the radio – easier."

How does this idiot still have a job?

Rob

The do already

Texas Law 1 on VHF
UCALL on UHF
8CALL on 800 (Formally NPSPAC1)

The problem is

DCSO/DPS is on VHF
DPD on UHF
Garland/Richardson on 800

for just the chase in question.

The other problem is training. In most cases they get about 5
minutes training on how to use the radio. So most do not even know
what is in their radios. Plus the interop channels are so seldom
used they forget that they are simplex and keep waiting for the tone
so that they can talk.

Rick

Don't know how official this site is:
http://www.ticostat.com/TICOResidentialDocuments.action
If you look at the changes for 2009, you will see that Dido and North Tarrant County were deleted.
Some other area VFDs I noticed deleted were:
Ellis Co RPFD No 1 (in Ellis Co) might have just changed to Ellis Co ESD No 3
Mayhill Cooper Creek (in Denton Co)
Willow Park VFD (in Parker Co) think they just took the VFD part out of their name

Found this when looking up Spillway:
fireman128
March 13, 2008
Spillway Fire Department. Closed its doors about 5 years ago, and no longer exists. If you live between The City of Azle and Lake Worth You need to contact the Tarrant County Fire Dispatch center to find out who your fire department will be. the phone number is 817-232-9800

We have had 155.370/154.950 for over 40 years that I know of. Probably longer than that.

Texas (and the whole country for that matter) has interoperability channels out the @$.
<http://www.radioreference.com/apps/db/?aid=899>
<http://wiki.radioreference.com/index.php/Federal/Non-Federal_Interoperability>

The Problem is lack of training, not reprogramming radios, not putting extra radios in vehicles, and not implementing existing plans, which anybody can download at:
<http://tsiec.region49.org>
<http://www.npstc.org/channelNaming.jsp>

YES!!!...how I do remember the old intercity. It was like you could talk to anyone in the world with it. And I agree exactly, it was not broke so no need to mess with it.

Being in Law Enforcement communications for the past 27yrs both as a Communications Officer and now Patrol Lt, I am not impressed very much with today's technology. Yes the idea was nice when first started but we are encountering more problems with our 800 trunk system as time passes.

Stay safe all and Happy 4th to all...
Randy

The problem is the average Police officer and Firefighter are not interested in all of the bells and whistles - they just want to push a button and talk... The more complicated things become, the more resistance will come from them... The thing I hear the most is - "your talkin over my head" when we talk about the radio system stuff... Those of us in the amateur radio hobby or scanner hobby see things a bit differently...

Please ignore the attached SPAM - I have no control over it.

These stories crack me up. Intercity worked for many, many years even with cities on different bands, they still has an intercity radio. How much could a VHF mobile radio cost? Put one in every car and dispatch position in the State.

Second, Austin's $100 million is so great that the "DEA can talk to the garbage man". This is a crock. All of the radios are not programmed with all of the talk groups. Even with everybody on the same physical system, they still do not talk to each other. Austin PD doesn't even talk directly with Austin FD. Williamson County FD/EMS is now encrypted. Nobody can talk to them without calling Williamson FD Dispatch and asking them go to an InterOp channel. (Williamson Co is on the same system as Austin/Travis County). DPS is the only agency I hear moving around from SO channel to SO channel on the A/TC system, LCRA, and the VHF systems - they have more than one radio.

What is needed is a tactical solution not an infrastructure solution. A guy in a car or truck needs the ability to pick up the mic and push the button to talk to another guy in a car or truck regardless of the agency they work for. These InterOp channels need to function much like CBs. Intercity was like that. If a tornado hit Podunk, Texas anyone from anywhere in the State could go there and communicate on Intercity. As a matter of fact, the only place where InterOp is a problem is in the metropolitan areas. Out in the counties, where everybody is still VHF (more than 90% of the State), these guys can and do talk to each other all the time, mostly on Intercity and even on each other dispatch channels. You would only need to return the InterCity radios to the metro areas and Texas would have full Interoperability. Having all the other channels would be great but are useless if nobody can talk to each other in the first place.

Let's keep in mind here that the thrust in communications upgrades and interoperability since 9-11 has been on "emergency" communications, not routine communications. Chases are not considered an "emergency" but perhaps they should be. We are much better off today, however, than we were 8 years ago in terms of being able to communicate. Intercity is gone folks. It was great when our area was a hap-hazard mesh of urban sprawl and everyone was on hi-band, but the harsh reality is that our population has exploded to a point where one interoperability channel on a single band is no longer practicable. Competing radio companies have made things more complicated for us. If the decisions on what kind of system to buy were made by those actually using the systems and not budget people with expense accounts sitting in air conditioned offices, interoperability would be a piece of cake. But now we have LTR, Passport LTR, EDACS, EDACS Open Sky, MOTO Trunked and MOTO P25 Trunked, TETRA, conventional VHF, UHF and 800. To help alleviate this problem to a certain extent we now have the VTAC, UTAC and 8TAC channels. They are in most agencies' radios even though most users may not even know how to tune to them. Seldom do you ever hear any traffic on them. The issue I believe is that someone with some stroke for our region needs to take the initiative and lay down some law and designate some of these channels as "high priority traffic" or "chase" channels. Then the word needs to be put out, either through some kind of communications summit, mass e-mail or formal letter. Then there has to be on-going training on how to use these channels when high priority situations arise. The reality is that even when agencies have designated interoperability channels to communicate with other agencies, they either have new personnel in the dispatch center who don't know how to work the equipment, have never been told how to use it, or have the volume on the radio turned down. Irving chased one into Dallas last week, flattened all her tired then I guess it must have been getting off time because they simply turned off there lights, hit the exit and disappeared. Never could raise them on NPSPAC5, 8TAC94D, NLEC5 (866.0125, or whatever it's called this week)! Several media photogs and DSO stuck with it till the end. It's a crying shame when you have to call the agency who initiated the chase on the phone to tell them you cleaned their fish for them!!!

Well, to be fair, "Regional" fire dispatch in SW Dallas County is still on a conventional system, and they can't talk to each other either. Their system sounds like cheap CB radios. Proof that a good engineer can screw up even the simplest system. Just more support for the KISS principle.

Myles, what a great resource! Thank you for posting that!

I notice that Mid-North VFD is shown as deleted there. But I hear Mid-North getting dispatched almost every day. I wonder if they too just changed their officially listed name.

Bill, you have the right FD. Spillway was indeed there at the end of the dam, just past the Tarrant Water District office. I don't remember much about it, but they had a volunteer killed while responding to a fire back in 1991, and I was there for the funeral. Seems like I remember it being bigger than the empty lot that now sits there.

It was only a 2 bay station with a small meeting room. They use to
park the brush truck on the side. The state finally ran them out of
business around 2000.

Thanks, Greg. Does Eagle Mountain cover that area now? That's a pretty good ride for them.

Spillway was around for a pretty good while. At least 20+ years, to my recollection.

North Tarrant County is now covered by Keller and Fort Worth, right? Is there a master coverage map somewhere online that shows the rural fire districts' territories?

Rob and the group

Azle FD and Eagle Mountain split Spillway area, Azle
makes run into the county all the time.

Hope that helps

Michael Stuart - AA5ST
Azle, Texas - Parker County

Hey Rob and everyone,

Eagle Mountain and Azle split the area that Spillway covered. Dido had their contract pulled by the county as it was hard for them to get a crew to respond, so Eagle Mountain took that area. Eagle Mountain would pretty much run all the calls in the area as it was, anytime an EMS call would go out, E21 would go ahead and respond with M21.The area that North Tarrant covered was taken over by Haslet Fire, Roanoke continued and still continues to cover the EMS for the area. The area up there is getting pretty small with the annexing Fort Worth is doing, im sure in the future all of that will be taken by Fort Worth. Hope that sheds some light,

Jason

Very helpful, Jason. Thank you very much to everyone who has responded!

I've been around Tarrant County since the late 60's, and to the best of my knowledge, we haven't had that many departments disappear like this in the modern era. I seem to remember that Webb, between Arlington and Mansfield, had a VFD up until the mid to late 70s, when Arlington annexed south of the newly constructed I-20. That's the only other one I can think of though. I suppose the former Watsonville (far SW Arlington, where I live now) probably had one at some point before the early 70s. Does anyone else remember any dearly departed fire departments from the area?

It sounds horrible. Half of the transmissions on that system are either the dispatcher or the field crew telling the other that their transmission is too noisy to understand, and asking them to repeat. Surprisingly, the dispatchers sound as horrible as the fire trucks. Every time they key the mic, it sounds like they are in an 18-wheeler, running 80 mph with the windows open. The system volume is potted up way too hot, as is the base transmitter itself. I have honestly never heard a conventional system that sounded so bad. Although, the Johnson County fire repeater sounded that way for about a week a few months back. I figure the same service tech must have been sent down there to set it up, but someone came behind him to fix it a week later. Regional has just lived with it that way for a year now though. And instead of doing anything about it, they just complain and live with it. Weird.

Not sure if this is newsworthy, but it sounds like there's a house being moved in Fort Worth on the west side. Last I heard was around Clover, Montgomery, and Dexter. I haven't looked at a map, but I believe that's over by the musuems.
A couple of FWPD units are on 22288.

Looks like 854.0125 has been added, but not enabled on the NE Tarrant system. For those without control channel trunk tracking, you might want to program it in too, so you don't miss something once it's enabled.

30511. Hillsboro FD

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-07-14 00:22:36 UTC
From: Jeffrey A. Harwell
Topic: 30511 Message: 30511

Hillsboro had a major fire today in the 400 block of E. Elm Street with multiple Hill County departments responding on mutual aid. I heard all the county departments responding on the county channel (154.295 cl00.0) but never heard anything on the city channel (154.325 c100.0). Just wondering if anyone was aware of a new Hillsboro FD frequency?
Thanks,
Jeff Harwell

Yeah, I know it's a stretch off topic, but today they are not using team radios to shake things up, and I've been watching and wondering what types of radios they normally use and what frequencies, what range, (simplex only I assume)? Any other cycling fans or anyone else seen anything on the radio technology used in the Tour de France? Do fans scan the bike race like they do NASCAR here? Are scanners even legal in France?

FWPD has been issuing new radios lately. There are some new talkgroups that officers will have now. I'm sure this is all part of preparing to reband, but I don't think the actual rebanding will happen real soon.

I just heard 22576 active and someone asked if "you on TMS1?". I believe there are TMS1, TMS2, TMS3, and TMS4 talkgroups.

FD radios have not yet been replaced although a lot of them are some variant of the XTS seriies now. Capt. at the FAO says they wont start on the FD radios until fall 09.

  We may not see the actual shift to new freqs unitl late in the year (at the earliest).

Please ignore the attached SPAM - I have no control over it.

Subject: Scanner Noise

In posting this, I am reminded of those Russian jamming stations of long ago, a person could hear on any sw radio, jamming American radio transmissions. The sound was like that of 1000 buzz saws all running at once.

Lately, here in S.W. Abilene, we are being plauged with a noise not too different from those old jammers from the '50's, that moves slowly up and down the high band, almost every single day. It keeps me jumping locking out first one channel than another, as it wreaks havoc drifting slowly up and down the band. I sometimes wonder if an enemy country would be capable of jamming emergency frequencies with a satellite transmitter. Nothing would surprise me.

It wasn't on yesterday, allowing us to use the radio. Today, it is back as ear ripping irritating and menacing as ever. I won't babysit or nurse a scanner locking and unlocking channels as this demonic noise rips a path of interference up and down the high band. The radio is turned off! :mad:

30537. RE: [dfwscan] Re: All Quiet in Richardson!

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-07-20 16:55:54 UTC
From: commscan
Topic: 30530 Message: 30537

I must've overlooked or not received the original posting on this topic.
What's the story? Has Richardson just dropped down 15 MHz or are they
implementing a new system which cannot be monitored? And if it is a new
system (or has become encrypted), are there any details on what they're
using? Thanks...

Brian

Sorry Ya'll...
A little premature on my part...did'nt finish my homework...
Guess for now all I need to do is readjust my freqs due to their
rebanding...
Apparantly that IS in the workings for them soon though...supposedly they
will be just like DFW and un-scannable. ..that Will suck!

They just did the rebanding, they are not digital. A buddy of mine that does radio work for several cities in the area was doing the work & told me they would be completely finished with programming all the radios in Richardson by this week. I asked him if Richardson was going digital and he said there wasnt anything on his company's schedule for it any time soon. So they might be going digital, but havent gone so far as to put a work order in yet. Something like that is planned several months in advance so I dont think it will happen anytime soon (certainly not this year).

Greg, what software are you using? Any of the Uniden format *.usd files will work, & will import into BCTool or FreeScan. I'm in Dallas, so some of the smaller Tarrant County departments (the ones not on the trunked systems) are out of range for me. Since I can't verify them, I don't try to keep all of them current in my Tarrant County conventional system file.

From: Michael Stuart
Topic: 30547 Message: 30548

Hello Terry & the group

Silvercreek VFD covers that area, someone correct me if
I'm wrong. They are using P25 Trunk System, all the FD's
in Parker County are on it. The old VHF frequency is for
dispatch only.

Hope this helps

Michael Stuart - AA5ST
Azle, Texas - Parker County

From: rob.davis@armynursecorps.com
Topic: 30547 Message: 30549

While we're talking Parker County, does anyone have a list of the fire department radio call/station number assignments? They no longer tone out the departments by name, now instead using station numbers, so it's become difficult to keep up with who is who.

Rob

30550. Tarrant County Fire Station Numbers

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-07-26 03:00:19 UTC
From: rob.davis@armynursecorps.com
Topic: 30550 Message: 30550

Since I'm asking for Parker (and Johnson) County fire station assignment numbers, I may as well offer something in return.

This is a list of all the Tarrant County fire department radio/station numbers, as dispatched by Tarrant County Fire Alarm:

Lake Worth 10
Mansfield 11
River Oaks 13
Saginaw 14
Newark 16
White Settlement 18
Everman 19
Hurst 20
Eagle Mountain 21
Forest Hill 23
Colleyville 24
Sansom Park 25
Rendon 26
Haslet 28
Cresson 30
Blue Mound 32
Briar 33
Pelican Bay 34
Edgecliff Village 35
Westworth Village 41
TC Fire Support 45
Azle 52
BenBrook 53
Crowley 54
Kennedale 59
Roanoke 60
Burleson 71
Aledo A34

I'm not sure if this is totally accurate.
It is what I have compiled from listening.

Adell-Whitt 45
Aledo 34
Azle 52
Brock-Dennis 39
Central 55
Cool-Garner 43
Horseshoe Bend 53
Greenwood 41
Hudson Oaks 36
La Junta 51
Millsap 42
Mountain River 57
Peaster 46
Poolville 47
Reno 49
Silver Creek 54
Springtown ?
Tin Top 37
Willow Park 35

To add to Tom's list.

For Parker County

Parker County Fire Unit IDs

3300 County Fire Marshal's Office/Emergency Management
3400 Aledo (East)
3500 Willow Park (East)
3600 Hudson Oaks (East)
3700 Tin Top (South)
3900 Brock/Dennis (Southwest)
4100 Greenwood (West)
4200 Millsap (Southwest)
4300 Cool/Garner (West)
4500 Adel/Whitt (Northwest)
4600 Peaster (North/Northwest)
4700 Poolville (North)
4800 Springtown (Northeast)
4900 Reno (Northeast)
5100 LaJunta (Northeast)
5300 Horseshoe Bend (South)
5400 Silver Creek (Northeast)
5500 Central Community (North)
5700 Mountain River (Southwest)

For Wise County, if anyone wants it.
1100 Alvord FD
1200 Boyd FD
1300 Bridgeport FD
1400 Chico FD
1500 Decatur FD
1600 Newark FD
1700 Rhome FD
1800 Paradise FD
1900 Crafton FD
2100 Slidell / Greenwood FD
2200 Boonsville FD
2300 Lake Bridgeport FD
2400 Runaway Bay FD
2500 Cottondale FD
2600 East Wise Fire Rescue
2700 Sid Richardson Scout Ranch FD
2800 Salt Creek FD
2900 Sand Flat FD

Hope that helps

Excellent, Tom and Michael! This is extremely helpful information! If one of our Johnson County friends can get this info for us too, that would be awesome.

Ellis County, Navarro County, and Bosque County use names, and not numbers, so they're not a problem.

Hill County and Hood County have started using numbers almost exclusively though, so I'd like to get theirs too, if anyone has access.

Note the Dallas LG system is included with rebanded frequencies.

I think we'll see Irving rebanded soon too. I've been hearing lots of radio service chatter on their system.

Thanks, Chris!

Anyone know what became of Nolan's new fire station they opened about 10 years ago? I remember when they first formed in the late 80s, running out of a farm implement shop.

And where is Blue Water Oaks located?

Nolan's station is still standing in the same location. (FM 4 and CR 1124)

Not sure what if anything it is being used for. They shut down
do to low call volume. Their never has been a helluva lot of calls
down in that area. Their fire district is now split between
Godley VFD and Bono FD.

Blue Water Oaks VFD is located at 295 Chambers Dr. in a small
community on the SW side of Alvarado Lake called Blue Water Oaks.
They are another VFD that doesn't get a lot of calls. But what
keeps them in business is that being there in BWO their response
time would be much faster than say Alvarado FD. It's almost 12
miles to Alvarado, combine that with the fact that BWO is quite
remote. You'll see what I mean when you pull it up on a map.

Chris

30570. Lockheed F-35 Ops

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-07-28 16:58:01 UTC
From: commscan
Topic: 30570 Message: 30570

I saw on NBC 5 yesterday that Lockheed is rolling out (whatever that means) their F-35 today. I'm not sure if they're going to actually fly it, but it's coming out. This is the 5th Generation Stealth Fighter Lightning II according to NBC 5 and there are only two currently made.

Anyways, the ops are on 123.175 now. This is a new frequency to me that I heard Lockheed using a few months back. It might make for some interesting listening.

From: commscan
Topic: 30571 Message: 30571

I cannot remember if I mentioned this here or not. I don't recall how many months ago I came across this, but NASFW has been using 121.675 as their Ground VHF frequency lately. It may have been when they had the last airshow (I didn't get to attend) when I first found this frequency. If memory serves me right, it was being used as the Air Boss frequency then. I think I posted a message on the frequency here on the list back then?

I really seldom listen to the VHF side of the Tower and Ground channels so I forgot about this one. I haven't checked to see if the 126.4 VHF Ground frequency that has been/was used for years is still good or not. And Airnav.com doesn't show this new frequency yet; they still show 126.4. 121.675 is a simulcast with 254.325 too

Good catch Brian. I have heard commercial airlines calling Ft. Worth Center recently on 126.4 so I guess they changed frequencies because it was conflicting in the area. When I am near the base I have had VHF ground locked out anyway because I get interference and so I just listen to the UHF side. I'll try the new VHF and maybe the interference will go away as well! Thanks!

Brandon

I too remember experiencing some interference on the (probably old now) VHF Ground 126.4 frequency. I'm wondering if the base might have had the same problem and that's why they switched. They didn't change the Tower frequency, just the Ground one :)

Thanks for the info on what you've heard on 126.4 lately Brandon.

Okay guys, here's the deal:

Chili's
924 Copeland Road
Arlington, Texas
6pm

It's pretty much at the corner of Interstate 30 and Collins St. It's right next door to the old Ken's Wing House (now closed) that we had the last two get-togethers at. We've got the patio reserved for us. Yes, I know there is a Ranger game that night, but it shouldn't be bad traffic, knock wood.

Bring your appetite. Bring your radios. Bring your laptops. Bring your porn. See you there!

Rob

LOL@15 minutes

I've had mine for fifteen months, and I still haven't figured it out.

30579. OT: Contest Help Needed

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-07-31 21:27:56 UTC
From: David W. Carroll
Topic: 30579 Message: 30579

Hi fellow list members.

I am hoping you won't mind this off-topic post. I have been a member of this list for 11 years and this is my first OT post. Hopefully you won't mind.

I helped my kids put together a video for a contest being held by the Yogi Bear Jellystone Park Campground in celebration of their 40th anniversay.

The grand prize is $10,000 (us) and we would like to win. (my kids need shoes!)

WE NEED VOTES!

Please visit the following link and vote for our video.

http://jellystonefun.com/videos?id=101

THANKS for your support!

David Carroll

Tech stuff...

We shot the video with the Panasonic HMC-150, put together the basic edit in iMovie (so we could use their scrapbook theme), then we brought it into Final Cut Pro 7 to adjust things, add sound, etc.

The final project came out to 144MB, but the contest required a file no larger than 20MB. Yikes!

The new YouTube converter in Compressor was AMAZING! I was able to get the file down to 19MB and it looked awesome.

Then, the contest folks converted it to flash and made it look like crap!

If you'd like to see the HD version of the clip, it is here: http://vimeo.com/5782354

30590. RE: [dfwscan] DPD Unit Identification

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-08-03 05:02:19 UTC
From: tvsjr
Topic: 30585 Message: 30590

Well, that's not very nice. Lee posted the original question - he didn't suggest you Google anything.

And, yes, sometimes Google returns outdated information. Sometimes. In this case, the first return is a FUSION/MOSAIC bulletin. the second is a lengthy Dallas News article specifically regarding the FUSION Center which was written May 2009. Do you consider this outdated?

I thought I was being pretty helpful, personally.

Signed,

Not Lee

While we are on this subject, what is this FUSION I keep hearing on calls? A few weeks ago when someone stole $20K in a robbery on RL Thornton & fled in a taxi there were two or three units all asking to make sure fusion was notified. Ive heard them a few more times but dont recall the specifics of the incident.

Im sorry for losing my temper and going on a rant. It just drives me insane when people give me or anyone else the run around. Im the type of person that will make every attempt to personally answer any questions or problems people have, if I dont know it then I go with them to find out. I realize that not everyone has that passion for helping people and sometimes I get pissed off at what I think is laziness whether or not the person was actually genuinly trying to help.

So again, Im sorry Lee, tvsjr, BT and anyone else that I might have offended. Please forgive me.

Thanks
Andrew

From: terry@tvssr.com
Topic: 30585 Message: 30597

Lee, those units are not listed on an early official list I have. However I believe they are deployment. Those are what use to be officers assigned to various patrol divisions but work covert.

Recently the chief decided to move those guys (or most of them) back into uniform. For what I get out of talking to them they are still working more of a special assignment type detail targeting high crime areas etc. At times they still go covert but only when there's one issue to concentrate on.

Once again, that's what I think those numbers are. I monitor so much while working my ears really only perk up for folks like homicide.

Pardon my ignorance but which Dallas trunked system are you referring to?
I'd like to add it to my list of scanned systems. I just have the
conventional DPD frequencies entered in my PSR-500.

Thanks.

Jay was referring to this system:
http://www.radioreference.com/apps/db/?sid=18
<http://www.radioreference.com/apps/db/?sid=18>

It's listed on RadioReference as 'Dallas City Local Government'

And it is used for:

".....all of the City of Dallas City Services and miscellaneous
support departments.
The Dallas Police Department also uses this system for detectives"

Yes, this is the system. This my favorite to listen too.

Still hearing North East Detectives on Talk group ID # 22656 this
morning. Been on this ID since yesterday. I have not heard them on
9072 since yesterdays post.

Should I send the info to Radio Reference?

30607. I bought a Uniden BC246T and need help!

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-08-05 03:12:27 UTC
From: Ronnie
Topic: 30607 Message: 30607

I bought a Uniden BC246T because my old Bearcat 220XLT quit working. Needless to say, I am a bit overwhelmed! I feel like a lost dog in tall grass just trying to do even basic scanning much less following 800-band trunked stuff.

I live in Flower Mound and am a full-time firefighter/paramedic here in the DFW Metroplex. I want to scan all of the fire departments here in the DFW Metroplex that the BC246 will let me as well as a few FDs around the country when I travel. I'd also like to scan some commercial and military aviation stuff.

Does anyone close to Flower Mound have the technical/technological savvy to program this scanner for me? I am trying to wade through the owners manual but it is very intimidating to say the least!

Any help will be greatly appreciated!

Thanks,

Ronnie

Hi Ronnie

The only fire departments in the immediate metro area that you would not be able to monitor with your 246 are Grand Prairie, Mansfield, & those in Parker County. All of these are digital; the 246 is an analog scanner. Farther down the road, some of the others may go digital, but that likely will be several years, by the time a new system is designed, put out for bid, equipment purchased & the system built.

As far as the manual goes, try the "Easier to Read" manual for the 246. Here's the link:
http://marksscanners.com/246/246.shtml

While you can certainly program that scanner by hand, I highly recommend using computer software instead.
Did you buy the scanner new? or acquire a gently used unit?
Did it come with the pc interface cable?

If you have the cable, then you'll be able to load programming using software. The cable uses the serial port on your pc. If you have a newer desktop, pr a laptop, that does not have a serial port (also sometimes referred to as a COM port), then you can get an adapter that plugs into a free USB port & converts it to a serial port.
I'm using one of them on my laptop:
http://www.monoprice.com/products/product.asp?c_id=103&cp_id=10311&cs_id=1031104&p_id=2276&seq=1&format=2

I have a 246, and can create you a file for whatever systems/channels you want locally (I have files for all of the local systems already). That would get you started. However, if you check out the DFW Metro area on RadioReference.com with any regularity, you'll see there are always changes/updates being made. Some weeks more than others, but occasionally changes that may affect what matters to you. So, by downloading a program such as FreeScan, you can make those changes as they occur, and download the updates to your scanner.

Add Cedar Hill, De Soto, and Duncanville to that list. They finally moved fire over to the MPT system. Dispatch voice still simulcasts on 155.925, but no traffic from the units can be heard there. Of course you can still scan the MPT system. You just can't track a specific channel.

Well the followed someone just west of Hwy 75. That is Dallas PD Channel 6. So they were on Dallas Conventional Channels 2, 6 and 10 during that deal. It was kind of crazy listening. Good reason to have more than one scanner with you. Anyway, The good news is they caught the suspects.

There are many different FUSION centers. Most every major center has a FUSION center, the regional area governments. most of them have a FUSION center, the State of Texas has it's FUSION center in Austin, and other states have their own FUSION centers as well. Day before yesterday, for example, we received a 'teletype' from the State of Washington's FUSION center.

At 12:18 p.m., IPN sent out the following dispatch:
>"DFW| Ellis County (Palmer)| Major Accident| 155.580| FM 878 At
>Ebeznar|FD O/S 2 VEH MVA 1 R/O with entrapment request medevac
>M/A:Richardson| DFW205| 12:18"

Isn't Richardson a bit of a far stretch for Ellis County to get M/A
from? What's a more likely source?

I got a good chuckle out of that one myself. I suspect whoever dispatched it does the same thing I do. I fill out a dispatch ticket as the info is received, then hold it until it is confirmed. If it isn't dispatch worthy, then I type over it later to start a new dispatch ticket. A couple of times, I forgot to change the city and did the same thing, so now I have learned to always just refresh the window to clear the screen before starting a new ticket, in order to prevent this from happening again.

I was just surprised to see someone other than me dispatching Ellis County.

Hi Geoff

You're apparently looking at this system:
http://www.radioreference.com/apps/db/?sid=3833

That's not Little Elm PD/FD, but instead is a business LTR, owned/operated by Teletouch, that has the tower site in Little Elm.

Little Elm FD is on the Denton County TRS system:
http://www.radioreference.com/apps/db/?sid=23

Look at talkgroup 8528, Ch 10 under the county fire talkgroups. There's where you'll find Little Elm's FD.

While Little Elm PD is not specifically listed, they may be dispatched by the county on talkgroup 528, "Small PD Dispatch" (also labeled as "Patrol 2) under the Denton County Sheriff/Constable talkgroups heading. I'll defer to one of the Denton County area members if that's incorrect, as I don't listen to that system all the time. It's pretty scratchy from my home in Dallas.

They probably have their own chopper, but contract out to someone for the use, maintenance, etc. I personally have never seen the FBI aircraft used here in DFW. However, I have seen one of the DEA helicopters used here in our area. One was based at Love Field Signature Air hangar a few years ago, but I had heard that they transferred over to Alliance (can't confirm that). It was a grayish blue Aerospatiale. Had a big FLIR system for the observer in the back seat, and Motorola Spectra (I'm assuming UHF band) radios. A very nice chopper. Talked with one of the agents one morning as we both were getting coffee when I was filling in on WBAP doing traffic. Nice guy.

From my experience in fed monitoring, DEA rules the roost as far as aerial surveillance. Rarely do I hear FBI or BICE/CBP up in our area.

From: Blaine Brooks
Topic: 30628 Message: 30628

Did a little searching on the FAA N-number site.

DOJ has SEVERAL aircraft at Alliance of the helo variety. I concentrated my search on Bell 412EP's and Eurocopter. DOJ has 4 Bell 412EP's, 5 Eurocopter AS350's, and 4 Eurocopter BO105's. DEA has 2 Eurocopter AS350's. The one I saw at the Love Field Signature Air hangar that day was 246RF. Very nice helo.

So to answer the original poster's question, the DOJ has a crapload of aircraft apparently at their disposal at Alliance. And that's just of the "rotor" variety.

30629. Benbrook PD

Yahoo group: dfwscan (2008 — 2009)

From: jared4301
Topic: 30629 Message: 30629

Does anybody have any idea what the frequency for Benbrook PD Channel 2?
453.450 is their primary channel, but when there are large incidents like a bank hold-up alarm, or if officers are searching a structure, the dispatcher instructs units to move to Ch. 2. RadioReference lists it as 453.150, but I have never heard anything on that frequency. Any ideas?

Thanks.

30630. Collin Co Sheriff Radio ID's

460.45 PL 151.4 is FD Ch. 2 and 453.150 PL 107.2 is (or at least has been) PD Ch. 2. I haven't paid much attention to Benbrook lately though. I was looking at this FCC link for Benbrook frequencies and noticed one listing for 154.040. I'm not sure what that frequency is for but it looks like it carries voice I believe. I doubt they'd be using 154.04 for PD Ch. 2, but who knows?

(you may have to cut & paste into browser???)

http://fjallfoss.fcc.gov/General_Menu_Reports/license_search_out.cfm?service_select=%25&soundex_select=Benbrook&state_select=TX&zip_select=&frn_select=&begin_grant_date=&end_grant_date=&begin_expiration_date=&end_expiration_date=&limit_select=4&sortstring=%2C+lic_name%2C+file_num

The only other thing I can think of is trying is to turn off (or search for a new) the 107.2 PL tone if you are using it and see if you catch them on 453.15 then.

If I remember right, there's a taxi/airport/? service also on 453.15 and maybe Benbrook has gone to a new frequency for Ch. 2...

I live in Benbrook and I can confirm that 453.150 PL 107.2 is indeed the PD Channel 2 repeater; you just have to be patient as it does not get used often. I have dilgently listened to 154.040 for several years now and have yet to hear any voice traffic on it from Benbrook. The officers carry UHF portables and the cars have both UHF and VHF radios in them. There are only UHF yagi's at the police station, but there is a VHF antenna on the communications tower at the main fire station. I'm guessing in addition to the statewide VHF channels that 154.040 may be in the plan for emergencies if all the UHF repeaters were down.

From: rob.davis@armynursecorps.com
Topic: 30599 Message: 30635

I know we have a few IPN dispatchers here at DFWSCAN. I'd like to know more about who everyone is and where they are located and monitoring. I'm piecing together a rough "coverage map" of the area.

If you are an IPN dispatcher, please shoot me an e-mail just letting me know. And a few of us hang out on AIM to coordinate coverage when we are actively monitoring. Feel free to contact me there, screen name: DFW048

Thanks!

Rob

I *think* 154.040 was used for public works of some kind. I don't show it confirmed on my list but I did show it now having a tone on it.
But then my info is years old.
The antenna appears to be on the fire station at 525 or 528 Mercedes.

The FCC goofed again. If there is anything for Saturday, it will be spliced in.

I submitted it last week.

I guess 22656 is permanent. I haven't heard them on 9072 since I posted
hearing the change. A couple of weeks at least.

30647. New Ellis County Frequency

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-08-24 13:10:49 UTC
From: rob.davis@armynursecorps.com
Topic: 30647 Message: 30647

I have recently begun hearing Ellis County fire traffic on 155.115. Mostly, it is a transponder-like recorded voice reply to fire tone-outs. For instance, a tone will be sent on the main fire channels (154.265/155.58), and a second later, a recorded voice replies on 155.115 with "Milford has received the page." Then the dispatcher voices the run information on the main channel.

This morning, I am also hearing Ellis County SO dispatch talking to animal control officers on this same frequency.

155.115 is not listed to Ellis County on RR.com. Does anyone know what the deal is and when it started?

Rob

Ah! So at least it is official, and not ghosting. I stumbled upon this totally by accident, as I have the channel programmed for monitoring Van Zandt County fire.

While we're talking about curious Ellis County traffic, I am also hearing a simulcast of Waxahachie Fire Department's trunk channel on 154.01. It is the same simulcast that is listed and normally heard on 154.385. I can't imagine them simulcasting the same thing on two high-band channels, especially one they don't even show to be licensed for, so I suspect it may be ghosting. Anyone else heard this?

It doesn't show up on RR's Ellis Co page only because nobody ever submitted it.
http://www.radioreference.com/apps/db/?cs=KNHA824
The license was last updated in 2003. The FCC database is broke right now so I can't see when it was first issued but judging from the callsign I would say early 80's.

Thanks for the reply Mike. I am considering moving to this area, and was just wondering if it is even worth to program in any of the RMA for this area or not. Seems pointless if it is not being used. Also, SO is licensed to NPSPAC. Have you heard any traffic on the old or new ones?

I'm looking at the Melissa area, so I'm primarily concerned with SO traffic, or I guess DPS.

I've heard sporadic traffic on all the channels from time to time. I'd still probably program them in just in case the county system ever goes down. I've heard what I believe to be the Collin County Jr. College, McKinney campus fire academy using some of the channels for training purposes. I usually end up locking them out though because it becomes a pain to listen to after a while.

Thanks again Mike. One more question - Does McKinney, Collin Co Shf, or the Plano TRS utilize Private Call for any of its public safety units?

From: Blaine Brooks
Topic: 30658 Message: 30658

For those that like listening to such things, it's sounds as though Allen FD has been doing some very extensive training today, along with surrounding depts. I am assuming that it has been training, as I have yet to see any IPN pages. McKinney has been working with them, along with Plano & Frisco. Search/Command on Ops 4, Sector/Division on Ops 5.

Blaine

30659. FW and Parker county stuff...

Parker county site 1 is in site trunking today (not connected to the other 3 sites).

FW seems to be getting a lot closer to rebanding, There is a deadline for South COP patrollers to turn in old radios by the end of this month. Some of them are getting XTS2500 radios.

Please ignore the attached SPAM - I have no control over it.

30661. Re: [dfwscan] New Ellis County Frequency

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-08-27 23:06:07 UTC
From: Myles Barkman
Topic: 30647 Message: 30661

I've had 155.115 listed as an Ellis Co SO (possibly channel 7) for years.
PL was 107.2 Hz and input was 153.800 MHz. Don't know if all that is still
the same.
155.835 was the main SO channel, then there was 159.450, channel 2.
155.115 wasn't used all that much that I remember. Animal control might
have been the most you heard on it back then.
Guess they found a more efficient use of that part of the spectrum now.

30662. Fs: Pro-106 / this deal for dfwscan members only

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-08-28 20:22:10 UTC
From: Gregg Alemy
Topic: 30662 Message: 30662

I have a pro-106 digital trunking scanner scanner for sale, only one month old, I have the box, manuals, receipt.

I will throw in the following:
RS 800mhz antenna
Diamond RH77CA antenna
ac and dc adapter
fm transmitter for listening in the car thru your stereo, it is sweet!!

375.00

This is a heck of a deal
either email me back or call me 817-933-0312
Thanks

Interesting new law this Sep 1st. Some teeth for local law enforcement instead of just the FCC for this type of crime. The problem will be, as always, finding the fools. But a nice law to have.

Gary
W5ETA

INTERFERENCE WITH PUBLIC SAFETY RADIO FREQUENCY (SB 1273)
Creates a new offense if a person intentionally interrupts, disrupts, impedes, jams, or otherwise interferes with a radio frequency used by a law enforcement agency, fire department, or emergency medical services provider. The offense is a Class A misdemeanor. The offense is a state jail felony if the actor committed the offense with the intent to facilitate the commission of another offense or interfere with the ability of a law enforcement agency, a fire department, or an emergency medical services provider to respond to an emergency.
READ THE BILL:

Interesting... I think there is an issue with jurisdiction on this one..
The FCC regulates the airwaves, not the states... Is this just a bill
or is it a law?

From: Gary Moseley
Topic: 30673 Message: 30676

And it is not about regulating the airwaves as much as the intentional interference with public safety, so there is no jurisdictional problems.

This will be a good law to have in the back pocket of law enforcement. Obviously, the occasions that someone is actually charged with this offense will be very small. But for those times that all the stars are aligned perfectly and we (we cause I are one) can actually find someone who is interfering with public safety radio traffic to the point that it meets the criteria...it will be useful.

Do the Skywarn frequencies fall into this when there is storm spotter activation? From previous messages I would say this is a more important issue.

I'm thinking the root of this law is probably directed towards drug gangs and large-scale criminal groups more than the individual who gets his thrills being a pain.

Interesting new law this Sep 1st. Some teeth for local law enforcement instead of just the FCC for this type of crime. The problem will be, as always, finding the fools. But a nice law to have.

INTERFERENCE WITH PUBLIC SAFETY RADIO FREQUENCY (SB 1273)
Creates a new offense if a person intentionally interrupts, disrupts, impedes, jams, or otherwise interferes with a radio frequency used by a law enforcement agency, fire department, or emergency medical services provider. The offense is a Class A misdemeanor. The offense is a state jail felony if the actor committed the offense with the intent to facilitate the commission of another offense or interfere with the ability of a law enforcement agency, a fire department, or an emergency medical services provider to respond to an emergency.

I would tend to agree with Bill on this one. Guess it's up to the FCC and ham club, but still there have been some real jackasses that have gotten on the SKYWARN nets lately and wreaked some havoc during severe weather, to the point the NWS and storm spotters in the path of tornadoes, hail, winds, etc. were not able to get out critical info. THAT is certainly a VERY SERIOUS issue, and a matter of PUBLIC SAFETY, IMO.

Hi fellow list members. I promise this will be the last post on this topic.

Refresher: I am trying to help my daughters win the Yogi Bear Jellystone Park 40th Anniversary video contest and we need as many votes as we can get.

There are over 60 videos entered and we need to be in the Top 5 in order to make it to The Finals.

Would you please take a moment and vote again for our entry? The link is:

http://jellystonefun.com/videos?id=101

(Note: Upon voting you will need to confirm via an email they will send you. You can vote with every email address you have.)

The Grand Prize is $10,000 and we only have 1 week left to get out vote total up.

Getting votes has been A LOT harder than I ever imagined. Your help would be very much appreciated

THANKS for your support!

David Carroll

I would hope that we can get the frequencies used by Skywarn and the NWS covered.
I know in collin county once a net goes up every jackass starts to key there radio and jam the repeater.

30681. Dallas PD North East Detectives back on 9072

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-01 21:40:22 UTC
From: Jay Pinkerton
Topic: 30681 Message: 30681

This week the Dallas North East Detectives for Channel 2 are back on talk group ID 9072. They were on 22656 last week. I heard them talk a little about it and sounds like they can use either one. One is supposed to be a backup. Not sure which is primary and which is secondary. Will monitor to see which one they stay on. You should program both into your scanner just in case. In their conversation they led me to believe other detective channels would have two talk group ID's but I haven't heard the others. Nor do I listen to those as much as I do North East. Others out there will have to try and catch them. Put your scanner on ID Search late at night and record your findings.

Green glass? Maybe Heineken bottles are falling off someone's balcony?

Probably has something to do with releasing it to the media and someone forgot to delete it before passing it on.

Hey guys,

For some time now I've hosted the Denton County Fire Departments live audio feed. As of today I have added a second feed for just the Lewisville Fire Department. Both feeds may be accessed via the Radio Reference website here: http://www.radioreference.com/apps/audio/?ctid=2583

They also work on your iPhone and other mobile devices. If you have the Emergency Radio App for iPhone the Denton County feed is there however the Lewisville one has not been added yet. It should be available with the next update. Enjoy!

The blackberry app that runs the same feeds is called bbscanner

http://www.bbscanner.com/

I have it on mine and it works well.

I also provide a feed for Dallas Fire / Rescue at

http://www.radioreference.com/apps/audio/?feedId=1420

Hopefully people traveling for the Labor Day Weekend will be safe. If you are out of the area and want to monitor Dallas, or as Brandon mentioned the Denton County or Lewisville stuff there are great apps for the BlackBerry and iPhone.

Sounds like currently their Trunked system towers are linked by fiber optic lines and they are going to replace them with a microwave link system to the main controller. Microwave must be more reliable??? And like our esteemed mayor said, we can't have anything like what happened in New York on 9-11 happen here in Arlington!

Microwave is much less likely to suffer from backhoe fade! And you'd be amazed what leased lines cost - I've seen several places spend some money up-front and actually save money in the long run. A single T1 can run north of a grand a month depending on local loop issues...

I completely understand the cost angle and the desire to bypass facilities that may belong other entities. Tie that with the flexibility to point the dishes where you need to without buying/leasing land, etc. But just say that. Don't say microwave is more reliable than fiber.

Hello All,

I've been monitoring the TGs used by Westworth PD on the Breakthrough Communications LTR system the last two days and have not logged any traffic. I have been hearing them on 453.325/D343, their TALK1 (in the past). It sounds like it may be their dispatch channel nowadays. Has anyone heard any news or know if they have dropped off of the BC LTR TRS? I'm thinking they may have gone back to their old UHF channels from what I've heard.

Subject: [dfwscan] New Ellis County Frequency

I have recently begun hearing Ellis County fire traffic on 155.115. Mostly, it is a transponder-like recorded voice reply to fire tone-outs. For instance, a tone will be sent on the main fire channels (154.265/155.58), and a second later, a recorded voice replies on 155.115 with "Milford has received the page." Then the dispatcher voices the run information on the main channel.

This morning, I am also hearing Ellis County SO dispatch talking to animal control officers on this same frequency.

155.115 is not listed to Ellis County on RR.com. Does anyone know what the deal is and when it started?

Rob

Topic: 30647 Message: 30704

I know the FCC site use to (and probably still does) have explanations for the various modes and numbers describing voice, data, etc. The old bookmark to this information is dead like Versions 1 & 2 of the online FCC database. Is there a way to tell from the below information if these will be digital frequencies? Thanks...

From: Mark Colborn
Topic: 30668 Message: 30706

The overhead pass (southwest to northeast) last night around 8:15pm was very impressive. The Shuttle was trailing the ISS about a hands length in the sky (have no idea how many miles that would be in space!) but both were very bright and visible for several minutes. Heavens Above lists another pass tonight, but the ISS will be much dimmer.

Mark

From: pwrigg
Topic: 30707 Message: 30707

If anybody has the ability to monitor the input of the DPD CH 8 repeater, 465.125 right now some idiot is re-boradcasting the NOAA weather radio on it.

Maybe someone out there can hear the input and help narrow down where its coming from.

To me sounds like someone with a cross band amateur raido, because when i first stratred hearing it i heard what sounded like button pushes, and the auido has been constant.

Maybe Dallas will be the first to use the new law against interfering with public safety transmissions.

30710. Fatal wreck on Flower Mound/Argyle border

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-10 03:00:55 UTC
From: Blaine Brooks
Topic: 30710 Message: 30710

Engine 502 and 501 on scene of a fatal somewhere. Just turned on the scanner so I didn't catch the location. Did hear on of the BC's advise dispatch of at least one 27, and Argyle assisting.

I saw the page before it was edited for the fatality, mentioned something
about a leg amputation.

Yeah, it's a real baddy. BC 502 in talking with Careflite said they are still not sure the extent of the injuries on the person/persons who survived the head-on, but there IS talk of some kind of amputation. I tell ya'..when a wreck does happen out there, it's usually not a good outcome at all. Sad.

30715. HAZMAT drill

Yahoo group: dfwscan (2008 — 2009)

Not that I can tell. I live in Mansfield and still hear them just fine on the FD channels. In fact, I just heard them loud and clear on my mobile scanner from Northeast Arlington about an hour ago, so the signal is not weak. Might check and see if you accidentally locked them out or something.

Rob

30723. TXDPS Sitrep for flooding

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-12 15:42:29 UTC
From: Myles Barkman
Topic: 30723 Message: 30723

Check out this Situation Report for the ongoing flooding potential in
Central Texas.
ftp://ftp.txdps.state.tx.us/dem/sitrep/Heavy%20Rainfall%20Event%20SITREP%202%20091109.pdf
Resources are committed if needed for rescues.
Bell County, in particular, Salado appears the hardest hit yesterday. The
Main Street bridge over Salado Creek was washed out.
FM 437 in Milam county is flooded at Donahue Creek (between Val Verde and
Rogers).
Parts of I-35 were closed yesterday due to flooding.
Threat moving north into North Central Texas/Southern Oklahoma, especially
north of I-20.
Some flooding already occurring around Altus Oklahoma.
See heavy rains leaving southern Tarrant County after they got hit again
last night.

At least fire potential should go down except for lightning and outflow
winds.

Here in Houston area, not so bad yet but rains are coming and may get a
flash flood watch.

Well, we needed the rain.

From: rob.davis@armynursecorps.com
Topic: 30725 Message: 30725

For the last several days at least, Hurst FD has been operating exclusively off of channel 2, 859.4625. The only transmission I have heard on channel 1 (855.9875) was when dispatch toned out a run there last night by mistake, and an FD unit told them they were on the wrong channel. Anyone know why they moved to channel 2, and if it is permanent? Channel 1 still obviously works fine.

From: imquazar
Topic: 30725 Message: 30727

First, the qualifiers.. I listen to Hurst PD (3 frequencies) and Hurst FD (2 Frequencies) about 80% of my day when I'm not at work. Although I listen that much, it's usually only passive listening until something happens. :)

That having been said, The other day I was listening, and they were doing some testing. As I could tell, one of the stations was having a problem receiving the tones. They're working on it, but made the decision to run calls on channel 2 for reasons that may or may not be related.

I heard a communication last night or the night before on HFD/1 where Fort Worth fire dispatch was calling one of the medstar units on the Hurst fire frequency. Hurst FD dispatch came on and told them they were on the Hurst frequency.

Since we're on the topic if Hurst, It's amazing the opportunities they have before them with regards to frequency allocation, I don't understand why they don't jump on board with one of the trunk systems. Seems to me from an interop standpoint that it'd be a win/win for them.

Regards,
-Lee

From: kc5rhb
Topic: 30730 Message: 30734

I could of IPN'd it if I was a IPN dispatcher. I didnt know about the other alarms. When I was there of course Edgecliff, Kennedale, Forest Hill, FW, were there and other trucks that were staging down the street but couldn't see who they were. The one time I didn't carry and of my HT's with me, I wasn't in my truck. I mentioned earlier about the cause of the fire because that house went up quick. But in about 15 min the WHOLE house was fully engulfed and FD went into defensive.

30735. Unlisted Lockheed Frequency @ NASFW

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-19 13:08:18 UTC
From: commscan
Topic: 30735 Message: 30735

Hi All,

I've been trying to confirm the user of 159.720, PL 167.9, for a few days now. I haven't put much time into it but this morning I was able to confirm this is definitely being used by Lockheed "Fire Dispatch". The normal Lockheed Fire Dispatch frequency is 149.235/167.9 PL. So I'm guessing this'll be an input frequency. It sounds like it would be too from the radio traffic. Occasionally, I only hear one side of the traffic. Strangely enough, the Fire Dispatcher comes in weaker than the mobiles but still clear enough to have no problems copying.

I've found no listings for Lockheed on 159.72 or 159.7275 on the FCC database.

No chance it might swing by Houston this time? I missed the last one as I
was at work and didn't know about it anyway.
I'm home today so of course it won't happen. :(

Wish I could take some pix of it.

30744. FS mint 996T scanner

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-20 23:03:24 UTC
From: Saad Mahaini
Topic: 30668 Message: 30744

Hello to the group,

I'm considering selling one of my 996T scanners to buy the handheld model.
I'm asking $400.

The scanner is absolutely like new. Never mobile, only been used in my ham
radio room. It comes with everything that came with it from the factory,
box, mounting bracket, cables, power supply, ant, documentation etc

Please email me directly if interested.

Thanks, Saad

Someone said they heard that and they spent some time at the end of the runway looking at it but they didn't change anything.

The shuttle was supposed to take off 10 min after the dc9 lead. They got on the runway and were waiting to be cleared for take off but were told they were trying to find a place for them. I guess atc to Shreveport. They called back several times trying to get priority, they said they were out of sequence qith the DC9 and burning fuel and might have to refuel again, requested they call the base commander and asked for the number themselves. When they were given the number they told them 30 sec and they could go, a lifestar was crossing the south end.

Don't suppose they keep a spare tire or two in the trunk, eh?

Interesting flight path according to FlightAware. If you look at the track
on the aviation sectional, you can see they flew just west of Redbird and
then hooked it hard right to fly directly over Love Field. Is that a
typical departure route or were they giving folks in Dallas something to
look at?
Don't know what altitude they might have been at.
Did they have the escort plane leading like last time in December?
There was a NASA932 (DC-9) that took off at 4:20pm heading to Barksdale.
He started here at Ellington and flew to Edwards Thursday morning.
Looks like they flew ahead from Edwards, to Amarillo, to Carswell and then
to Barksdale.
Anyone catch comms between the two?

30751. RE: [dfwscan] Shuttle Discovery @ NAS

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-21 04:21:06 UTC
From: commscan
Topic: 30738 Message: 30751

I was on the roof of my house filming the two aircraft and I heard some chatter between them on my BCD396T. I know it was either on 123.125 or 235.4 but I couldn't look at the scanner's screen to see which. The DC-9 came in a good 10 minutes before the Boeing aircraft carrying the shuttle. I believe it was NASA 932 that was the support aircraft (DC-9) too.

FlightAware.com seemed to be lagging in showing the trip from Amarillo to NASFW. The arrival time was showing to be 1:54 PM but the actual touchdown was more like 2:15 PM (nothing unusual there). But I do not think FlightAware did not show the Boeing 747 aircraft with the shuttle, NASA 911, on their tracking map until they had already been enroute to NASFW for a while. I believe it was supposed to be a 1 hour 19 minute flight at 1500'. I went up on the roof about 1:40 - 1:45 PM and FlightAware was just showing the dotted lines of the flight path between Amarillo and NASFW finally at that time. I'm not sure what the (dashes/hyphens) dotted lines meant, but when I came down and looked once I was back inside it was a complete, full line showing the path with some underlying dashes and a few that were outside of the solid line (all on the FlightAware tracking map).

Great picture Ben. I'm not sure what a blowout of a multi ton aircraft might look like, but if I'd been told it happened, I'd believe it from the picture you posted :)

Brian

Hello Everyone,

· 436.000 mhz

· 1:21 am (7:21 UTC) TONIGHT (Wednesday AM)

· Beesat <http://www.raumfahrttechnik.tu-berlin.de/menue/forschung/projekte/beesat> Online Link

· Every 40 seconds. It will send "DP0BEE" in CW

One of our Flower Mound CERT members, David Ward, KE5FCS, had the pleasure hosting an exchange student from Germany some years back. That student is now grown with children and involved in an exciting space program.

Tonight they will launch their satellite from India. And, here is where we can help. We are located in the area that will have a chance to receive the first transmissions from Beesat!

The program is hoping that we will listen and confirm that the satellite is actually transmitting!

If you can lend an international hand and you have a reception report you can send it to falk@nohka.de or via their skype account – “beesat_team”. More details below…

David and a whole crew of scientists will really be grateful!

Thank you so much for your help!

Don Chambers

K5OAK

Subject: Details for the launch of BeeSat

Hi David!
Today I talked to our two-man team who were in India last week. They had news about the launch, which will occur sooner, than I hoped for after the long delays. :) The launch will definitely be on Wednesday the 23rd of September. That would be THIS Wednesday. :D
BeeSat will be launched as secondary payload on the PSLV-Rocket that will launch an Indian satellite called Oceansat-2. The rocket will be

launched from Satish Dawhan Space Centre in Sriharikota, India at 06:21
UTC (according to last information). The beacon will be switched on at
around 07:00 UTC.
You and your radio amateur club in DFW-area will be the first
(worldwide) to be able to receive the beacon! So I hope you will use
this opportunity to help us verify the transmission or the beacon.
According to our last simulations the Satellite will be within your
reception area at around 07:21 UTC. What I can tell you at this point is that you will have to point
your antennas to west at 07:21 UTC and listen to our beacon on 436.000
MHz. Our beacon will be sent every 40 seconds. It will send "DP0BEE" in CW.
For the launch we've set up a skype account which will be online to
receive any reports of the reception of our beacon. the skype name is
"beesat_team".
I will send you more, as soon as I know anything. Please forward this
eMail to your friend. I put my team-mates in cc. hope you don't mind.

Talk to you later.
Love.

Falk.

Welcome to the group, I'm assuming "Willie" ...

Personally, I believe the south side of the metro is way
underserved with monitors, as well as dispatchers for IPN,
who can inform others of situations like this. I invite you
to join and keep us informed (there) and on this list.

I know Rob Davis tries to keep his ear on south side happenings
and such for IPN, but he is only one person. The more the merrier.

Myself and DFW205 both cover the southern Metroplex pretty regularly. The problem is that DeSoto-Duncanville-Cedar Hill finally stopped toning out on their conventional channel, so now all they use is the MPT1337 system, which I haven't even bothered to try and figure out yet.

We pretty much only get incidents in the "Regional" system now if they get mutual aid from a surrounding city, like Lancaster or Dallas. DFW205 caught the DeSoto fire that way. They always get a Rehab unit from Ovilla too, which I will usually catch.

But yeah, once I figure out this MPT system thing, that should add a good dozen pages a week to my coverage.

Thanks, Bill! Problem is, it takes a computer scanning program to follow a specific talk group, doesn't it? I don't listen to cops, only fire and EMS. If I had to listen to every 27, 28, 29, and barking dog in the Tri-Cities, I'd never listen. I may have to break down and either get a MPT radio, or learn to use Trunker.

You've got to be kidding me. Did they actually tell you that you were rejected, or did they just not get back to you? Sounds more like your app may have just fallen between the cracks. Or else, they found out about that little "incident" we won't talk about. ;)

(just kidding. I know of no incident)

Some very young kid (or an adult on helium) has gotten hold of a radio on the Cleburne CSSI LTR system and is playing around, screaming various amusing things.

"We need backup!"

"You're fired because I'm a sergeant!"

"We hate the government!"

"We've got serious damage! We have spiders and tarantulas all over the place!"

The frequency is 462.125, which is CareFlite Ground's Johnson County EMS channel, as well as some oilfield services company. Enjoy it while it lasts!

You can monitor this system fairly easily. They put a PL tone on all the freqs so as to reduce interference with Dallas. I think it’s 131.8. Plug in all the channels with the PL and then lockout the data channel. I’ve only heard PD and FD traffic and there are only a couple of channels per site, so it’s not too bad. I can hear them all the way up in Allen. If you have the capacity program each site as its own system, makes it easier to identify the agencies.

Russell

Just heard Burleson FD tone out on an EMS call, dispatcher advised that Medstar is at Level 0 and has no "box" to respond to the EMS call, so they are requesting a box from Crowley. Thats the first I've heard no Medstar Units available (for Burleson). When the firefighter keyed up the radio and ask "Medstar has no one available?", you could hear the surprise in his voice.

Not sure if it went through or not.

Level 0 usually means the person is deceased. Medstar probably didnt have coverage due to the posted unit responding/on some other call and didn't have time to fill that post.

Level 0 means there are no ambulances currently available to respond to a call.

Priority 0 means deceased or unsalvageable, from the usual triage systems.

Priority 0 is a deceased person. Typically level refers to number of units avaiable. It's not unusual for medstar to hit level 0 (no units clear) for short periods of time.

Subject: [dfwscan] Re: Burleson Fire Responding EMS Call / Medstar Level 0

Not sure if it went through or not.

Level 0 usually means the person is deceased. Medstar probably didnt have coverage due to the posted unit responding/on some other call and didn't have time to fill that post.

Hmmmm, well FD wasn't working a "deceased" call. the dispatcher said, quote "Medstar said they are at a Level 0 at this time and are unable to send a box", and around 21:11 a Medstar supervisor showed up to the call address along with Crowley EMS and FD. Then, I don't know, about 30 min or so later, Medstar finally got some boxes back in the Burleson district, or post.

Anyways, thats the first I ever heard them say Medstar is at a Level 0 and don't have any units to respond to a call.

Yeah, the only place that goes Level 0 more than MedStar around here is Arlington. They go that way a couple times a day, often getting a mutual aid ambulance from Kennedale to run into Northeast Arlington on a Priority 1 emergency. It's insane. But the cities won't staff them adequately to keep covered properly. Instead they think, "wow, we don't have enough ambulances. I guess we should hire more firemen!" This only perpetuates the problem instead of fixing it. Morons.

I responded to the original poster only and not the group for the same reason that Dan shouldnt. MedStar has a far reaching eye and employees have been fired for less than posting information on open forums. But I will be glad to discuss it in private.

30784. Fort Worth to replace one of the Communications tower

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-27 02:33:01 UTC
From: Ed C.
Topic: 30784 Message: 30784

On next weeks City Council agenda there is an item that appropriates funds to replace the Rolling Hills tower. Construction to begin in the next 4 months.

The last bit of info on it (some time ago) was a 480' self supporting tower.

Please ignore the attached SPAM - I have no control over it.

30786. Lake Cities Fire Department Change

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-28 15:25:22 UTC
From: Brandon Thetford
Topic: 30786 Message: 30786

Everyone,

Effective October 1st Lake Cities Fire Department will be moving their dispatch and operations to the Denton County Trunked System. They will be using Channel 14 (Talkgroup 8656) for operations and will be dispatched by the Denton County Sheriff's Office. Their current operations on the Lewisville Trunked System and with Highland Village Dispatch will cease. Highland Village will of course continue to function as it is now with Highland Village FD being the only agency. Just an FYI for those Denton County listeners.

Brandon

30789. City of Denton going to a second transmitter site.

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-09-28 17:56:32 UTC
From: Bob Tickner
Topic: 30789 Message: 30789

On another Denton County note, The City of Denton City Council will consider approval October 6, 2009 for the purchase of a simulcast system for a secound transmitter location on the City of Denton trunking system. I understand this new site will transmit from a location near FM2181(Teasley Lane) in far south Denton near Alton Road. This should help with some dead spots in the southern sections of the city and in south Denton County. You will note it says it is for the Denton Municipal Electric Department. The City of Denton owns it's own Electric Operations, the radio system is under the responsibility of the Electric Department since it has a greater financial flexiblity to invest in the technologies. All the using city departments pay therir share of expense and use.
Consider adoption of an ordinance of the City of Denton, Texas providing for, authorizing, and approving the expenditure of funds for the purchase of a second Analog SMARTNET Simulcast System from Motorola, Inc., which is available from only one source in accordance with the pertinent provisions of Chapter 252 of the Texas local government code exempting such purchases from the requirements of competitive bidding; and providing an effective date (File 4404-Purchase of Motorola Two Site Simulcast System for Denton Municipal Electric in the amount of $2,615,550).

From: Patrick J. Hennessey
Topic: 30756 Message: 30791

The digital spectrum means decoding transmissions (heck, even figuring out modulation) is out of reach for anyone without over ten grand for hardware.
There was a recent Circuit Celler article on the subject.

But on the cheap it is easy enough to detect signals and frequencies using the received signal strength indicator (RSSI) built in to TI parts. Combine it with a directional "pringles can" antenna and much fun can be had. Or for simple hobby work purchase a ready made TI ezrf430-2500 kit for $50. I have two and they are fun.

Here's a link to a relevant thread.
http://e2e.ti.com/forums/t/2037.aspx

I think the answer iv given is the best you can hope for unless you want to scan specific technologies. The ones I know can be scanned secondhad (haven't done it myself)

WiFi
ZigBee
SmartPower (ZigBee used in smart meters)

For these three it is possible to actually decode and read messages in certain instances.

Hope this is useful -- let us know if you build something and it works.

Sent from a mobile device.

30806. Delayed Broadcast radio at Cowboys Stadium

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-05 15:30:43 UTC
From: Jay Pinkerton
Topic: 30806 Message: 30806

Went to the A&M vs Arkansas game over the weekend at the new Cowboys Stadium. Looked in the newspaper Saturday morning to see which radio station had the broadcast for the game. 105.3 FM. Great! I thought. I can take my scanner and listen to the game, Arlington PD and event staff. As soon as I get there, I notice they are selling event radios that are advertised as "No Delay". Sure enough the 105.3 broadcast came through fine but was delayed by about 30 second. I guess Jerry has to pay for that dang stadium any way he can!! I'm sure they have them for the Cowboys games too. Really made me mad. I scanned around the usual frequencies trying to find the un-delayed broadcast. 150 mhz, 450 mhz, 900 mhz band areas. I tried close call on my scanner. I couldn't find it. Does anyone know what it is? And if it is not scrambled or encrypted? I was so disgusted, I did not even look to see how much the un-delayed radios cost. Not that I would buy one!

I also wonder if this is legal for Jerry to do? Aren't the broadcast radio airways supposed to be free?

I was able to here Arlington PD inside the stadium by the way. About 3 to 4 bars on my BCD396T!

Thanks alot Jerry! One more reason not to go to that over priced POS!

There's a company (I forget the name at the moment) who has gotten a STA from the FCC to use those little radios you saw to broadcast the "home team" radio. I believe they're using frequencies in the TV channel 5 and/or 6 range. I have no idea if it's regular analog radio broadcasts or some sort of privatized encrypted setup they have. I assume the 105.3 was delayed to match their IBOC (hd radio) feed - that delay is approx 8 seconds give or take. Not sure why it would have been a whole 30 seconds.

Out of curiosity, what were they charging for those no delay things? I saw many folks with them there, but was too busy to scope out what they were asking for them. I assume they were "rentals" instead of buying?

I forgot to look how much they were charging! Sorry. I did try some of the old TV bands and did not here anything. I know I tried TV ch 1 - 20. I did not try any higher than that. Maybe it was on the 500 mhz range. I wish I would have tried a little harder but I wanted to watch the game. I wish I would have gone up and quized one of the vendors selling them. I tried close call and it did not work. The device was very small with no antenna. Would lead you to believe it would be on a frequency that could use a small antenna. Maybe down around the am radio band. They could use a small bar antenna inside them?

Next time I go, I'll take my Kenwood HT that goes 100 kHz in to 1300 MHz and does all modes.

Stuff like this that really makes me glad I hate sports!

If you get you hands on one be sure to look for the FCC ID number. That will tell you frequency etc. It should be on a sticker or molded into the case.

30812. RE: [dfwscan] Delayed Broadcast radio at Cowboys Stadium

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-06 00:21:58 UTC
From: Mark Saum
Topic: 30806 Message: 30812

Looks like it is somewhere in the FM radio spectrum, but jumps around...

Reprogramming
For 2009, owners of 2007 and 2008 radios will simply need to hold down the 2 white buttons for 3 seconds and tune the radio to the station that is broadcasting the game. PLEASE NOTE: This allows the radio to work as an FM receiver but will likely NOT work inside the stadium, due to interference. Also, many of the normal radio broadcasts are delayed, which is why LSR provides this service.

If you DO NOT plan on re-programming your old radio, it is a good idea to replace the battery to ensure you never miss any of this year's action. The battery is located under the earpiece and replacements can be purchased on our website, onsite at the venues and at Radio Shack and other electronic supply outlets.

UPGRADE YOUR CURRENT RADIO
If you want to replicate your great 2008 experience, we will re-program your 2008 radio for the 2009 season. As a valued customer we want you to have the same great experience this year as you had last year without having to buy a new radio. You can simply send your radio to LSR with a check for $10 (or credit card information) and we will re-program your radio for 2009. This also includes a new battery (a $5 value), a 2009 lanyard and covers shipping and handling from LSR back to you.

This re-programmed radio will then have a warranty for the entire 2009 season. If you experience any issues with the radio throughout this season, please see our sales staff at any home game for replacement, including all home basketball games this year, which effectively extends the value of the product by four more months into 2010.

This reprogramming process may take up to two weeks, although we will do our best to turn it around as quickly as possible. Simply send your radio and check for $10 to:

Live Sports Radio, reprogramming department
201 W. Big Beaver Rd. Ste 1420
Troy, MI 48084

WHY DO I NEED A NEW RECEIVER
Unfortunately the "no delay" re-broadcast requires a new receiver each year. The FCC issues frequencies for each venue the team plays in and we have to apply for licenses for each venue each year.

This will be similar every season, particularly since the schedule of away games is continually changing. We program the radios at the beginning of each season to include the frequency that is assigned for each stadium. We are unfortunately unable to get around this issue with the FCC.

We apologize for any misunderstanding relative to the fact that this is a seasonal product. We have done our best to communicate this to all of our loyal customers and will continue to do so. We are committed to providing quality products and offering excellent customer

service. If you have thoughts on how we can improve either, please contact us at info@....

Thank you for your continued support.

Subject: Re: [dfwscan] Delayed Broadcast radio at Cowboys Stadium

We program the radios at the beginning of each season to include the frequency that is assigned for each stadium. We are unfortunately unable to get around this issue with the FCC.

Is this a lie? Why can't the system listen for a PL tone or something on a set range (100hz - 500hz) and select whatever they happen to get licensed?

30820. Weirdness on KXAS ENG channel

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-06 13:52:28 UTC
From: rob.davis@armynursecorps.com
Topic: 30820 Message: 30820

Somehow, someone, somewhere, for some reason has the "Regional" MPT1327 system traffic cross-repeating onto KXAS Channel 5's ENG frequency, 450.3125. Anyone know what that's all about?

Rob

30821. CareFlite Johnson County Freq

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-06 13:58:32 UTC
From: rob.davis@armynursecorps.com
Topic: 30821 Message: 30821

Does anyone know who the co-users are on 462.125, the frequency utilised by Johnson County CareFlite ground on the Cleburne CSSI LTR system.

There is an oil/gas well service company that has always been on there. But now that school has started again, there is a high school on there using another LTR system for security and admin. It's not on the CSSI system, because it's stronger than CareFlite when they are using the frequency simultaneously.

As annoying as it is to have to listen to, the high school traffic can actually be pretty interesting. Sounds like a tough school. Lots of fights and other drama every day.

Rob

500 mA output. Guess that is why close call did not catch it.

I don't see anything about what mode they use. I hope it is not digital.

This system seems to be more prevalent in College football. I've heard much of the profits goes to the university's. So I guess that is how they sell it.

I haven't been to a Cowboys game yet. Does anyone know if they use it at Cowboys games?

My brother says they use it at A&M Home Games. I'll get him to try it out.

Actually, that's KDFW's frequency - Fox 4....an image maybe?

Ooops! My mistake. Memory's not what it used to be.

Could have been an image, I guess. The signal itself was strong, but the Regional signal that it was retransmitting was weak and scratchy. Didn't last but maybe an hour before it stopped.

I think someone got their hands on a cross band radio.

In the last month I have heard several public safety channels VHF, UHF being interfered with from what sounds like a cross band patch.

DFR 1, DPD 8, and I think one of the DSO channels. The DFR channel I heard several DTMF tomes preceding it, but it sounded pretty good once it was up, I think it was a FD from north of Dallas, as they had a MVA on Dallas North Toll Way at the time.

Now that I have typed this out I am thinking I might be wrong, as I have never seen a cross band radio other then Amateur, and they don't do trunking, and the interference sounded like a trunking system with Voter Recievers (clicking after the transmission has ended.)

Wise County (Aurora) | Aircraft Down | 154.445 | Currie Rd IAO Deep Creek Rd | Rhome E17, WCSO, M3 o/s twin engine aircraft down, moderate damage, missing 1 wing, unk souls aboard

Looks to be just outside Aurora city limits to the north of town, near some farm houses. Four patients. Three medevacs on scene. Telecopter 8 was first media in. Scab 4 is just now getting there, and is fixing to do a live cut-in on channel 4. Only patient report I heard was a 65 yom passenger with an open arm fracture and tension pneumo going to JPS by PHI AirMed.

More details about what I heard: It was almost definitely a feed from a scanner, and not an actual transceiver. You could hear all the DTMF bursts before and after each transmission that you'd only hear on a scanner, not a radio within the system. And it was a mixture of all the PD and FD traffic, not just one channel.

30833. Radio Systems PM Job at City of Dallas

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-07 17:58:17 UTC
From: spectreno9
Topic: 30833 Message: 30833

Folks,

I was browsing the City of Dallas job board and came across a posting for a job working on the City's radio systems. I thought it would be worth posting over here in case any of those looking for work or new work on the list could send over their names, since obviously it would be a nice synergy to have "one of us" improving my city's communications infrastructure.

Regards,
Patrick H. Dallas, TX

---
job posting taken from:
http://agency.governmentjobs.com/dallas/default.cfm?action=viewjob&JobID=124131

Bachelor's degree in computer science, mathematics, engineering, or business fields plus four years experience managing multiple major infrastructure and system projects for large enterprise environment. Experience must include management of technical staff and budgeting through various lifecycle phases. Requires effective oral and written communication skills for promoting customer relations with various City departments and knowledge of mainframe, midrange and PC environments. Must be able to manage multidiscipline, high performance work teams in a matrix project team structure and work in a diverse business environment with changing business requirements. PMP certification or familiarity with structured project management methodology, e.g., PMBOK is preferred. Eight year combination of specified education and experience will qualify.

This position manages the operation of radio network for the City of Dallas. Manages staff in a 24/7 operation to ensure that maintenance and support service level agreements are met. Experience with planning, implementing and supporting trunked radio system, microwave system, and radio data network to include project management. Ensures the security and integrity of information stored on the systems to provide reliable information; completes internal controls audit for applications, quality and database areas, and records management. Analyzes possible solutions to business problems and makes recommendations for the purchase of systems to meet department needs; may involve the review and approval of work done by subordinate analysts. Directs and coordinates system changes such as equipment installation or reconfiguration and implementation of new software to ensure greater system effectiveness. Provides the long-term planning and coordination of monitoring and maintenance of radio communications. Prepares budget and manages expenditures. Develops an accurate radio rate model to chargeback departments. Experience with SNMP management platforms and data analysis, the ability to produce and deliver technical procedures and training, proficiency with word processing, spreadsheet creation and database comprehension, previous customer service and vendor management experience. As a plus, experience implementing or support of 802.11x WiFi network or broadband wireless network.

I have problems with the Amber Alert programme. Just like this particular alert, many of them fall outside of the criteria it was originally set up for. This girl wasn't violently abducted. She's on the run with her boyfriend. It hurts the credibility of the programme and numbs us to what should be a serious issue.

True, but she is a minor who has run away and is in the company of an adult.. You might feel differently if she was your kid. I get the impression from the other facts stated she mostly lives on the street and does who knows what.

My gripe is with TXDOT and all their Amber / Silver Alerts on the emergency signs. Traffic slows way down when these signs are on, creating a traffic hazard.

I tend to agree with you Rob. And I hate driving down the highway and seeing more info about some 90 yr old geezer that's on the loose again. And more often than not, it's sombody's Grandpa that has alzheimer's and has went for a stroll in the neighborhood, and doesn't know where his house is. Violent abduction of kids? YES....Grandpa and Grandma Kettle missing? NO!!!

Blaine

Seems any sign will do that. Few weeks ago Lewisville had their
'Western Days' portable road sign lit up NB and SB on 35E. Couldn't
figure out why traffic was (worse than) horrible. Soon as we got past
the sign, traffic started moving again.

On Wed, Oct 7, 2009 at 4:53 PM, Bill Boyer <daweasel@...> wrote:

> My gripe is with TXDOT and all their Amber / Silver Alerts on the emergency signs.
Traffic slows way down when these signs are on, creating a traffic hazard.

I dont even bother reading those temporary signs, if it was truly important
it'd be written on a permanent one.

I don't really have a problem with those. It's the dishonesty of implying that a situation is something that it really is not by titling it an Amber Alert, when they know it was not a confirmed stranger abduction. They're scamming the system.

The best one was when they had all the flooding out in far west Texas.
They had highway signs in DFW warning I-20 was closed in Pecos. Freaked
people out that didn't know Pecos was 400 freakin' miles away.

I must then be one of the rare few who possess the ability to not
read signs while not slowing down.

What is multi-tasking coming to? :-)

I know we have quite a few EMS types here on the Listserver. Someone over at EMTcity.com made and posted this video rebuttal to the premiere of the new NBC series "Trauma", and it's absolutely hilarious. You have to check it out. It's going viral nationwide. It's even made it to Johnny Gage from "Emergency!"

http://www.youtube.com/watch?v=u3_wLWcdLIE&feature=player_embedded#

The names mentioned in the beginning, "Dust, Rid, and Bledsoe", are veteran members of the forum at EMTcity.com, including Dr. Bryan Bledsoe, the author of the Brady paramedic textbook, who is native to Fort Worth.

Enjoy, and pass it on!

Rob

Not surprised the alert has already been canceled, she probably just simply walked back into her parent(s) house like nothing had happened. Which I believe is what happened in Arlington about two weeks ago about 12-hours after the last alleged teen abduction following her new boyfriend's murder. The problem with this system is systematic of what is eroding the effectiveness and power of police all over our nation: liability and perception of image. Police administrators are more concerned about covering their butts, not looking bad, and limiting their personal and departmental liabilities, than doing what is right and within reason. Because the program exists, it trumps pre-Amber days when the police committed resources to the search and occasionally released a photograph to the media and asked for the public's help. Most cops know that it's an abuse of the system to blow the tone on a teenage runaway who either ran away with her older boyfriend, or was forced to leave. But, they have to cover their collective behinds in case the girl shows up severely assaulted or murdered. The Amber Alert should be reserved for stranger on stranger abductions; period. This would help take the "cry wolf" and angry ex-spouse seeking revenge aspects out of the equation.

I dont think it should have been reserved to stranger-stranger only. It most certainly should apply to ex-spouse seeking revenge types also. Remember a few years back the guy that called his ex-wife and murdered his kids while she listened to them scream over the phone?

I dont know which was funnier, the trauma bit, or seeing the other "skits" made from that footage, the smoking ban one was great.

And to keep this on a scanning topic, you can hear NOAA weather radio on 162.550 in the Fort Worth area..haha...

Happy Scanning...

I've been in Austin in school all week, and I just got back. We're unable to go to Yahoo on the "company" computer or check Yahoo Mail.

There are several criteria that MUST be met to qualify for an Amber Alert, sorry I don't have them all here to post them, but then the information MUST be sent to the Department in Austin for review. Then, and only then is an Amber/Silver/Blue Alert activated.

I think this is the first time I've heard any activity on 10672 on the Fort Worth Public Safety system. I heard "logistics" talking about sand bags. I'm not sure it's drill or realtime. I have 10672 as Tarrant County Health Department. There's not many transmissions, but it might be worth listening in.

I did hear a North Richland Hills mobile command post going to Haltom City for a drill this morning, so maybe they are related.

In the days before the castration of so many law enforcement agencies, this would've been over before it started! I like the infamous TXDPS methods best. Shoot out a tire or shoot a hole through the engines block :)

This was more like a go cart race than a pursuit today...

Was watching some of the "chase" on national TV here in Houston during my lunch break and didn't get to see how it turned out until now.
http://cbs11tv.com/video/?id=47315@...

I especially like the comment about him nearly hitting the officer in the street.
"It's not my fault he ran in the middle of the road."
Au contraire, I think that comment is going to come back at him.
He thought he was doing the right thing. Apparently, his record shows he has problems figuring out what the "right thing" is.
At least no one got hurt.

So to keep this on topic, does anyone know if any interop freqs were used? There were a lot of counties/radio systems this went through. Or were the agencies using cell phones?

Myles

30869. Re: [dfwscan] Police chase Dallas live right now

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-10 04:42:40 UTC
From: Rusty Worley
Topic: 30858 Message: 30869

I listened to about an hour of the chase; picked it up when they were running through McKinney. I never heard anything on the DPS Statewide system, but I never do (think I don't have my PSR-500 programmed right). From what I heard, Collin County Dispatch was "Command." BTW, the dispatcher lady was doing a super job. She was in constant contact with the two Melissa squads until Dallas Air 1 took over communications. But Air 1 seemed to be still communicating via Collin County Dispatch. Air 1 did say he was in contact with various DPS units along the route. I gave up after they got to Navarro county and the CCSO dispatcher lost radio contact. Could hear the Melissa units and the helo all the way through Collin, Dallas, and Ellis counties, though. When will these turkeys learn that running ain't gonna work (unless you're riding a crotch rocket at night)? Glad nobody got hurt.

Subject: Re: [dfwscan] Police chase Dallas live right now

Was watching some of the "chase" on national TV here in Houston during my
lunch break and didn't get to see how it turned out until now.
http://cbs11tv. com/video/ ?id=47315@ ktvt.dayport. com

I especially like the comment about him nearly hitting the officer in the
street.
"It's not my fault he ran in the middle of the road."
Au contraire, I think that comment is going to come back at him.
He thought he was doing the right thing. Apparently, his record shows he
has problems figuring out what the "right thing" is.
At least no one got hurt.

So to keep this on topic, does anyone know if any interop freqs were used?
There were a lot of counties/radio systems this went through. Or were the
agencies using cell phones?

Myles

They were already in Dallas before I saw the pursuit. I thought for sure someone else had paged it out by then, so I didn't do it at the time. Then as they headed south, I tuned in Ellis County SO to hear it go through there. ECSO called it out well. About that time, I saw nobody had ever paged it, so I did so with the ECSO frequency. Repaged it when they got deep into Navarro County with a new frequency.

Navarro County SO dispatch tried to get her DPS units on the radio, but said they were all over on the DPS Waco channel instead, which I don't have programmed in. But most everything was clearly called out on the NCSO channel. Looks like DPS didn't get too involved anyhow, once it passed through Corsicana.

I never did try to listen to Inter-City or NSPAC (or whatever it's called now) to see if anything was going on there.

Just talked to the Irving Fire Chief and also the Public Safety Director they are changing the city EDACS frequencies in the morning to accommodate cell phone providers. They didn't have the new numbers with them. That is short term.

Long term they are going to a digital encrypted system in say about 3 years.

Thanks for the heads-up Wally.

I've been hearing lots of radio testing the past month or so, and saw the FCC license changes recently. They'll all be 15Mhz lower.

http://www.radioreference.com/apps/db/?cs=WPJQ645

Don't know why the FD's want to encrypt. That's too bad, and I really hope they don't.

Ben

I'm guessing that means Irving will be using the NPSPAC repeaters during the switchover.

I hoping that moving 15Mhz lower and a radio system tune-up, means I'll be able to hear them better :-).

FYI: LCN 4 and 6 should be the same as before, since they were below 866, or whatever the magic frequency is that's the cut off point for rebanding.

I believe once the rebanding is done, it should look like this. I set up a second site in my Uniden systems for the rebanded frequencies.

Frequency LCN L/O Vol Adj Num Tag

853.53750 1 False 0 NONE

853.08750 2 False 0 NONE

853.58750 3 False 0 NONE

855.46250 4 False 0 NONE

853.63750 5 False 0 NONE

857.21250 6 False 0 NONE

853.73750 7 False 0 NONE

853.83750 8 False 0 NONE

853.58750 9 False 0 NONE

853.91250 10 False 0 NONE

FD dispatchers announced earlier to put the "loaner radios on the trucks", and that their Nextel phones will be used as backups(kind of ironic).

1135 seems to be the main talkgroup for the radio techs. They haven't made the witch yet.

They don't need a license. They are apparently doing it under part 15.

Here are the details:

Section 15.237 Operation in the bands 72.0 - 73.0 MHz, 74.6 - 74.8 MHz and 75.2 - 76.0 MHz.
(a) The intentional radiator shall be restricted to use as an auditory assistance device.
(b) Emissions from the intentional radiator shall be confined within a band 200 kHz wide centered on the operating frequency. The 200 kHz band shall lie wholly within the above specified frequency ranges.
(c) The field strength of any emissions within the permitted 200 kHz band shall not exceed 80 millivolts/meter at 3 meters. The field strength of any emissions radiated on any frequency outside of the specified 200 kHz band shall not exceed 1500 microvolts/meter at 3 meters. The emission limits in this paragraph are based on measurement instrumentation employing an average detector. The provisions in Section 15.35 for limiting peak emissions apply.

Yesterday, I noticed in the FCC updates that Glen Mitchell shares, that Ferris has a license for 155.325.

http://tinyurl.com/yk9cjpz

RadioReference has them on 154.325.

http://www.radioreference.com/apps/db/?ctid=2592

Which is also licensed

http://tinyurl.com/yzal6uz

Can anyone please clarify, correct, or update those? I don't get down that way much, but like to have the surrounding counties preprogrammed in case I do.

Thanks,
Ben

Was wondering for the longest time why I was not receiving any more traffic info on the scanner from the folks at Traffic.com. They jumped to a different frequency!....450.1375 No PL or DCS tone I could detect...yeah, they've probably been on it for a long time, but honestly, I'm hardly ever up at this hour anymore, so it's taken ME a long time to find it. 455.800 (85.4) & 450.6125 as well (PL 67.0). 450.6125 is the old 'BAP repeater on Broadcast Hill. Not sure exactly what 455.800 is being utilized for. Possibly Laura or Micheal with the Dallas Co. stuff.

155.325 is the correct frequency for Ferris FD. I have never heard them on 154.325, and only discovered them on 155.325 by total accident. I figured someone just made a typo on RR.com. Works out better this way, because 154.325 is hella crowded already.

Topic: 30889 Message: 30889

I hope that I have not missed this topic already but was curious if anyone had all the freq. for the airshow next weekend on the 25th,26th?
I was planning on attending the show but wanted to get the scanner updated with all the freq. for the show.

Thanks in advance,

30890. RE: [dfwscan] re: air show freq.

http://www.allianceairshow.com/

Below are some frequencies from my FreeScan files. Some of the frequencies may have changed since the last show(or whatever one I scanned these at).

Happy Scanning, and I hope it stops raining soon,

Ben

I have also noticed KRLD's current Dallas traffic guy Michael Sively has been popping up on what was on my list of stuff as

455.6375 CSQ KLUV MARTI

instead of their old frequency

455.6625 CSQ KRLD DALLAS/DENTON CO TRAFFIC MARTI

(I guess CBS took Max Miller and John Driggs out back and shot them, too? Haven't heard either of those guys in forever.)

I need to do an updated in depth search during the morning and afternoon hours, and try and get some of the media frequencies. Many of the old ones are still in use (ENG, etc.), but there has been some changes with traffic, etc. ....There's probably some changes with the remote broadcast frequencies too, but honestly, I could care less about those, and they are pretty darn boring unless you're a monitor on the list that just enjoys listening to an open mike, music, and usually screaming people all the time at some party. ENG and traffic is where the action will be if there is something big going on....and usually just the PRIMARY frequencies.

> (I guess CBS took Max Miller and John Driggs out back and
> shot them, > too? Haven't heard either of those guys in forever.)

Well, I do have media friends on Facebook, but I have been out of the loop for so long, I did not even realize that a former boss of mine had died over a year ago. Yeah, I have definitely been out of the loop! Anyway....
There have been several shakeups with WBAP dropping Traffic.com and going back to Metro Networks. It's a strange situation. It ousted Mike Shannon and a few others, that, like him, either were fired, or refused to make the transition. Randy Fuller, Laura Huston, Monty Cook, and Michael Scott basically made the transition back to Metro. Randy provides info morning and afternoon on 450.1375, but the Metro frequency of 450.5875 remains active too. It's an interesting setup to say the least. Laura has always been on the payroll for 'BAP. But Monty, Michael, and Randy are now on Metro's payroll. CH 8 no longer uses Micheal or Laura for TV shots, resorting to using their own chopper shots instead. Although they retain Traffic.com for their traffic info for Alexa. Confused enough already? ;)

As far as (flying) Max , as opposed to Office Max (yes, there are two in that operation)....I have no idea what he is doing now....as well as Driggs. The state of radio is a very sad one in DFW, with many very good reporters and broadcasters out of jobs. Just like the rest of business and jobs in general, everything is in the crapper pretty much across the board.
And those that ARE still in the business fear the closed door and pink slip every day. I absolutely loved my years in it with so many great experiences and friends, but would I go back?. One part of me says "hell yeah", while the other...and probably more intelligent part....would need someone to hold a gun to my head, or give me one hell of a great offer. Not likely in today's climate...where el cheapo and "let's get this college kid for the lowest wage that doesn't know s**t and put them in a supervisor or manager role" mentality rules...

30898. Bad wreck in Plano

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-14 03:01:05 UTC
From: Blaine Brooks
Topic: 30898 Message: 30898

NB 75 just past Parker. Was driving on the northbound service road right after it happened. SUV completely flipped over wheels up. Didn't look good. Since I new to Plano and don't really know the PD heirarchy, all I know is there was crapload of "CAPS" on scene...according to the radio...I'm assuming these are supervisors....as one flew past me going code on the service road. Freeway is still closed. Thinking this is a crime scene/fatality. Big traffic backup. PD on East Channel. FD ops on 3, some Traffic units on their car/car rerouting traffic through old town. Careflite could not launch because fog has visibility down to about 200 feet. Really bad up here on the northeast side of the Metro.

Blaine,

I've heard these guys on Lake Lavon using the Collin County SO Disp talkgroup. I could tell what unit numbers they were using but for some reason all the Unit Numbers and Code lists have disappeared from the Radio Reference listings and do not appear in the Wiki. Lots of good data lost there.

Russell

Russel & the List,

A lot of that stuff was moved off to the county wikis

http://wiki.radioreference.com/index.php/Collin_County_%28TX%29

Ben

>Blaine,

I've heard these guys on Lake Lavon using the Collin County SO Disp talkgroup. I could tell what unit numbers they were using but for some reason all the Unit Numbers and Code lists have disappeared from the Radio Reference listings and do not appear in the Wiki. Lots of good data lost there.

Thanks Ben. I wondered where it went. I guess I assumed that that all that would be linked via the Collaboration link on the system page. Thanks Again,

Russell

I've been searching and scanning the corp of engineer frequencies for the past six months trying to find out the COE channel(s) that are being used there. So far I've found nothing.

I hear their units talking on the Collin Co system but I'd still like to find their government frequencies.

I was told the Corp doesn't talk on the Gov VHF anymore. I know as for Tarrant County, Benbrook Lake, they no longer have VHF antennas on their trucks, just UHF antenna. I know they have Benbrook PD radios in their trucks but don't know what they use to chit-chat on.

Also a lot of the TXPWD VHF frequencies are still used, mostly for state parks. I hear Cleburne and Whitney state park traffic all the time.

Games Wardens mostly work off whatever agency territory they are in. Like hear in Tarrant County, Benbrook Lake, they work off the TCSO TRS system and Benbrook PD channel. One Game Warden truck I saw didn't even have a VHF antenna on it.

So I guess it all depends on where you are at to find out what they are talking on.

Hope that help,

David, KC5RHB

They may not be on VHF at Lavon but they still are at most other places. I haven't seen any of the trucks used by the Lavon folks so I'm not sure. I've been thinking about driving by their office one day to see what antenna type(s) they do have. They could be on UHF although 95% of the other offices are still VHF.

Back 10 and more years ago, when I lived and boated there, they would be on 163.435, if I remember correctly. Also on the Wylie VHF channels back then. I can't confirm where they are currently.

Thanks to all that responded on the PWD stuff around Lake Lavon. Looks like the consensus put them on the Collin Co. system and Wylie exclusively. I think Corp has gone to cell phones, as I have not heard a peep out of them in YEARS on 163.4125 or 163.4375.

As far as Grapevine, Lewisville Lake, and Ray Roberts, I know 151.355 CH 5 PL 110.9 has been used MANY times. I have personally confirmed this. Ray Roberts parks on the lake use a repeater (I think it's on 159.345), but I forgot the PL. CG Auxiliary on Lewisville ("Foxfire") has been on 156.800 & 157.175, with the MSO broadcasts on 157.100.

Just a thought... I wonder if it is possible that the Corps of Engineers Rangers may be operating on the GSA FPS UHF channel? It would make sense for them to consolidate dispatching rather than dedicate a dispatcher to the very few, very un-busy Rangers out there. Anyone monitoring FPS enough to know?

The Lake Texoma Corp Rangers operate a repeater on an Air Force allocated VHF Govt channel in addition to using 163.4375 simplex so they could be almost anywhere.

Went by Benbrook Lake today. The Ranger trucks only have a UHF antenna on it. Even when they were on VHF they had a UHF mobile radio to talk to Benbrook PD, now NO VHF radio, only UHF. If someone could post the GSA FPS freqs I can try and monitor them. I know back when they were on VHF the Rangers talked ALL the time. Thats why I had their freq in all my radios because I was out there a lot.

P.S. if they are digital, I have no digital receiver at this time

It's been a while since I've monitored them, so I don't know how accurate the info at the link below is. RadioReference has them under Texas area wide

http://www.radioreference.com/apps/db/?aid=1338

Besides visiting the county you are interested in on RadioReference, sometimes you'll find some good stuff at the state level.

http://www.radioreference.com/apps/db/?stid=48

Also, sometimes there's lots of good info and links under the collaborate links on the top left section of most database areas.

Happy Scanning,

Ben

30928. VHF P25 Trunking Test System

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-20 19:01:23 UTC
From: js_scan888
Topic: 30928 Message: 30928

There's a P25 trunking system being tested in the DFW area for the past couple of days.

WACN = 1
SYSID = 7
Implicit Mode (no freq info)

156.7500 morse code id WD2XHY
158.6500
159.2000

WD2XHY is an experimental license to EF Johnson. Their location is in Irving, near the airport. I think this solves some of the mystery systems people have heard in the past with the WACN of 1 and SYSID of 7.

Here's an old link of one system I noticed back in April / May of this year:
http://groups.yahoo.com/group/dfwscan/message/30045

30929. Arlington Tac 3 active

30930. Re: [dfwscan] I-35 Shutdown Oct.25th

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-20 19:41:27 UTC
From: Jonathan Kelley
Topic: 30925 Message: 30930

I talked to a lady at Dallas TXDOT Dallas and she said they have nothing listed for this date. I've noticed this sign as well during my commute.

She said I could call Denton County Maint. Supervisor Keith Neighbors at 940 387 1324. I called this number and a lady answered, Keith was unavailable. She said they don't have anything listed for the 25th. I've confirmed the blinking signs on 35E. I'm pretty sure it's on the date listed. I asked if her office in particular lights these signs up with the messages, and she said they do directly control that section of signs. She said a lady named Carlet handles the actual signs but she wouldn't be available today but should be the rest of the week.

It's pretty odd they are bringing signs online notifying closures yet have no record that they have done so.

From: Andrew Tucker
Topic: 30925 Message: 30931

Kinda dumb question, but is it possible the signs have been hacked? Ive seen articles before about signs being made to say "BEWARE ZOMBIES AHEAD" could someone have done that here except used an authentic looking message?

Doubtful,

The ZOMBIE ATTACK hackings were those construction signs that are on trailers. They have an access panel that usually has a default password on the inside and a qwerty keyboard. (Let's just say I like to research things and read 2600.)

Anyway the TXDOT signs, I forget the brand but I've done a tad bit of research on their technical operation. They don't have antennas on them so I doubt they are controlled via RF. I believe they have a landline, either Ethernet or telephone based. They do have control panels on the sides but they are probably for circuit testing rather than actual sign message programming.

Most are on fiber - same system that serves the TxDOT cameras.

Considering we're talking about a governmental entity here, I'd strongly consider Hanlon's razor before considering the system had been hacked.

Another 2600 reader -- who'd a thunk it.

Anyway, I believe they have a landline to the signs -- probably a leased line and not a dial-up. Still hackable, but more difficult. On the other hand, the new electronic billboards seem to have a microwave link -- hmmmmm.....

I've seen things on the TXDOT traffic website that were not there, so its possible the signs maybe correct and some folks at TXDOT doesn't have it on the the site.

Date: 2009-10-21 14:08:17 UTC
From: David J
Topic: 30936 Message: 30936

Please pass on to anyone interested, include in your event calendar, community calendar and announcements:

Any one interested in communications for disaster relief, emergency preparedness, family activity, experimentation, fun....here is an upcoming FREE class.
All Volunteer Organizations Active in Disaters (VOAD) and Dept. of Homeland security partners such as CERT, National Weather Service, various offices of emergency management and so forth have an interest in amateur radio volunteers, not to mention it is a fun technical, fraternal, family, Scouting and Explorer organizations and/or competitive hobby, too.

Oct 31, Nov 7 in Azle
8:30am - 5pm both days.
Bring your own lunch, snacks, note-taking equipment and CAN-DO attitude.

Please RSVP by email to kb5ylg@...

More info below, or at http://www.wc5c.org

Subject: Ham Radio Class

Greetings one and all!!!

What a busy month we have had! And highly successful…..

This is a reminder that those of you who have wanted to obtain your ham radio license,there is a Ham Radio class on Saturday Oct 31 and Nov 7 from 8:30 – 5:00 at Silver Creek Baptist Church; 151 RUTH LANE, AZLE

Ruth Laneis 2.8 miles south of Azle on FM 730 South.
From FM 730, exit onto Veal Station Road .
Ruth Laneis the first street to the left after you turn.

Lunch is on your own so you can either bring a sack lunch or quickly run and pick something up. Plan to bring snacks as well if you need something in between meals.

David Johnson will be the instructor and it is free of charge. The only fee will be $15 for the license on the second day when you take your test. I plan to attend and become a card carrying HAM RADIO operator.

You will need to bring paper and pen for notes and a CAN-DO attitude!

If you missed the opportunities to sign up, you still have time. I have the following individuals signed up (in addition to me): John Engels, Jeff Harper, David Reeves, and Lisa Webster. Please let me know if you wish to participate.

Have a great week!

A little late but you could have got a fairly good view of them from the Cableas.

I know they were flying right over my apartments all day, I live just south of the airport.

from: http://groups.yahoo.com/group/carmachicago/

Courtesy of Sandy WB2MBV at the SEFLORIDA list...

APCO International has released a draft copy of it's "Proposed Standard Channel Nomenclature for the Public Safety Interoperability Channels".

http://apcointl. org/new/commcent er911/documents/ APCO-NPSTC- ANS-1-104- 1DraftPRC. pdf

(http://apcointl. org/new/commcent er911/documents/ APCO-NPSTC- ANS-1-104- 1DraftPRC. pdf)

This standardizes the channel names for the interoperability frequencies. The document also
provides a complete list of the frequencies. Chart starts on Page 8.

Brian and group -

There was some dicussion of this recently in the RR forums. A monitor had heard both analog and digital traffic on the common car/car frequency of 151.355 CH 5. The monitor stated in some communications - base was in analog, and mobile in digital, so go figure. Sounds to me like conversion is in the works. But as we all know, government moves slower than pond scum through a culvert, so God knows when we'll see a FULL changeover.

However, I (and I'm sure others) would love to get any NAC's "should" they be captured while listening....:)

This should be interesting as my repeater site is at lake grapevine and
the main tenant of the tower is TPWD. The repeater is *ANCIENT*. Its a
motorola micor. I suppose if they are deploying new equipment, I will be
the first to know.

I forgot about that. I've been in that shack too....:) It IS ancient.
That's the 159.270 repeater. Curious - when I was out there, and you were working on the ham and CERT stuff - I heard several transmissions on the PWD radio. How is Austin accessing or the mobile here acccessing? telephone line? How does it work? So when the mobile unit on the lake here transmits, I assume it opens the speakers down in Austin? Right?

This is the greatest mystery ever. There are no phonelines or other
connectivity to that shelter. I can only *assume* that austin has a 800'
tower and can hear the output of that repeater. Its only putting out 75
watts from the duplexer so it must be one hell of a receiver down there.

Jay

Perhaps multiple repeaters to span the distance? They don't have a microwave dish on the tower, do they?

Whever I hear Austin on the Palo Pinto County repeater they are weak and have a squelch tail just like the mobiles. That tells me they probably have a VoIP link from Austin to control stations at the local TPWD offices. I know there is an office in Haltom City and I think there is one in Garland.

Today I heard a strong P25 signal on 419.750 in N Fort Worth (Meacham airport area).
It was a repeater and since I only have a BCD396T I could not determine the NAC and did't catch enough to ID anything.
I don't recall this one listed anyplace.

From: Brian
Topic: 30952 Message: 30954

Interesting catch Tom. I have no record of ever hearing anything on this frequency. I thought it might be an input to NASFW or FMC Carswell, but if it is I don't have it still. I wonder if it could be a secondary channel at the US Mint off of Blue Mound Rd/FM 156?

Brian
Ft. Worth, TX

Subject: [dfwscan] 419.750 P25 Fort Worth

Today I heard a strong P25 signal on 419.750 in N Fort Worth (Meacham airport area).
It was a repeater and since I only have a BCD396T I could not determine the NAC and did't catch enough to ID anything.
I don't recall this one listed anyplace.

Tom

30955. RE: TP&W Going Digital?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-24 07:12:29 UTC
From: Brian
Topic: 30942 Message: 30955

Thanks for the info Blaine, Jay, and Russ. I'm going to duplicate my TP&W frequencies in my BCD996T and make them "P25 Only" (still haven't been able to get an XT yet :)).

I've heard a few transmissions (analog) on the 159.270 repeater in the last few weeks. I think it may be Lufkin coming through but I'm not sure yet. The transmissions weren't very clear.

Thanks again guys...

Brian
Ft. Worth, TX

> them going digital yet?

Brian and group -

There was some dicussion of this recently in the RR forums. A monitor had heard both analog and digital traffic on the common car/car frequency of 151.355 CH 5. The monitor stated in some communications - base was in analog, and mobile in digital, so go figure. Sounds to me like conversion is in the works. But as we all know, government moves slower than pond scum through a culvert, so God knows when we'll see a FULL changeover.

However, I (and I'm sure others) would love to get any NAC's "should" they be captured while listening....:)

Some Alliance Airshow Freqs confirmed Saturday:

Airboss - 120.825
BA Comcart - 139.8150 NFM
BA Comcart B - 142.6150 NFM
BA Showbox Diamond - 284.250
BA Diamond - BA Solos - 237.800
BA C-130 Fat Albert - 305.500

Hope this helps...

D/FW FBI used to use 419 MHz links to link their VHF repeaters. Like the Dallas to Fort Worth link. It's been a long time, but that's how it was done ten years ago. Of course, usages change, so it could be something entirely different now. Still a good catch.

After reviewing today's transmissions, this sounds like the tour guides for Printing and Engraving. I can't think of any other federal users in the area that would have a visitor's center. Anyone else?

Yeah, after Tom initially posted and said it was in North Fort Worth, my first thought was the BPE facility there, but didn't want to jump the gun.

I'm way to far away to hear ops from there now, but I was thinking something in the way of a CH 2 to supplement the 415.875 main channel.

Good work Ben.

Hi all -

Just wanted to let everyone know that my web page is no longer. I am no longer a customer of Verizon (for right now), and that is who I had it with. Hopefully at some point, I might be back with another page. I hope those that used it, enjoyed the links and such. Unfortunately, before I canceled my account with them, I forgot to back up all the links. I know, I know, stupid stupid...so anyone that perhaps has a big list of those links please send my way, that is if you have them....otherwise, I'm sorta' screwed. Thanks for all your support of the page.

I'm hoping maybe a some point it'll show up on the Wayback Machine with all the links.

Blaine

Blaine the 419.75 repeater appears to be much stronger than the 415.875 repeater. You might be able to hear it. There is also another repeater that I hear on 416.825 P25 that sounds like building and plant maintenance. I seem to remember somebody on here posting that it was also BEP but I haven't been able to ID it. It is also a lot stronger than 415.875 (at least at Meacham). \

30974. WBAP

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-10-29 22:54:54 UTC
From: Blaine Brooks
Topic: 30974 Message: 30974

Was sitting here this afternoon trying to figure out the frequency setup now for WBAP traffic that they are back with Metro, and I have to admit it's goofy. The only repeater still used is 450.6125 PL 67.0. 455.800 is used, as well as 450.1375, but it's a crazy setup...at least from a monitor's standpoint...

At the top & bottom of the hours, the 450.6125 repeater is used. The recorded reports at :20 and :50 are recorded at :10 and :40 past the hour on 450.1375. This frequency is simplex and extremely weak (at least for me). Metro moved to new Irving studios a while back. While I get the impression that this frequency probably blasts away in that area, over here in Plano, it barely breaks squelch. The other frequency is 455.800 PL 85.4....which seems to be the frequency Randy Fuller relays info to the plane, but his signal from base is also EXTREMELY WEAK, barely breaking squelch. I know many moons ago when I was working at Metro both 450.1375 & 455.800 were assigned, but 450.1375 was never used. 455.800 used to be the old WBAP frequency for the Dallas side way back when, but the signal was much more powerful then.

Of course, in case no one knows it by now, there are no more traffic helicopters flying around DFW. It's sad. WBAP, KSCS, and KRLD all fly in one plane. Metro is supposed to get another one (plane), but from what I've heard, they haven't yet...

Blaine,

Tuesday afternoon I heard two traffic watch airplanes communicating on 123.025 on the Dallas side. One airplane had a female pilot. Mini-Me Chopper 11 has been out flying around early in the mornings doing traffic stuff. Occasionally I'll hear Scab 4 (also masquerades as Chopper 5) in the afternoons and 8-Ball (Chopper 8) (the only turbine engined news helicopter still flying) but their flying has been cut way back. I miss the good ole' days when you would see seven helicopters over a chase if it occurred during the 5pm or 6pm news shows!!!

The only repeater still used is 450.6125 PL 67.0. 455.800 is used, as well as 450.1375, but it's a crazy setup...at least from a monitor's standpoint...

At the top & bottom of the hours, the 450.6125 repeater is used. The recorded reports at :20 and :50 are recorded at :10 and :40 past the hour on 450.1375. This frequency is simplex and extremely weak (at least for me). Metro moved to new Irving studios a while back. While I get the impression that this frequency probably blasts away in that area, over here in Plano, it barely breaks squelch. The other frequency is 455.800 PL 85.4....which seems to be the frequency Randy Fuller relays info to the plane, but his signal from base is also EXTREMELY WEAK, barely breaking squelch. I know many moons ago when I was working at Metro both 450.1375 & 455.800 were assigned, but 450.1375 was never used. 455.800 used to be the old WBAP frequency for the Dallas side way back when, but the signal was much more powerful then.

Of course, in case no one knows it by now, there are no more traffic helicopters flying around DFW. It's sad. WBAP, KSCS, and KRLD all fly in one plane. Metro is supposed to get another one (plane), but from what I've heard, they haven't yet...

Blaine,

Tuesday afternoon I heard two traffic watch airplanes communicating on 123.025 on the Dallas side. One airplane had a female pilot. Mini-Me Chopper 11 has been out flying around early in the mornings doing traffic stuff. Occasionally I'll hear Scab 4 (also masquerades as Chopper 5) in the afternoons and 8-Ball (Chopper 8) (the only turbine engined news helicopter still flying) but their flying has been cut way back. I miss the good ole' days when you would see seven helicopters over a chase if it occurred during the 5pm or 6pm news shows!!!

Mark

Well, now I'm hearing that Metro has three fixed wings up. I had heard they had only one. So go figure....

Glad to know that the old unicom is still being used....when I filled in for Monty or Siegel back in the old days, I used to love chit chatting on there....122.775....of course, the chopper pilots on the Dallas side on 23-oh-2 were a hoot too!...

> Mini-Me Chopper 11 has been out flying around early in the mornings > doing traffic stuff.

Not sure who that gal is. Of course, I've been out of the loop and playing catch up, media wise...I thought I heard her doing some shots in the afternoon too.

> I miss the good ole' days when you would see seven helicopters over > a chase if it occurred during the 5pm or 6pm news shows!!!

I do too, my friend. Can't say I'm pleased at all with the new landscape, but it is what it is, all in the name of budget and salary cutbacks. It's sad. DFW has lost many a good reporter over the last year or so. And as goofy as it sounds, there were many a listener (and driver) that looked forward to seeing the Fox 4 and Zebra ships flying over their heads during morning and afternoon rush hour.

Are you sure it isn't bleeding over from 155.4675?
I get that real bad whenever I go up there and have to lock it out, which sucks because some of the troopers and SO used to talk on 155.475 (TX LAW 3) a lot.

I bet that's what it is. Some days I get the same thing on 155.475 from work in McKinney and it seems to coincide with those same days that WF is blowing in, which is not a normal occurrence.

Lately Ive been hearing 660 advise Engines & trucks running to calls that "CPR is in progress, analyzed early." At first I thought it was part of the program where only an engine was sent to medical calls, but Im hearing this message being told to engines that are not on the trial program. Just a few seconds ago Engine 32 was told they had CPR in progress "analyzed early." Any idea what this means?

Talked to SDO at dispatch. This is an operations deal and communications is just saying this as a reminder. His understanding was performing CPR for different lenghts of time before shocking. He didn't have all guidelines.

I'll catch a FF in the field one night and get the skinny but basically a study much like the recent hypertonic saline study. They're trying to get a controlled study where CPR is performed to see what is most effective.

30997. RE: [dfwscan] Analyzed Early/Late

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-08 05:35:39 UTC
From: tvsjr
Topic: 30994 Message: 30997

Funny. I typed "CPR analyzed early" into Google and got all sorts of information, NIH memos, etc. Certainly enough to determine that the terminology is part of ROC PRIMED and figure out what it means.

By the way, ROC PRIMED was halted 11/6/09 by NHLBI as neither protocol resulted in an increase in survivability following out-of-hospital cardiac arrest.

Subject: [dfwscan] Analyzed Early/Late

Lately Ive been hearing 660 advise Engines & trucks running to calls that "CPR is in progress, analyzed early." At first I thought it was part of the program where only an engine was sent to medical calls, but Im hearing this message being told to engines that are not on the trial program. Just a few seconds ago Engine 32 was told they had CPR in progress "analyzed early." Any idea what this means?

30998. Re: [dfwscan] Analyzed Early/Late

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-08 05:48:57 UTC
From: Toby Zidle
Topic: 30994 Message: 30998

The reference is to a research study conducted by the Resuscitation Outcomes Consortium and co-ordinated in Dallas by UT Southwestern Medical Center. DFR is one of the EMS participants in the "PRIMED" study. The study actually stopped enrollment of participants on Friday,so we shouldn't be hearing any more of this.

From https://roc.uwctc.org/tiki/current-studies

ROC PRIMED-stopped

(Prehospital Resuscitation using an IMpedance valve and Early vs Delayed analysis)

ROC PRIMED, a multicenter trial of patients who suffer a cardiac arrest, when the heart abruptly stops outside of the hospital setting, stopped enrollment on November 6, 2009. The trial compared two resuscitation strategies delivered by emergency medical service (EMS) providers to increase blood flow during cardiac arrest. The study's independent monitoring board and the National Heart, Lung, and Blood Institute (NHLBI), the lead sponsor of the study, stopped enrollment based on preliminary data suggesting that neither strategy significantly improved survival. One strategy compared different durations of manual cardiopulmonary resuscitation (CPR) by EMS providers before they assessed whether defibrillation was needed, and the other strategy tested the potential benefits and risks of an investigational device to maintain pressure in the chest during CPR.

A Q-and-A document (pdf file) from http://public.nhlbi.nih.gov/newsroom/home/qanda.htm says this (merely a small excerpt from the file):

"One strategy looked at when to analyze the patient's heart rhythm to determine whether defibrillation is needed, methods known as Analyze Early and Analyze Later. Some EMS providers perform cardiopulmonary resuscitation (CPR) for 30-90 seconds before analyzing the heart's rhythm, and, if necessary, defibrillate to restore the heart to its normal rhythm (Analyze Early). Other EMS providers perform CPR for three minutes before analyzing the heart rhythm (Analyze Later) and defibrillate if necessary. There is evidence that the longer CPR duration helps oxygenated blood circulate more, which may prime the heart to receive the most benefit from defibrillation. Other studies suggest that delivering defibrillation sooner might be more helpful. The ROC PRIMED study found both to be equally beneficial, with no improvement or decline in patient survival rates."

DFR is (was) participating in the "Analyze Early" phase of the study. (I'm not sure whether they were also in the "Analyze Late"

phase, but I think the research protocol did not have the same EMS department participating in both phases simultaneously.)

The VHF/UHF APX7000 would be a good choice.

Seriously, I like the Icom IC-92AD. It's analog and DSTAR digital. Well built, submersible, decent audio, good speaker mics, real metal case. They aren't the cheapest but they are nice units. They also have an analog-only version for less money.

Thanks Jay -- that looks to be more in the price range I would expect. Looks like $189 or so is the street price -- just have to find out who offers the lowest shipping, etc...

Haven't read the manual yet -- can you lower the TX power to conserve batteries? That seems to be a feature on other units. Also, what is the programming for? I figured you just set up a few buttons to hit the various repeaters and you were done.

I reprogrammed the Garland system into my BCD396XT, using ProScan, after Bill's original post yesterday and updated the firmware(twice), but I'm only hearing static when the scanner stops on a talkgroup ID. It displays the active control channel frequency briefly, then displays either 862.825 or 864.425 while displaying the talkgroup, but only hearing static during the transmission.

Wondering if it's me or if anyone else successfully reprogrammed Garland into a 396XT yet.

Steve

31017. Re: [Fwd: Garland Rebanding]

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-11 00:57:42 UTC
From: chancelindsey
Topic: 31014 Message: 31017

I have sucessfully reprogrammed on a BCT15 and BC246T.

The BCT15 was a lot eaiser because I just needed to add a new site to the system and delete the old one. The BCT246T required creating a whole new system from scratch, since it doesn't support sites.

I can't comment specifcally on the 396XT or Proscan but make sure you have the correct system type and you have entered a custom band plan. If you are not seeing an option for Band Plans then you do not have the system correct. Also if you are not clearly hearing the control channel, then you don't have the system type setup correctly. Instead of Motorola 800 Type 2, it must be Motorola 800 Custom.

The following must be configured either directly on the scanner or somewhere in ProScan.

Band Plan Base Freq (Lower) Base Freq (Upper) Offset Polarity Spacing

1 851.0250MHz 854.0000MHz 440 + 25 kHz
2 851.0125MHz 868.9875MHz 0 + 25 kHz

Hope that gets you going.

Subject: RE: [dfwscan] Wylie Standoff

Does anyone know if Wylie has their own SWAT team or does Collin Co SO provide SWAT ops to smaller agencies like Wylie, Sachse, etc?

The standoff in Wylie is still going on. I usually stream Sachse, Murphy, and Wylie, but for right now I have just Wylie streaming at http://mysachse.com courtesy our friends at RadioReference.

Using Win500, I reprogrammed my PSR-500 with the new frequencies along with using the new trunking tables described on Radio Reference. I too do not get anything anymore with the occasional stopping on an ID but do not get any audio. I'm open to suggestions as well.

31022. Medical Helo

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-11 02:31:25 UTC
From: Patrick - Yahoo mail
Topic: 17281 Message: 31022

Are there any protocols in place for selecting which dept uses which medical helo?

Example, garland has an incident working and the units on scene asked the dispatcher to start careflite. A few minutes later ems1 responded with PHI med 2 16 minute eta out of Mckinney.

Few minutes later they canceled the helo and went by ground.

Sounds like they didn't even call careflite to see if they had a unit with a lower eta.

Just curious.

Unless I'm missing something the only change appears to be the control channels. I've changed them in 2 of my 996's and have had the same result.

Well I can say in our department we use whoever is closest. If an eta is too long we will transport by ground to our hospital to stabilize the patient and then they will be flown later.

At N.R.H. it was round robin. We kept a log of which one we used last. From there if the next one wasnt available we went to the next.

Steve,

I reprogrammed my 396XT yesterday as well, & it's working, no problem. Sounds like you may not have entered the custom band plan required, or maybe it didn't save correctly.

I used FreeScan to program mine (sorry, not using ProScan). However, see these notes on the RadioReference Wiki with the band plan, and a short note on entering that into ProScan:
http://wiki.radioreference.com/index.php/Software_Support_for_Uniden_Rebanding#DMA_Scanners

Steve

Thanks for all the replies. It was the band plan that I didn't have correct. I had imported into Proscan from radioreference, but it came in as a splinter system. I changed it to custom and entered the band plan info. Working good now.
Thanks again,
Steve

31038. Any one going to the electronics flea market in Azle this Saturday?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-12 14:10:20 UTC
From: kb5ylg
Topic: 31038 Message: 31038

Just wondering if anyone is going, it is for ham radio but will have plenty of scanner and short wave items and all that. Details are at http://www.wc5c.org. I'm taking some of my older test equipment and scanners up there and some of my ham stuff to sell and swap. I'm hoping to sell off enough to get a mobile general coverage hf outfit.

Anyway, it ought to be a great event for scanner enthusiasts as well as cb and ham types. So are you bringing stuff to sell, or will you be in buying mode?

david

31039. Re:Any one going to the electronics flea market in Azle this Saturday?

I will be there representing the Cowtown Hamfest and I will also have
a table to sell stuff. It is the NCTECH Hamfest.

I will be wearing a pink polo Cowtown Hamfest staff shirt. There will
be several of us there. Stop by and say hello!

BTW: The Cowtown Hamfest is January 15-16, 2010 at the Lockheed
Martin Recreation Association on Bryant Irvin road in Fort Worth.
This is our third year and we are growing every year!

We will have many flea market vendors and several commercial vendors.
Coaxman and Suspender Man are just a couple. All are welcome and
encouraged to attend. Ticket price is $6.00 via the 'net and $8.00 at
the door. We will be giving away door prizes hourly and a grand
prize on Saturday at 1500. If you want a flea market table they are
$20.00 each and included in the price are 2 vendor tickets.

For more information, please go to our web site: http://www.cowtownhamfest.org.

Thanks guys, I'll see ya Tomorrow!

Gary
Cowtown Hamfest Vendor coordinator

31040. Well the deals already got started at NCTECH

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-14 01:54:16 UTC
From: David J
Topic: 31040 Message: 31040

I showed up to help set up, and Austin Amateur Radio supply got ready and opened for business.
I already picked up a dual band HT antenna, a 4:1 Balun, and an ARRL Repeater Guide with thousands of frequencies listed.

I still plan to buy a microphone, and if the price is right a mobile HF rig. I already saw someone else by a radio, too.

I will have a table with the cream-of-the-crop from my junk pile (a few transceivers, antenna switches, test equipment, etc), and I know of several others. It also looks like there are too many door prizes to give out at the end, so they'll probably be giving door prizes all throughout the morning.

Breakfast is 5:30am-7:30am at R&K Cafe, 316 W. Main, Azle. They are open 24 hours, by the way.
NCTECH opens for general admission at 8am.

Talkin is 147.160+ 110.9

Directions: Take Texas 199 west out of Fort Worth to Azle (actually runs northwest).
Take the Main Street exit. Go left across the bridge and onto Main street.
R&K is about 1/2 mile on right.
NCTECH is about 3/4 mile on the right, Azle Community Center.

Goes until noon, then the door prizes.

Stumbled across this page while doing some google searching, etc.
Some excellent info and advice for those that are thinking of making the transition to, or thinking of, purchasing a Motorola radio for the purpose of scanning. Many things to consider.

From: KevinC
Topic: 9 Message: 31043

Quick question, I'll be visiting the DFW area for Thanksgiving and was wondering if the DFW airport system is worth monitoring. According to RR it's all Provoice, but I figured the locals might have different info. Ok, one more question. Has any Motorola 3600 system other than Garland rebanded? More specifically, systems that would need the custom bandplan.

Kevin

Hi Kevin,

About the only thing you can monitor on the DFW Airport system is fire/rescue dispatch. You'll only hear the dispatch side, but you get the occasionally Alert 2, fire alarms, and inbound medical calls.

Besides Garland, I think the only other rebanding completions are Richardson, DFW Airport, and Irving, which are all EDACs.

Have a safe trip, and happy scanning,

Ben

31051. CAP Nets - New Freqs.

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-17 22:49:39 UTC
From: Blaine Brooks
Topic: 31051 Message: 31051

Over on the Milcom list, a guy down in LaGrange GA (Atlanta Metro) has confirmed activity on some new CAP assigned frequencies. He didn't say whether or not the comms were digital, but they are supposed to be.
The activity he noted was:

139.875 CAP Tac 1
141.575 CAP CC 1

He did have PL's on both of these, but I would "assume" that they would be different in different areas of the country. He copied the use of 173.8 & 127.3.

Looks as though the popular 148.150 repeater is still being heavily used.

So something worth checking out here in N Texas, and adding these frequencies in for possible activity.

Blaine

31052. CAP Nets - New Freqs.

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-17 23:45:27 UTC
From: Bill
Topic: 31051 Message: 31052

Blaine and All.

CAP has moved to Narrowband and with that move has also implemented DUAL MODE Radios/Repeaters.
ie: They can [Routine] be Analog with PL Tones or [as Determined by Mission] be P25 or P25/Enc

The PL will translate to the NAC [Scientific Calculator in Microsoft]
ie: 127.3 will use $4F9 for a NAC

The new Channels as they have been found are in a well updated Wiki
http://wiki.radioreference.com/index.php/Civil_Air_Patrol

148.1250 and 148.1500 will remain the RPTR channels, however with New inputs.
148.1250 will become the Primary Rptr now and 148.1500 will be Secondary use

A Great MAP with the Repeater Site [No Freq, PL or NAC] is at
http://www.tx424.com/Files/7-%20%20A%20Tx%20COM%20SAREVAL%20Booklet%20-%20Freqs%20for%20FM%20and%20Call%20Signs.pdf

Any Reference to a Repeater with P-## is the Old channel Plan
Reference with R-## or R-##P are the new Channels.

http://www.txwgcap.org/content/staff_support_comms.htm

Many CAP Wings hold Nightly/Weekly/Monthly NET which is usually the best time to catch the channels [Repeaters in-use]

Carb Ice on takeoff?????

News report excerpt: "The pilot, who was headed to Arlington, told FAA investigators that he was applying power to his Piper PA-34 Seneca during takeoff when the aircraft failed to climb, Lunsford said. The aircraft dropped after reaching about 200 feet in the air, Lunsford said. The pilot has told investigators that the aircraft's nose trim, which controls it, malfunctioned, Lunsford said."

From the looks of the airplane on the news, it appears that whatever happened, he experienced a wild ride. He is lucky to be alive.

OK, what is the trick to hearing the new Garland system? I downloaded the new system of of RR and nothing. Just monitoring the listed control channels in conventional mode, I'm hearing nothing . No data buzz or anything.

Listed control Channels on RR.
0853.5000
0853.4500
0853.2250
0852.8750

I tried some of the other frequencies in conventional mode and heard nothing on those either.

BCD396T
Firmware: 3.01.00

I'm at Forest Lane and Plano Road. Right on the Dallas - Garland Border.

Repeat after me:

Custom Band Plan

Custom Band Plan

Custom Band Plan

You must create the Site with 800 Custum. Not Motorola Type II. And you must enter the Custom Band Plan.

Band Plan Base Freq (Lower) Base Freq (Upper) Offset Polarity Spacing

1 851.0250MHz 854.0000MHz 440 + 25 kHz
2 851.0125MHz 868.9875MHz 0 + 25 kHz

Check out:
http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD396TFirmwareUpdate?sortcol=table;up=#Motorola_800_Custom_Band_Plan_Re

Hope that helps!

If you're at firmware 3.01.00, you also need to update to 3.02.02.

http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD396TFirmwareUpdate

You won't be able to create the system via UASD, so either use direct entry or software that supports rebanding. I used FreeScan.

I need to update my scanners to and bam rght off the bat I am having trouble. I have a bc796d. I just opened up the uniden software that I would normally use and it keeps saying invalid frequency and I have not even done anything. But everything says 0,000. NOT 0.000. I don't remember commas being there before. Maybe this is something in my settings on my computer. Let me check that now that I think about it.

Do you have to program a custom band plan for all rebanded MOTOROLA II systems? I have a 396XT, 996XT, and GRE-PSR600.

I got it working. Thanks to all who helped.

Could it be a little more difficult and time consuming? I have nothing better to do...

Any quick and time consuming tips to get my BC246T to scan Garland, would be great. I'll have to do that one another day. This one took all morning.

Yes on the Uniden models, if *ANY* of the frequencies are a NPSPAC channel. And by any I mean all frequencies and not just the control channel frequecies.

If no NPSPAC channels are used, then you can just use the normal Type II system. NPSPAC channels are in the frequency range of 851 - 854.

For the absolute best overview of rebanding see:

http://wiki.radioreference.com/index.php/Rebanding

Chance (KC5EOK)

Perhaps you have your PC set to the European number system. They use , for the decimal point.

I need to update my scanners to and bam rght off the bat I am having trouble. I have a bc796d. I just opened up the uniden software that I would normally use and it keeps saying invalid frequency and I have not even done anything. But everything says 0,000. NOT 0.000. Michael,

The way I understand it, the fourth decimal place is the key. If all of the new frequencies (the ones in the 851-854.xxxx)have a "5" in that fourth slot, then the custom band plan would not be needed. That's why even though the Dallas Local Govt. system rebanded, the custom plan does not have to be entered. See this thread on RadioReference: http://forums.radioreference.com/texas-radio-discussion-forum/157029-dallas-trs-rebanding.html?

For Plano, if/when they reband, a custom plan will be needed. For example, one frequency is 866.1500. Subtracting 15mhz leaves 851.1500. That #4 slot has a zero, so should require the custom bandplan.

Just taking a quick look, and with the disclaimer that one or more systems could use frequencies (additional or otherwise), as part of the rebanding process, that are out of the 'subtract 15mhz' pattern, it looks like Fort Worth (as noted in the link above) would not need the custom plan, nor would Arlington, Grand Prairie, and the NE Tarrant County system.

Collin County, Lewisville, and ETMC (in this area, the Elmo & Waxahachie sites) also may need custom plans.

That makes it even easier to figure out. Thanks.

Collin County has actually already programmed all their radios for rebanding. I think they are just waiting on Plano and some of the other agencies to catch up. Since a lot of them are implementing new systems next year it may be a while off.

From: chancelindsey
Topic: 21861 Message: 31066

That is an excellent catch. You are absolutely correct. Please ignore my statement earlier about all frequencies between 851 and 854.

The ones that have a 5 in the fourth decmial place are the the original Motorola channels. So they will keep working even on the old BC235.

The ones with a 0 in the fourth decmial place are the "splinter channels" and require the custom band because they use to map to someplace else.

Thank you,

Chance

Here's a link to a Fort Worth Star-Telegram article from 11/21/2009 by Yamil Berard.

http://www.star-telegram.com/local/story/1781063.html

Basically it says all of the cities on the NE Tarrant system and Arlington are going in together to try and get grants to by a new radio system.

I imagine this may be related to the 700Mhz frequencies that were recently asked for.

31068. Weekly FCC grants November 15-21

You know, for a long time these cities on the 800 trunk system can talk to each other if they really wanted to, its called "patching". and what happened to Tarrant 1, or ACU? Grapevine, Southlake, Arlington, Keller, or even Fort Worth, if their comm center was running the same dispatching system, you could patch Southlake's patrol channel to Fort Worths north patrol channel during a pursuit, I believe thats how it works, or they may not have to have the same dispatch system. Heck, that one year when Dallas PD was chasing that 18 wheeler into Fort Worth, Dallas had no way to talk to Fort Worth units, so Fort Worth patched west patrol to intercity (154.950), so when you keyed up on intercity, you were also keying up on west patrol, I though that was cool. So you know, if they really wanted to, I believe the cities have the capability to talk to each other through patching.

Or is all this about money and getting NEW fancy equipment from the government?

And it said in the article having a system that could talk to Houston? One, why would you want to talk to Houston, and two, you don't need millions of dollars to do it, just have them do RoIP or something, heck amateur radio operators don't have a problem in doing it.

I don't know, after reading that article, sounds like they are trying too hard on communications, to where its actually a simple thing, from the way I see it.

I mean from an amateur radio point of view, I can talk to a county 100 miles away on an HT with RoIP, and now with the D-Star system, you can send data and do a lot more, and its all very simple.

But I know amateur radio and commercial radio think differently and see things differently, I guess.

I just cringed when I see all that money going to a communication system. I'm all for reliable communications for public safety. And if thats what its going to cost to get, so be it I guess. I just hope one day they can get it right and sit on it for more than 10 years.

And don't forget, all this is still going to be ran by computers, which run off electricity. And if you have a major disaster, knocking out power, surging power, frying these computers, where does that leave you. I'm sure they have a backup, for a backup, for a backup, I hope. But you still cant beat direct line of site communications. Yeah it has its positive and negatives, so does everything else.

RHB

I see it as the old KISS method too, but no one wants that apparently. Intercity and interagency were a great concept, and still are. VHF is great for coverage. 155.370 was great for point to point. 154.950 is still great for intercity. But everyone loves 800, and wowed by the digital frontier, due in part to the radio dealers. But how difficult is it to have a 155.370 in the console, and when one community needs mutual aid from another, just jump on and say "Plano communications - this is Frisco Fire - we would like to request one of your engines for mutual aid on a brush fire we are fighting on FM 720. Can you respond to help us?".

Funny, and here I thought we were supposed to be discussing scanning the DFW area... you know, DFWScan? Not listening to some halfwit's political rants? Maybe I missed the memo.

Perhaps you should write up a proposal and send it to the head of the P25 working group, FCC, local police and fire departments, etc. I'm sure they'll be wowed by your brilliance and myriad qualifications and finally see the light... low-band Micors for everyone!

Communications systems and their buyers (and users) are politically influenced. You and I both know that. We as taxpayers pay for these systems, but are we really getting our money's worth? We ARE discussing scanning and communications, mergers with cities, and what we are hearing and NOT hearing,... many times due to some stupid government higher ups that probably have never been out on a patrol beat, or on the fireground, and never once considered asking the true user of the radio system how THEY feel. Need I give an example of Johnson Co.'s past woes?

Sorry, but there is always the delete button, should this halfwit's opinions on COMMUNICATIONS TOPICS be too much.

> low-band Micors for everyone!

I don't recall anyone hearing 800 mhz from Southern CA in Texas, but many damn sure hear CHP LO BAND quite a bit. Geez, I wonder what covers better and has been rock solid reliable over the years?....hmmmmmm...We can learn a lot from dinosaurs....

The whole post-9/11 homeland security spending is all smoke and mirrors. It is an excuse to spend money on new toys.

Is that evil? I guess it depends on how you look at tax money being used to buy frivolous crap all over the country. Bush bought Plano millions of dollars in fancy radios. Obama bought Plano several million dollars in wheelchair ramp curb cuts. Which is worse? Personally, I'd like the tax money back in my pocket for both of these boondoggles.

There you have it from someone that voted for the guy, and went to the Republican Texas state convention in 2000.

I think a little thicker skin would help.

31075. Dallas Fire Rescue working a 7 alarm

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-24 01:45:43 UTC
From: hiegtx
Topic: 31075 Message: 31075

DFR currently working a seven alarm structure fire, 4855 Grammercy Oaks Dr, far North Dallas, near the Bush Turnpike & Dallas North Tollway.

This was reported to be an apartment complex under construction, according to radio traffic as I was driving home from work. While it was still at the 2nd alarm stage (maybe 3rd), 806 advised they were backing out of the building until the power could be cut off.

Just called for the third & fourth rescues in the past ten minutes. Parts of the building are collapsing.

Hi everyone,
I am a Broadcast Meteorologist. My on-air radio experience is on WBAP, KSCS, and the old KXOL, plus a couple of very small Christian stations years & years ago.
(When I was on WBAP & KSCS- this was as a DJ - before I was a Broadcast Meteorologist.)
I can upload weather from here to an ftp for automated or semi-automated stations. (This is good for stations who use the National Weather Service office broadcasts for their immediate bulletins - the watches and warnings- but who still also want the local live voice to compliment it. The two work well together.)
If anyone knows of a station (community radio, low-power or otherwise) who is interested in this service, please do contact me off-list, as I need a job.
Thanks everyone!
-Cami McCraw

FINALLY, heard activity on DFR fireground channel 12 465.6375 PL 173.8.
Yep, all these years I had never heard activity on this channel, because I have always lived out in the 'burbs and never been close enough. Well, this morning I heard command releasing the units from the Gramercy scene, and confirmed the use of the 173.8 PL as well, which I was always curious about with the simplex usage. While I could hear command fine, I could not hear units talking back. So I assume perhaps command was in Air 1 or (since it was a 4 story elevated structure) on an upper level, and the signal carried well (I reside in Plano now) - Parker Rd and 75 area.

While this might be a "whoop de doo" for some, for me, it was a first, and rather exciting. I do believe I'll keep good 'ole CH 12 in the scanner after all...:)

Can you respond to help us?".

Blaine

<soapbox>

Ok, I'll agree that it does little good for Parker County to talk to Harris County in the norm; however, as the system expands where do you think that the State of Texas be in the expansion? That's right, right in the middle of it, with the State of Texas, along with the US Government, and the larger metro areas paying the larger percentages which will allow the smaller counties to join the system as well. This will give the State potential statewide trunking coverage for all their units: DPS, TP&W, TXDOT, TABC, etc.

Right now the current system of simplex/duplex/repeater system has a coverage of 96% of the state but does not allow me to talk to my troopers that are deployed to other areas of the state. This means that if I have a trooper in El Paso he can't talk back to Mineral Wells (his home station) in the case that El Paso is "too" busy to talk to him at that time. and that happens quite regularly now. State wide trunking will be great and there is not a system that will allow it except for P25, with its ability to go from one band and back. With statewide trunking we'll be able to talk from Orange to El Paso, from Dalhart to Brownsville, from Weatherford to Houston (in theory); intercity does not allow to have much more than Dallas to Ft

Worth, Ft Worth to Weatherford, Weatherford to Palo Pinto, type of communication with each station acting like a "relay" to the next until the final station to whom the message was intended is reached with a return reply taking the opposite routing. That's why it isn't used any more than it is.

It could be possible for a statewide communication system to be on line today, however only one user at any one time would be possible, just like the ham's UHF link from Houston to El Paso and on into California-I can't remember the name of it sorry (jog my memory Melissa), but that's NOT what we need. (and NO I'm not talking about TCPIP based Echolink.) We need to have the ability to have the ability to have a statewide system that will allow for dozen's to hundred's (or more) simultaneous conversations not just one.

And quite simply (for my money) it can't get here fast enough! And with our (DPS') new communications director it will happen! I don't know when, but it will happen

</soapbox>

Blaine,

You really should cut back on that medical marijuana stuff! Referring to the following statement: "So I assume perhaps command was in Air 1 or (since it was a 4 story elevated structure) on an upper level, and the signal carried well (I reside in Plano now) - Parker Rd and 75 area." Fireground is fireground, no repeaters and mostly 5-watt or less handhelds being used. Range is not too good. Unless you are close to the scene, you won't hear them. Air-One is a Dallas Police Department asset and lends assistance to DFR on major fires and lake rescues. In last night's case Gramercy Command called Air-One twice to check for embers downwind of the fire and any spot fires that they may create. Air-One only communicates with Command on DFR Channel 1, they never go to the fire ground channels as that would add confusion at the scene. At one point Command asked Air-One to take up a Chief to assess the scene from the air but Air-One had to turn them down. Because of weight restrictions in the Bell 206B3, dark night conditions, lack of suitable landing areas and numerous obstructions in the area it just wasn't safe to do so. Remember, DPD provides this service at no cost to DFR and receives no re-imbursement of any department funds. They don't mind at all lending a hand, but would like those really nice, friendly and extremely helpful budget folks (wink, wink!) at City Hall to remember this at budget time!

While this might be a "whoop de doo" for some, for me, it was a first, and rather exciting. I do believe I'll keep good 'ole CH 12 in the scanner after all...:)

Fireground is simplex, and therefore not recorded. When Vincent Davis was killed in a wall collapse during a big six alarm apartment fire at 8th and Plymouth on Feburary 11, 2002, then Chief Abrarra decided fireground comms needed to be recorded. The Radio Shop allocated four talkgroups on the City 800 system and installed 800 Spectras linked to UHF Spectras in all the Battalion Chief Suburbans so the fireground communications could be re-broadcasted and recorded by yet more 800 Spectras installed in dispatch. Well, that worked for about two or three fires then the UHF Spectras (most often tuned to Channel 1) and linked to the 800 Spectras started re-transmitting everything being said on Channel 1 and not the fireground channel in use. Eventually, the Channel 1 comms stopped and now nothing is being re-transmitted on the 800 talkgroups. Apparently, having those fireground comms re-broadcasted and actually being recorded was not that important afterall. Or perhaps it had something to do with vicarious liability, but that is just a guess!!!

The reason you could hear command and not the units in the field is
command was set up in the command van. In the command van they use
UHF Spectra A4 35wt at 45wt. On the rest of the scene everybody is
using a hand held at 4wt. It was a power issue and not a height issue.

210 and 737 match up to Lover's and 75.... The Galleria would be a CH6 element and 720 or 707 I guess would be first due there.

Here's the short story:

3 young B/M's rob person at ATM on Greenville. Cops quickly locate them and foot chase ensued. One perp quickly arrested. Cop injured jumping wrough iron fence. His arm was seriously cut.

Soon after that suspect 2 is spotted and foot chse again. Officer fired on suspect (started like a gunbattle but now it's unclear if bad guy was armed). Bad guy hides in backyard but is located and arrested. He has a GSW to the leg.

Suspect 3 is at large but cops know who he is.

Great listening!

Terry

Yeah, but if you have an elevated structure (as I stated), the signal WILL carry further if you are monitoring the frequency. The difference between firefighters being on the ground floor, or the 40th floor roof of a high rise.

As Rick stated, power has a lot to do with it too, but even at 4-5 watts, depending on your elevation, the signal will carry. I hear some guy on 146.52 simplex occasionally from the Anna area, here in east Plano, and that's like 25 miles to my north.

We have special border operations all the time from Brownsville to El Paso. Troopers go down there for drug/alien smuggling and spend from two to four weeks at a time on patrol looking for drugs (and yes they find them! Some 95% of drug/drug money seizures are never made public.) Other events such as hurricanes pulled almost ½ of the troopers for a couple of weeks to over a month, then there are other ☐events☐ like the bigamy thing a year or so back that ☐pulled☐ troops and therefore taxed communications. You might have heard a few weeks back that Gov. Perry was going to send in the Texas Rangers to help in the border drug war; well the Rangers are a division of DPS and require our radio support as well. (One can☐t become a Ranger unless they☐ve been a regular Trooper first.)

Remember the DPS is a statewide department, not just in a city or a particular county. If it wasn☐t for cell phones we wouldn☐t have contact with our units that become ☐dispersed.☐ SWAT teams, Dive teams can and do transverse the state and need the ability to communicate with locals. This system could/would allow such interoperability.

31101. Programing my 796D Trouble

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-11-25 11:44:53 UTC
From: Jason Simpkins
Topic: 31101 Message: 31101

Ok. Here are the instructions.

I have now flashed it which I had done before. Did it again to make sure. Now I would normally use the software by uniden to program it but I don't see any band plans in there. It says plan 1-whatever on the software but nothing happens. Not sure if I need to update the software. (I might need to) So, I am doing all this using the scanner and not the software now.

1. Select the Trunking Programming mode and the bank you want to change. DID THIS

2. Choose Motorola Type 2 Custom (TYPE2 CUSTOM) or Type 1 Custom (TYPE1 CUSTOM) and press [E]. DID THIS

* For a Type 2 system, choose "SELECT BASE CONF" then press [E]. AFTER DOING THE ABOVE I DO NOT GET THESE OPTIONS AND I AM STUCK ????

* For a Type 1 system, choose "EDIT BASE CONF" then press [E].
3. The scanner displays "SELECT BASE CONF". Choose the Configuration Block Number (1 to 6), and press [E].
4. Use [0]- [9] to enter a new Base (Lower) Frequency, then press [E]. The Upper Frequency is displayed.
5. Use [0]- [9] to enter a new Upper Frequency, then press [E]. The Spacing Frequency is displayed.
6. Use [0]- [9] to enter a new Spacing Frequency, then press [E].
Note: You can only enter within a range of 5 - 100 kHz, and 5 or 12.5kHz multiples.
7. Use [0]- [9] to enter a new Offset Channel, then press [E]. The display changes for selecting the Polarity (PLUS).
Note: If a Base Frequency hasn't been set yet, the setting of Offset will not be accepted.
8. Choose the Polarity (PLUS or MINUS).
9. Press [E] to store the Polarity. The next configuration number is shown.
10. Select the next Configuration Block Number (1 to 6), and press [E]. Then, repeat from step 4.

6. Use [0]- [9] to enter a new Spacing Frequency, then press [E].
Note: You can only enter within a range of 5 - 100 kHz, and 5 or 12.5kHz multiples.
7. Use [0]- [9] to enter a new Offset Channel, then press [E]. The display changes for selecting the Polarity (PLUS).
Note: If a Base Frequency hasn't been set yet, the setting of Offset will not be accepted.
8. Choose the Polarity (PLUS or MINUS).
9. Press [E] to store the Polarity. The next configuration number is shown.
10. Select the next Configuration Block Number (1 to 6), and press [E]. Then, repeat from step 4.

"phase II sync" I believe this tells us that the sites are at version 7.7. Phase II standards aren't set yet, BUT Motorola's interim solution (2-slot TDMA) is supported in 7.7 and is available in the APX series radios. Hopefully no one will implement it ;-(

The APX radios will support Phase 2 at some point, but at this point support for Phase 2 isn't included in the firmware as its still under development. Once it's completed, phase 2 will be a flashport option.

I have a question about rebanding and these scanner updates. I updated my Uniden BC296D but don't understand what it did. Was it supposed to open up some of the 700 MHz frequencies?

Topic: 31079 Message: 31108

John,

For the BC296D, and it's stable mate, the BC796D base mobile, the only thing changed by the rebanding update was updating the firmware to allow the entry of the custom bandplan for those 800mhz systems that require it. As has been pointed out previously, not all of them will need that. An example here in the DFW area is the Dallas (city) Local Government system. The new frequencies are such that even a scanner that is not "rebanding friendly" should still track it successfully.

When the 296 & 796 were introduced, I'm nut sure that 700mhz trunking was much more than a distant speck on the horizon, if even that, so Uniden did not include that band. Their firmware may not allow a new frequency range to be unlocked (like the 'extended frequency coverage' in the Pro-96/2096). Even if it did, there's the question of if the receivers were FCC type-accepted for the 700mhz frequencies. I believe that, in order to add them now, new approval would need to be obtained, if the receivers are even capable of that band via a firmware "unlock". And we've seen on Pro-96/-2096, that even though that 700mhz band can be "unlocked", since the scanner was not designed for it, it still will not trunk track it.

Steve

Thanks for the update. Right off the bat I couldn't figure out what the firmware update even did. Now I know. I'm way behind the curve on this rebanding thing. I've gotten back interested in shortwave and don't turn on the scanner much any more.

According to Radio Reference some 700 MHz systems are coming online in Austin. Right now I don't think I'm missing much.

I'm going wait to see how all of this plays out before considering a new scanner.

Patrick, I "believe" it was an MVA, but in a residential area, so I didn't pay much attention. Heard location of Deer Run or something like that. I've grown to get fairly good with streets now in McKinney since I live up this way. But since it didn't sound like a major road, I ignored it.

Not surprising at all Gary, and its indicative of the decline in credibility of all facets of the news business. It's easier to spend an entire news broadcast up to the weather covering nothing but Black Friday sales instead of important things going on in the community like say for instance the police shooting that happened last night in Oak Cliff. Then again, criminals are not buying advertising time, stores having Black Friday sales are!

Chip Wagonner did some of his best traffic reporting when he was airborne. Now his morning traffic reports are a joke; reporting from the studio using fuzzy TXDOT cameras where most of the time the accident is well beyond the view of the camera. Most of the time these so-called traffic monitoring experts sitting at a desk in a windowless studio remain completely unaware of a major pile-up until police and fire are in the clearing stages, leaving drivers trapped in traffic snarls. You are better off leaving early, cranking up your Sirius/XM radio and taking your chances! If you are able to catch a report, it's the same ole' freeways that really don't need to be reported on anyway because they are always tied up during rush-hour(s): 635 between Stemmons and Town East; I-35 between downtown Dallas and Denton; I-30 between 635 and downtown; and Highway 75 (all of it)! Tell commuters something they don't already know!

I used to listen to the morning traffic reporters on the scanner all the time. They were witty, funny and informative. I stopped monitoring a number of years ago so I have no idea if there is any traffic even left to listen to.

And speaking of credibility; if your station has a reporter giving traffic reports from the studio, don't try to fool the public into thinking the reporter is in a helicopter by adding a helicopter audio track!

Not sure but I've been hearing a P25 CC out here in East Plano on 854.1875. I am not sure if it's related to the one you are hearing Ed. I can't get a good decode on it as it's just too weak out this way so I have no idea what the System ID/WACN is.

I'm pretty sure it's the town of Prosper. They modified their license from GP (conventional) to YP (trunked) public safety, and added new emission codes 8K10F1D, 8K10F1E (P25 transmissions). This was done in late Sept and other things were granted in October. Callsign WQKC298

As far as the White Settlement stuff goes, it is at the water tanks on top of the hill in WS. I watched them hang the antenna and was talking to the tech guys and they told me that it was p25 just like Parker County. I am pretty sure he said that it is 800mhz and also has capability to use the internet for transmissions to Houston and other citied that may join the "group".
Anyway, it was cool to talk to the techs and see the equipment. They were very informative.

That visit was was last week.

Here are the two TGs White Settlement used today. They're all happy about the "new radio system" and they're going way out of the city limits testing their coverage and transmission capabilities. They seem pretty happy. They are going to do some more testing in the morning they said.

Didn't know this, but apparently Plano Narcotics can go encrypted on their channels. 752 talkgroup tonight is getting a workout. I put the 780 into search mode and realized they were doing this. The GRE blocks it out. Which is good. However, it's interesting that they (Plano) sound like they have the capability.

They've had that ability for decades. One DES-XL channel on the system if memory serves.

Interesting. I've heard Plano narcs run ops in the clear before, which would seem to be pretty risky.

Just turned on the scanner to hear that there's a car theft in progress, and the owner is outside with a gun. It sounds like some fun.

I hear them all the time during the day. I usually lock it out as I don't really want to listen to it. But didn't know that they could go encrypted. I know that Richardson Swat can but thought Plano didn't have the capability.

Blaine, when did you move to Plano. Didn't you live like in Fort Worth or something?

Sounds like some sort of rescue and/or EMS helo enroute to the new stadium.
07:26. Command being set up at Wal-mart parking lot.
AFD3 53584, Arlington TRS

I didn't hear the initial dispatch, so I'm not sure what the injury is.
Rescue 8 is though.

31145. FWPS TRS Tower upgrade on City Council agenda

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-04 23:19:31 UTC
From: Ben Saladino(YG)
Topic: 31145 Message: 31145

From the link at the end of this message...

RECOMMENDATION:
It is recommended that the City Council authorize execution of an agreement with Motorola Inc., (Motorola) using Houston-Galveston Area Contract (HGAC) No. RA 01-08 for equipment and professional services to migrate the Public Safety Radio System to the new replacement communication tower located at the Rolling Hills Water Treatment Plant for the Information Technology Solutions Department at a cost not to exceed $496,000.00.

DISCUSSION:
The 2004 Capital Improvement Program, Proposition Five approved replacing four aging radio communication towers. M&C C-23844 dated October 13, 2009 approved the construction of the first tower at the Rolling Hills Water Treatment Plant. As discussed in M&C C-23844, this M&C is to complete the Rolling Hills communication tower. It includes the purchase of the new antennas, transmission line, miscellaneous communication equipment and professional services required to make the Radio System operational on the Rolling Hills tower. This equipment is compatible with the City's next generation interoperable Radio System supporting the P25 digital standard.

The Public Safety Trunked Radio Communication System is vital to the welfare and safety of Fort Worth Citizens. The infrastructure for the radio system includes towers located throughout the City.

The Texas Interlocal Cooperation Act permits joint participation by local governments, states, state agencies and non-profit corporations to use the Houston-Galveston Area Council (H-GAC) Cooperative Purchasing Program. Purchases made by using H-GAC procedures satisfy otherwise applicable competitive bidding requirements.

ADMINISTRATIVE CHANGE ORDER - An administrative change order or increase may be made by the City Manager for an amount up to $25,000.00 and does not require specific City Council approval as long as sufficient funds have been appropriated.

M/WBE - A waiver of the goal for M/WBE subcontracting requirements was requested by the IT Solutions Department and approved by the M/WBE Office because the purchase of goods or services is from sources where subcontracting or supplier opportunities are negligible.

That was an odd one. I tape all of RPD police and at least RFD dispatch (using the freeware vox "scanner recorder"). Ends up being 3.5 - 4hrs of audio a day. I don't listen to it all, just keep it for 14 days or so in case I have to go back and hear something like this.

The address given on the radio doesn't show up on google maps or my 2008 official COR map. I assume they truncated the name of the street from "X Springs Ct" to "X Court"; either that or it's a brand new street. Either way, it was probably up by Breckenridge park. If anyone knows better, pls let me know.

BTW, Fire dispatch for Richardson is decimal 529.

You'd really need to be listening to hear what the sounds are on the Fort Worth PS 1 TRS, but if anyone is, are there any ideas on what causes the noise and channel/TG "bleedover" that has been ongoing the last hour at least. I've heard this at various times through the years. On a scanner, you will hear other transmissions from other TGs on the wrong TGs and an annoying, cycling "squawking" type sound.

If anyone's up and listening, just open up your scanner to search the TRS and you'll hear what I'm talking about.

From: Brian
Topic: 31153 Message: 31153

FWPD has an officer involved shooting, Homicide, Major Case, and the PIO are all enroute at this time. The traffic is hard to read due to the messed up TRS today. It sounds like the perp is a DOA. Central Talk 1/3408 and Central Patrol/3248 are the primary channels being used with Talk 1 being most used now.

Any additional details would be appreciated. There's at least 1 person being taken to the hospital. The DOA is NOT confirmed by me, but it did sound like this was said after the "shots fired" callout calmed down.

I just heard the perp has multiple gun shot wounds and is being taken to the hospital so he must be alive still.

With the messed up TRS, it's hard to get too many details right now.

Many thanks to those that responded on the new NPSPAC for Plano TRS on and off list. The channels are definitely in the radios, from many verified and good sources. A good source also says the RMA channels have been taken out, and not used anymore. Whether or not the associated agencies use these new channels is up to them. Perhaps we'll hear some interagency use at some point.

Subject: [dfwscan] FWPD Officer Involved Shooting

FWPD has an officer involved shooting, Homicide, Major Case, and the PIO are all enroute at this time. The traffic is hard to read due to the messed up TRS today. It sounds like the perp is a DOA. Central Talk 1/3408 and Central Patrol/3248 are the primary channels being used with Talk 1 being most used now.

Any additional details would be appreciated. There's at least 1 person being taken to the hospital. The DOA is NOT confirmed by me, but it did sound like this was said after the "shots fired" callout calmed down.

I just heard the perp has multiple gun shot wounds and is being taken to the hospital so he must be alive still.

With the messed up TRS, it's hard to get too many details right now.

From the information that we got in dispatch looks like they rolled up on an occupied stolen vehicle and then when they approached the vehicle the people inside ran one was shot the other subdued

I was gone after 9:30 this morning but I did set the DVR to record the only 2 news broadcasts in the evening today. WFAA Ch. 8 had a 2 second blip and KTVT Ch. 11 had a decent report and some video. The patient report via MedStar said that perp 1 was shot 3 times in the chest and 2 times in the abdomen. WFAA said the guy was shot 3 times and KTVT had a PD spokesperson saying the officer fired about 6 shots.

Not sure how big a deal it is, but AFD is at the GM Plant paint booth. Sounds like the automatic sprinklers may have done their job. 16:22 They just held a couple of companies, and are releasing the rest.

Topic: 31172 Message: 31172

Been getting conflicting information from several different (local)scanner sites and I know channels 1 thru 7 hasn't changed but I really don't know what all has changed after that.

I haven't seen an FD radio in a while so don't know what the actual lineup is.

If any has the "current" group lineup for FWFD that would be great.

Thanks,

D

31184. [dfwscan] Looking for Scanner, BCD396T

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-12 21:20:40 UTC
From: Patrick - Yahoo
Topic: 31183 Message: 31184

Thinking of buying a used scanner between now and sometime after Christmas.

Hoping that maybe perhaps, LOL someone out there will get a brand new toy and have an older scanner for sale.

From the little research I have done I think the BCD396T will do me just fine.

Now if anybody has any additional comments or info they would like to share please feel free to email me on or off list.

What I am looking for,

Hand held,

Good RX on 800

Trunk Traking

Analog / Digital

Signal Strength indicator (probably not going to find many with that option)

I am a former moto 2-way tech so I have been spoiled MTS, XTS radios and their great battery life, great sensitivity, and good audio.

I am going to start to liquidate some of them and just get one good hand held scanner.

So if anybody thinks they will have one up for sale in the near future please let me know, or if there is a better one out there that might fit what I am looking for I would love the advice.

At the last get together I THINK this was the scanner that I got to play with that I really liked. I handled a couple of them but only one stood out in my mind as being a great scanner, unfortunately I didn't take the 10 seconds needed to actually write down what the model number was. OOPS.

Happy scanning all.

31185. Officer Assist

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-13 12:49:55 UTC
From: billemtp
Topic: 31185 Message: 31185

Did anyone hear the officer assist call in Dallas ch. 3 on C F Hawn around 2356 last night? Supposed to be an officer down call. I heard DSO send 3 units and my scanner went dead. DPD showed 9 elements assigned, but no supervisor.

Bill Anderson

31186. Re: [dfwscan] Officer Assist

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-13 18:37:41 UTC
From: terry@tvssr.com
Topic: 31185 Message: 31186

BS call. Basic disturbance with no cop involved. DPD got it as an assist and I think the story grew to officer down when DSO got it. It was a herd of police at the ole Neon Cowboy but was a nothing deal.

Terry

Pat - I highly recommend the PSR500 or 600 for your needs, coupled with the Win500 software from Don Starr, if you can get your hands on one. The 396 is a great radio as well. U Man developed a hell of a radio there, as well as the 996. It boils down to matter of choice, and what you want as far as features, etc. Some want to go all out on frequencies, talkgroups, and what they can monitor. I personally just monitor a certain bit, rather than the whole shebang, so having a massive dynamic list, etc. etc. is not that important to me. I'm really only concerned with what is around me, rather than something 30+ miles away. As far as digital decode and general audio ability, I think the 500 or 600 can't be beat, unless of course, you have the dough for an XTS5000 Astro, which most folks don't have that kind of pocket change, or the most important thing, access to the, ahem..., keys....for 800 systems.

> I am going to start to liquidate some of them

Please pass along what you are trying to liquidate to the list. The sale of those might make up for the cost of a digital scanner. As you know, they ain't cheap...:)

Good luck and happy holidays!

Blaine

I wouldn't get too worked up over it. According to city council minutes, the first of the member cities (Grapevine and Colleyville) have approved about $13K a piece to hire a consultant to hopefully get grants to pay for the $25M system. So they have to get the consultant hired, get the grants, then contract the system, then build it, then test it. Years away. Maybe by then Moto will actually have radios that support P25 Phase II (the APX is upgradable... of course Moto said the same thing about the XTS5000 then screwed everyone over and said it won't, buy APXs when you need phase 2).

It's a gas leak, broken main..spewing out pretty good. Hazmat 5 and BC 1 on scene. Still haven't been able to get a location for IPN page out. Sounded like Kings Ridge, but can't find that in Mapsco. If anyone hears the locale, please page.

Another member has mentioned I should also consider the PSR-500

I have only had one GRE scanner in the past and I wasn't impressed, however that was over 5 years ago and I am sure they have changed a lot.

So if it does what I want it to do, and someone is still willing to do 2-way trading for a scanner those are what I am looking for.

PSR-500 / BCD396T

Thanks

I wasn't going to post it but since you asked.

MTS2000 800Mhz firmware upgraded for rebanding model 3

MTS2000 UHF low split 403-470 model 2

MCS200 800Mhz firmware upgraded for rebanding, model 2, set up for remote head but I sold the head and cable while the unit was at Motorola for upgrade.

MTS2000 800Mhz hack model 1

MTS2000 UHF low split hack model 1

CDM1550 UHF high split, 450-512, UHF Conv and LTR.

Was hoping to find someone who wanted to get rid of the scanner and do an even swap for some of the equipment. Naturally we will help each other with programming. :-)

That being said however I'm not sure besides unit numbers if anything else will change. Wichita Falls is in Region Five however they still have dispatch responsibility for Wise County
which is in Region One. I'm guessing Ellis Co will still be dispatched out of Waco. Every now and
then they switch things up however. A few years agao Greenville was in the Garland area of radio
responsibility but now it's done out of Sulphur Springs.

31205. RE: [dfwscan] Re: Looking for Scanner, BCD396T

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-15 21:32:25 UTC
From: Patrick - Yahoo
Topic: 31183 Message: 31205

Updated List of equipment,

XTS3000 Model 1, UHF 403-470Mhz, MDC, conventional / Trunking, Analog / Digital

Astro Saber Model 3 UHF 403-470Mhz MCD, conventional / Trunking, Analog / Digital

Vertex VX-800 VHF hi band, w/DTMF keypad.

Plus the stuff below in my original email that I sent yesterday.

Again, looking for a PSR-500, BCD396T, BCD396XT

All 2-way radios have the option for leather swivel D carry cases, speaker mics, rapid chargers, standard and stubby antennas, multiple batteries and I will work with you on programming.

Going to keep radios until I am convinced no body wants to do any trading, then I will start to sell the 2-way stuff.

Thanks.

Subject: RE: [dfwscan] Re: Looking for Scanner, BCD396T

I wasn't going to post it but since you asked.

MTS2000 800Mhz firmware upgraded for rebanding model 3

MTS2000 UHF low split 403-470 model 2

MCS200 800Mhz firmware upgraded for rebanding, model 2, set up for remote head but I sold the head and cable while the unit was at Motorola for upgrade.

MTS2000 800Mhz hack model 1

MTS2000 UHF low split hack model 1

CDM1550 UHF high split, 450-512, UHF Conv and LTR.

Was hoping to find someone who wanted to get rid of the scanner and do an even swap for some of the equipment. Naturally we will help each other with programming. :-)

Topic: 31207 Message: 31207

Hello,

Does anybody know what the frequencies (if radios are used) are at the Eagles Canyon Raceway in Slidell? I am planning on attending some races there in 2010.
I am also looking for the same at the Motor Sports Ranch in Cresson.

Thanks for your help.

Scott

I heard that on 123.35, which is the Hurst plant's tower. I don't know what times they will be flying, but I got the impression they would be at more than one facility. My guess, Hurst, Arlington, and maybe Alliance, but I am only guessing.

Just curious if anyone knows what was going on around 4 in the afternoon (on 12/16) at Plano Inn and Suites near Parker and 75. About 4 patrol cars were on scene, a couple supervisor SUV's, and a couple unmarked. Didn't have the 800 scanner going at the time. Figured it might be drug related, but just wondering.

From: Terry
Topic: 31213 Message: 31213

Found a news TG (at least to me) this morning. Typically Mesquite FD will have units go to Fire Dispatch 2 for roll call on a structure fire. Today they used Fire dispatch 3. This is 144 (HEX 0900).

For what it's worth!

The V-22 just left the Bell Plant, and was headed to the Arlington plant. I believe they're also going to Alliance/Roanoke. Arlington 128.625, 250.2, Hurst 123.35, can't remember Alliance, but I think it's 135.15.

Lockheed FD at FWNAS. PL 167.9. Some lists will show it as 149.235,
but it is definitely a splinter frequency. Pretty boring to listen to,
unless of course, the plant caught on fire. Then..well...that would be some exciting
listening.

From: Blaine Brooks
Topic: 31222 Message: 31222

Not sure if they are training or if it's the real thing...seriously, it's hard to tell...and I've been listened to fire stuff for a long time...:)

McKinney FG1 - sounds like an apt fire on Saxon?

The reason I wonder about real or not is because "usually" FD training is not done on the first primary FG channel but one further up the scale like 3, 4, or 5, etc....at least from my experience.

Blaine

Just wondering if anyone on the list monitors military SATCOM on a regular basis, and if there is anything to listen to (or worthy) to make a future investment in a helical etc. antenna. Personally, I've never heard a peep on any of the fleet broadcast channels, which folks can use for alignment of signals. Guess I just haven't had the right antenna or radio....even at my old house when I had a discone up about 35' in the clear...

I used to pick up the Mir space station when it was in orbit with just an inexpensive whip antenna on my car. Having a scanner in my car was bad enough, but having to explain to people why Russian was blaring out the speaker too some explaining. :-)

31231. Burleson, Texas TRS has "Pumped Up The Volume"

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-20 01:00:13 UTC
From: kc5rhb
Topic: 31231 Message: 31231

A couple of days ago I guess Burleson PD was having radio problems (again). I caught the tail end of it but someone, dispatcher/officers were having trouble hearing each other, I don't know. Then you would hear all this "scratchy" noise, almost like an open squelch. Then one of the dispatchers consoles had a stuck mic on OPS 1 and they couldn't get it unstuck so everyone went to OPS 2.

Well I guess DFW Comm came out and worked on things and I guess pumped up the volume on the repeater side.

I know on a lot of the TRS I listen to, the volume on the TRS side is a lot lower then a conventional frequency. And every now and then when listening to a TRS and conventional on the same bank, and a conventional channel has traffic, I always have to turn the volume up a little compared to the TRS side.

NOW, Burleson PD is extremely loud, pretty much matching a conventional frequency. I didn't know that you can actually turn the volume up on the repeater output and not have to mess with the radios.

BUT, the FD side of the Burleson TRS is still the same on volume. So when PD talks, and then when FD talks, I have to turn the volume up to hear FD and back down when PD talks.

So someone needs to go turn the FD volume side of the repeater up.

Just wanted to pass that along for those of you who might listen to Burleson PD and wondering if PD sounds louder than usual.

Happy Scanning,

David, KC5RHB

31232. Re: [dfwscan] Burleson, Texas TRS has "Pumped Up The Volume"

From: Myles Barkman
Topic: 31231 Message: 31232

Probably just replaced the mic and/or adjusted the volume at that console.
If they messed with the repeater, the volume increase would be across the
board.

From: kc5rhb
Topic: 31231 Message: 31234

Ok, well its just weird because everyone on the PD side (mobiles, HT"s) are LOUD, not just the dispatcher. Don't know, but I could tell the difference.

31235. "Pumped Up The Volume" - Richardson

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-20 03:04:06 UTC
From: Tim Johnson
Topic: 31231 Message: 31235

Speaking of system volume. Is it me or is the Richardson system volume very low?

I frequently monitor the Richardson, Plano and Garland TRS systems.

If I set the volume for comfortable listening of Plano and Garland, I can barely hear Richardson.

If I readjust for Richardson, Plano and Garland blows the doors off the car.

Tim

Oh this is so true. I was over in Richardson recently and my volume was way up in the truck but the volume was low. I was like great my amplified speaker is going out. I was banging on it and trying to figure out what the problem was. But then I finally turned it to Plano about an hour later and it was loud loud. So, yeah Richardson is very low.

31237. Re: Burleson, Texas TRS has "Pumped Up The Volume"

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-20 05:51:44 UTC
From: kc5rhb
Topic: 31231 Message: 31237

Well Ill make this last statement. I have the scanner volume set on the PD side on scan, and when FD tones out I can barley hear them, to where before, the FD tone would always be loud, louder then the PD transmissions, now PD is louder. But its weird, PD sounds like its almost like its being simulcast, its that the right saying, then you normal clear transmission. Even when they let off the mic on the mobiles and you will sometimes hear that mic click, now you can really hear that mic click when they let off the key, , almost like everything has been amplified on the repeater side. But I know Im not going crazy. Before DFW comm messed with everything, both PD and FD had the same volume, now PD is loud, oh and also it sounds like there is a more "treble" sound in the transmission. But like I said, its not just the dispatcher, its the mobiles and HT's, and to top it off, they already have this one dispatcher thats loud and and eats the mic, man, shes making the speaker crackle now...lol. Must be a TRS thing, I dont know.

Happy Scanning to all, and to all a good night ;)

Two immediate thoughts come to mind...

Where is the freakin' fire extinguisher in all that mess?

That POS car would be sooooo easy to break into, and rip off all
that wonderful radio stuff...:)

Did I say that?....

I'm just picturing him (yes, it has to be a man, no woman would be
that stupid) driving over a speed bump or getting in a crash. All of
the flying radio gear would probably kill him.

Its all a question of priorities mixed in with a stong dose of excessive compulsiveness. Like the dude in Oak Cliff earlier tonight that got car jacked on Ann Arbor near the VA Hospital. He was cruising with the fellas in his 1993 Mercury Marquise regaled with 24" rims, blue lights under the undercarriage, and a DVD movie system complete with mulitple monitors for each passenger. 2K in rims and 1K in the DVD system, all in a ride worth about $500.00. Gotta love it!

Don't know if this has ever been posted. Towards the end of the year I usually reprogram radios and scanners with updated information, or whatever for the new year and the next storm season. So I thought, hey, Ill add the Interoperability Channels in, you know, just in case or whatever reason.

This guide will give you a headache. I know its National, but man, no wonder everyone is confused. Look at all the channels, and I bet still not every agency can all talk to each other.

Whats wrong with the TX LAW, TX FIRE, and TX MED being like the only frequencies to use nationwide (for example). I know when it comes to ICS you have your structure, Incident Commander, Operations, Planning, Logistics, and Finance, but man thats a lot of frequencies to keep up with.

Well, need to find an empty bank to put all these in. I guess I'm not missing any action come 2012..LOL

Happy Scanning,

David, KC5RHB

Typical DHS. The DHS, for all its hype, is only 150 or so folks in a basement office far away from the White House. They are given the responsibility of coordinating 40+ Federal agencies, but no real authority over them in order to enforce the coordination. The "big muscle" agencies like the FBI and CIA have more political clout than the DHS, and can do as they desire. The result is a mess--another Federal Agency with almost no power and headed by a NON-cabinet level leader. I'm not surprised they have done very little to prepare the nation for disasters. About the only thing they have done is to take away FEMA's ability to deal with natural disasters, which occur all the time as opposed to the rare terrorist attack.

Our country's "Chicken Little" views on the extremely rare terrorist attacks has left us with shields down as for as mother nature goes--she can kick our butts any time she wants. Crunch the numbers and Katrina tops all the terrorist attacks on US soil in the past century as far as disruption of lives and economic impact! The 1900 Galveston hurricane trumps all the lives lost to terrorist attacks on US soil in our Nation's history; excluding the Civil War of course.

Well, that sure is interesting because they are following homies through the hood fo sho...and they are definitely doing something...cause they are always referring to "the deal" going down. In fact, they are taking down some folks right now as I type this. Maybe they ain't druggies and pimps, but they is bad mama jammas. Maybe they are concentrating more on the violent crime stuff, cause there is plenty of that. Perhaps we need another description of WHAT EXACTLY PATROL DEPLOYMENT DOES...Personally, I've heard units jump back and forth between 460.400 and the 800 system, or "so it seemed".

> There is no Vice and Drugs occurring in Dallas on
> the weekends, or at
> night, or those units would be working I'm sure!

WTF? That's like saying news ends Friday night at midnight! So you're sayin' there ain't nobody buying drugs in the hood, or looking to get laid along Harry Hines, Royal, or Northwest Hwy. on Saturday night? I find that quite astonishing, and would beg to differ immensely. Cause there is definitely some ho'in goin on....and not just that area of the city....there are also plenty of drugs. Those two things NEVER stop, in any big city.

Blaine

31257. Phone conversation on DFR Ch 1?

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-23 18:52:47 UTC
From: Andrew Tucker
Topic: 31257 Message: 31257

660 just dispatched something, but it was completely unreadable because of what sounded like a cell phone conversation with some lady talking about deciding to break up with her boyfriend. Just wondering if anyone else heard it.

The latest version of that manual is 1.3 May 2009.
<http://www.npstc.org/documents/NIFOG_1_3.pdf>

In case anybody doesn't already know, all the Texas and federal
interoperability channels can be found here in tables that are easy to
cut and paste into programming software, etc.

<http://www.radioreference.com/apps/db/?aid=899>
<http://wiki.radioreference.com/index.php/Common_Public_Safety>

Gee, I hope they didn't add any more frequencies (channels).

"Hey Joe, go to VCALL, I mean UCALL, I mean VUTAC, I mean CALLUVTAC, I mean, IRLEVUCALL, ah hell just call me on the phone"..lol.

Did you notice, on the version I was looking at, there was no mention of any amateur radio frequencies, even the calling frequencies. But they had FRS/GMRS, MURS, and hell, even CB.

Oh well...everyone stay safe out there traveling in the next 24hours. I guess its time to monitor those TXDOT frequencies and see which one are still active.

Happy Scanning,

David, KC5RHB

31264. I'm Back

Yahoo group: dfwscan (2008 — 2009)
Date: 2009-12-24 06:02:49 UTC
From: Cliff Pearson
Topic: 4763 Message: 31264

Hey Everyone!

I'm back! Remember me? I'm back from Tyler for a while, where I was in school studying, and living in Dallas with a relative until mid January. I brought my scanner with me and I'm re-acquainting myself with the crime, corruption, and civil chaos that makes Dallas/Ft. Worth such a fun place to live. LOL.

From: hiegtx
Topic: 31265 Message: 31266

Dallas Streets operations are on the Dallas City Local Gvt Trunked system:
http://www.radioreference.com/apps/db/?sid=18

For NTTA, I believe the last time this question came up, somebody posted that they used Nextel, so if true, that would mean they would be unmonitorable.

Not sure about TxDot, haven't tried to catch them in quite a while.

Went by the scene of the Christmas morning 2 alarmer house fire in Flower Mound about three hours after it had happened. Everyone had left, fire scene tape was up. Very sad. Huge house on Lavon Dr right off Dixon. Hardly anything left but a brick shell. Street was a mess. Looked like they may have had some problems with flying embers. Would have taken some pics, but didn't think it appropriate at all with people (possibly family members and friends) mulling around, and of course, it being Christmas Day.

I observed a demonstration of this ammunition at a local gun range and was actually impressed with the product and after personally talking with the factory representative about the research and development performed prior to production it made me believe that maybe somebody has put some thought into ammunition for personal defense, not directly aimed at law enforcement.

During the demonstration, they were shooting through heavy outer wear type clothing and it penetrated deeply into the ballistic gel each and every time.

Watch this video, it is interesting. just click on the link below:

From: Bill
Topic: 31252 Message: 31274

States always do/will continue to have their own Regional or State Interop
Channels.

The guide was/is the begining of moving all to a common platform for channel
naming, which will help
during the next Big-One or even local event with Agencies from outside of
the area.

Too bad the guide doesn't help with accents :)

Hey, been on here for a while as a lurker. Have a Pro-95 which was great for Garland until 11/01. Did a little research and found the Pro-162 could be used for a rebanded system, so I got one off ebay pretty cheap. I downloaded ARC160 (free trial, I'm cheap) and put in to bank 0 the new control channels, put in the talkgroups, uploaded, updated the custom 800MHz CH PLAN with 851.0250 (lo) 854.0000 (hi) 440, 25Khz step for plan1 and 851.0125(l) 868.9875(h) 0, 25khz step for plan 2. I then did a scan and hear what I think is only some of the traffic. I do see it stop on both the 0 and 5 channels, but I'm not hearing everything. It will be silent for a few minutes then I will hear things like 'in the area', or something along the lines of what you would expect to hear as a response, but I don't ever hear the first part. Or I can hear a dispatch of Fire but never hear the response from the company.
It also seems to want to delay on the control channel, in comparing it to the pro-95 for Plano, the 95 would scan until it hit traffic, the 162 seems to scan then pause at the control channel (866.6500 now) for 2 or 3 secs then scan again. Not bad until you have them side by side and see the 95 picking up channels the 162 isn't or picking them up late. I tried swapping antennas with the same result. Anyone out there using a 162, is this normal, and/or have garland working better than spotty with it? I thought I had everything set up correctly, but new to the 162 so I may have missed a few dozen things. Thanks.

Here's a Radio Reference link that mentions the reband custom tables.
http://tinyurl.com/yfqvule

I can't help anymore than that as I'm not that versed in this stuff. ;D

Can someone tell me if this is valid?

News Update Posted on 2004-01-07 03:03:24

859.9375 is now being used as a voice channel on the system according to trunker.

It's an old update, but it's showing up on the RR page, yet that frequency isn't one of the listed frequencies, so ???

Just an observation.

Thanks,
-IQ
